acquainted in that region, was approached for the same purpose. Roy consented to look over the applications and vouch for those whom he might know. Webb accordingly brought him the roll. After an examination of the same, he informed Mr. Webb that none of the parties were entitled to scrip under that treaty, and he would have nothing to do with the applications. Webb requested silence upon Roy's part, and took the roll away.

Two of the applications purporting to have been executed bear Chapman's name as an identifying witness. A comparison of these signatures with those that are genuine show an attempted imitation only. He himself declares he did not sign them. Gurnoe says he did not. Who then did? It is not necessary for us to express any opinion. The applications referred to are those of William Herbert and Catherine Herbert.

Again we invite your attention to five pieces of scrip issued to Andrew, Francis, John, Augustus, and Margaret Chenguay. These were issued by the Commissioner of Indian Affairs, without any applications being filed, and without any knowledge upon his part of the real claims of the parties, and only upon the personal application of Agent Webb. These parties are all full-blooded Indians, without any admixture of white blood, as the affidavit herewith filed of Augustus, Francis, and John Baptiste Chenguay affirms, and is also well known to all the people of Bayfield and vicinity. Augustus Chenguay makes oath as follows:

STATE OF WISCONSIN, *County of Bayfield, ss:*

Augustus Chenguay, being first duly sworn, says that he is a pure blood Indian, without any admixture of white blood; that some four years ago Joseph Gurnoe called him into the office of General L. E. Webb, Indian Agent, and, taking me to one side, and wanted me to sign papers in reference to half-breed scrip, saying I was entitled to it; and offered me \$20 if I would do so. I refused; went home and asked Mr. Moulferrand, the school-teacher, if it would be right. He told me it would not. After that I told Gurnoe not to bother me any more about it. I never signed any paper in reference to this scrip. In the same conversation Gurnoe told me that Francis Chenguay, John B'te Chenguay, Adam Chenguay, and Madeline Chenguay, my father, brothers, and sister, were all entitled to this scrip. I advised them all to have nothing to do with Gurnoe concerning it. (In speaking of them Gurnoe used their Indian names.) There are no other persons by the name of Chenguay connected, related, or belonging to the Chippewas of Lake Superior or Mississippi.

AUGUSTUS <sup>his</sup> CHENGUAY.  
mark.

Sworn to and subscribed before me, this 22d day of July 1871, at Bayfield, Wisconsin.

S. N. CLARK,  
*United States Indian Agent.*

Accompanying this is the affidavit of Vincent Roy, jr., and Henry Blatchford, two of the most intelligent and conscientious of the half-breeds of the Lake Superior, as to the character, blood, &c., of said Augustus Chenguay.

Mr. Webb seems to have forgotten the Christian names of two of these parties, and substituted Andrew for Adam, and Margaret for Madeline. In manner thus set forth as above, Webb secured 199 pieces of scrip, which was disposed of by him to other parties, from whom he received \$2 50 per acre, and one-half of whatever might be realized from the same, over and above that sum. On each piece he realized in any event not less than \$200, while all expenses in procuring it did not probably average \$25.

About the time of this renewal of this business at Lake Superior, a similar movement began at Saint Paul, Minnesota. The new construction of the treaty was again put to its utmost stretch. Applications of any mixed-bloods of the Chippewas, without reference to their bands or

residence; husband and wife each being considered the head of a family, some persons whom we are advised had received Sioux scrip, and in two instances, white married women, Mrs. Julia Cormick and Mrs. Lilet Chournand, of Little Falls, wife of Peter Chournand, who also applied for scrip, were all induced to make application. In this way about seven hundred and fifty-six applications were taken, as will appear from examination of Schedules C and D accompanying this report. There will be found in this schedule four instances, numbers —, in which duplicate applications were filed for each individual, and the scrip issued thereon. This fraud was successfully accomplished in two instances by the insertion of the initial letter F for a middle name. Three of these parties, the fourth being dead, themselves certify that they have no knowledge of this "repeating," and never received any gain or profit therefrom. We have been able to trace but one of these pieces of scrip, and that was in the hands of W. P. Dole, late Commissioner of Indian Affairs.

Most of these applications were by mixed-bloods of the Chippewas of the Mississippi and Pillager bands, and by such members of the Pembina and Red Lake bands as were residing in the vicinity of Saint Paul. We have the evidence of these persons who signed certain applications as witnesses, that they have no knowledge of or acquaintance with J. B. Bassett, late United States Indian agent, and yet the applications have the certificate of late Agent Bassett; that he is personally acquainted with the parties, and that their statements are entitled to full credit and belief. One of the attorneys who did the principal part of this business in Saint Paul and vicinity was Isaac Van Etten, of Saint Paul. With a large number of the applicants he made an agreement to procure their scrip, and charge them \$20 for his services, or retain it, paying them \$40 for the same, thus promising to pay them the sum of 50 cents per acre, while at the same time he knew the scrip was then selling in Saint Paul at not less than \$3 per acre.

For the amounts actually realized by the mixed-bloods for their scrip we refer you to the statements of sums paid, appended to Schedule D, and to the affidavits accompanying that schedule, numbers 1 to 49 inclusive, from which we copy as follows:

Matilda Thompson (No. 46) swears that—

I was a married woman September 30, 1854; that I made application for scrip under the treaty of September 30, 1854; made at La Pointe, Wisconsin, through Isaac Van Etten; that I never saw the scrip, but was told by Van Etten that the scrip was worthless; that it could only be laid on some land around Lake Superior, on which I would have to pay taxes, and thereby induced me to sell it to him for \$20.

Peter Brunell (No 4) swears that—

I applied for scrip under the treaty of September 30, 1854, through Isaac Van Etten. When I went to him to apply he said it would be for forty acres. I was on a furlough from the Army. I was a soldier in the Union Army. He then asked me if I wanted to sell. I said, "Yes; what is it worth?" He said he would risk \$20, but did not know whether he could get the scrip. He paid me \$10, and I gave Peter Smith an order for the other \$10, to be paid when the scrip came. This order was paid, and is all I ever received.

Elizabeth Monchaud (No 32) swears—

I applied through Isaac Van Etten about seven years ago, and have never received either land, scrip, or money, nor do I know that any scrip was ever issued. Van Etten told me to sign the paper, but did not explain it to me.

It will be observed, upon examination of the statements appended to Schedule D, that some of the persons were paid by him as large a sum as \$100. They were of the more intelligent class, and knew better how to protect their rights and interests.

The scrip issued upon one of the applications, that of Margaret La Fond, of Saint Paul, and filed by Van Etten, was sold by William P. Dole, late Commissioner of Indian Affairs, to J. P. Wilson, of Saint Cloud, Minnesota.

In the spring of 1865 certain parties, resident of St. Paul and vicinity, determined to visit the Red River country, largely inhabited by mixed-bloods of the Pembina band of Chippewas, and take their applications for scrip under this treaty. As yet no operator had been bold enough to claim that this band, separated from Lake Superior Chippewas by the entire breadth of the State of Minnesota, never within the memory of man having had any tribal relations whatever with them, could be embraced within the provisions for the mixed-bloods of Lake Superior.

Accordingly a notary public, H. S. Donaldson, and an interpreter, went to that hitherto uncultivated field, and made diligent search for the half-breeds of either sex, without regard to marital relations, and often with a disregard to age. After exhausting Minnesota, Donaldson went down the Red River to Fort Gerry, Winnipeg, and other places in the British possessions, taking applications without scruple, and administering the oaths himself, although only a notary public for the State of Minnesota. To prevent the discovery of this fraud he filled the blanks, making the county of Pembina, State of Minnesota, the *locus in quo*. He procured about four hundred and fifteen applications, which were turned over to N. W. Kittson, his employer in St. Paul. These applications, in whole or in part, Mr. Kittson sent to Washington, and on them Commissioner Dole issued one hundred and five pieces of scrip.

At the time said applications were taken an agreement was made with the applicants by which they were to pay \$50 for procuring their scrip, or were to permit Mr. Kittson to retain the same by paying \$50 therefor. If this arrangement had been faithfully observed by Mr. Kittson, and those who became interested with him in said applications, it would have been the most favorable of any made for the half-breeds, and, at the same time, would have been highly advantageous to Mr. Kittson and his associates, for there having been taken over four hundred applications, the commission on the whole would have amounted to \$20,000, while the legitimate expenses could not have exceeded \$5,000. But we regret to say that he has not fulfilled this agreement, and that we failed to find more than two of these mixed-bloods who have received one dollar upon said agreement, although we have reason to believe that there are some others who have been paid in whole or in part, what he promised them.

In this connection we refer you to affidavits of Schedule D. Of these applicants not one, in our estimation, had any right to make any claim under this treaty, they never having had any tribal relations with the Chippewas of Lake Superior.

All the parties engaged in this business at the time the applications were taken also caused the applicant to execute two powers of attorney in *blank*, one authorizing the receiving of the scrip from the Indian Bureau, and the other the selling, locating, or otherwise disposing of the same, and the conveying of the lands located. We are well satisfied that the mixed-bloods signing said powers of attorney, which was generally done by touching the pen once, even if there were a dozen papers to sign, as a general thing never had the slightest conception of the nature and consequences of the act; and that no explanation was made to them which for a moment would lead them to suppose they were doing anything that would prevent them from obtaining the possession of their

scrip. These powers of attorney were executed in blank, and could not therefore by any process of legal reasoning be held to be of any binding force and validity; on the contrary, such instruments have always been held to be without validity and void. In view of the foregoing, the question will naturally occur, how did these various parties succeed in inducing the Commissioner of Indian Affairs to issue scrip in such quantities upon papers which, if not on their surface fraudulent or defective, would have been so found upon a slight inquiry?

We regret to say that we have discovered clear proofs of the complicity of William P. Dole, then Commissioner, in this matter. A considerable portion of the scrip was given to him as a consideration for issuing it, and where an attorney or agent declined to share it with him he refused to issue scrip upon the applications filed. This can be substantiated, if need be, by the oaths of Isaac Van Etten, N. W. Kittson, Franklin Steel, and others.

In proof thereof we have set forth the pleadings of a suit instituted by Dole in the district court of Ramsey County, Minnesota, against one J. P. Wilson, to wit:

District court, second judicial district.

STATE OF MINNESOTA, *County of Ramsey*:

|                              |   |            |
|------------------------------|---|------------|
| WILLIAM P. DOLE, PLAINTIFF,  | } | Complaint. |
| <i>against</i>               |   |            |
| JOSEPH P. WILSON, DEFENDANT. |   |            |

The plaintiff in the above-entitled action, respectfully complaining, shows and alleges that heretofore, to wit: on or about the 8th day of April, A. D. 1867, the defendant entered into, made, executed, mutually with him, a certain agreement and contract, in the words and figures following, to wit:

"This agreement, made and concluded this 8th day of April, A. D. 1867, by and between William P. Dole, of the first part, and J. P. Wilson, of the second part, witnesseth: That the said party of the first part does hereby sell, and at the execution of these presents does deliver, to the party of the second part 28 pieces of Chippewa land-scrip, of 80 acres each, being 2,240 acres, at the rate of \$3 per acre; in consideration of which sale and delivery the said party of the second part does hereby agree to pay for said scrip the sum of \$6,720 on or before the 8th day of October, A. D. 1868; and the said party of the second part does hereby further agree that the said sum of money, to wit, \$6,720, shall be paid previous to the 8th day of October, 1868, out of any moneys that may be collected from the United States by Charles King, the attorney of the said party of the second part, who as such attorney is now authorized to collect from the United States the sum of \$10,000, being the amount of money agreed to be paid to one A. J. Campbell, by the United States, under article 9, treaty of June 19, 1858, Medawakanton and Wahpakoota bands of Sioux Indians, accepted and ratified by the President of the United States March 31, 1859, and which claim was, on the 25th day of August, 1866, assigned and sold to the party of the second part by said A. J. Campbell, and the said Charles King is hereby authorized and directed to pay to the said party of the first part the full sum of \$6,720 so soon as he shall collect the same from the United States as hereinbefore provided, and without further or other instructions or authority, which payment when made shall be in full of all obligation on the part of the party of the second part, and forever discharge the same. It is further understood and agreed that, should the said Charles King fail to collect the sum of \$10,000, as is herein provided, then and in that case the party of the second part shall well and truly pay, or cause to be paid, to the said party of the first part, the full sum of \$6,720, as hereinbefore provided.

"In witness whereof we have hereunto set our hands and seals, April 8, 1867.

"J. P. WILSON. [SEAL.]  
"W. P. DOLE. [SEAL.]

"CARRIE KING."

And that the said agreement is duly stamped 55 cents, and the stamps duly canceled.

And the plaintiff alleges that no part of or portion of \$6,720 was paid previous to the 8th day of October, A. D. 1868, nor at any time since that date, out of any moneys collected from the United States by Charles King, or any other moneys; and that said Charles King has failed to collect the said sum of \$10,000 specified in said agreement,

and every part thereof, of which the defendant long since, to wit, on the 8th day of October, A. D. 1868, and on other days and times between that day and the day of the date hereof, had due notice. The plaintiff further alleges that, under and by virtue of said agreement and contract, he did then and there, to wit, on the 8th day of April, A. D. 1867, sell and deliver to said defendant 28 pieces of Chippewa half-breed land-scrip, representing in the aggregate to 2,240 acres of land, which was worth and of the value of \$3 per acre, in consideration whereof the defendant did then and there promise to pay him, on or before the 8th day of October, A. D. 1868, \$6,720, and that the defendant has not paid the same, nor any part thereof, though often requested so to do. Wherefore, the plaintiff demands judgment against the defendant for the sum of \$6,720, and interest thereon from the 8th day of October, A. D. 1868, at the rate of 7 per cent. per annum, besides the costs and disbursements of this action.

LAMPREYS.

JOHN B. SANBORN,

*Plaintiff's Attorney, St. Paul, Minnesota.*

MARCH 11, 1870.

STATE OF MINNESOTA, *County of Ramsey, ss:*

John B. Sanborn came before me personally, and, being duly sworn, doth say that he is said plaintiff's attorney in the above-entitled action; that the foregoing pleading is true to the best of his knowledge, information, and belief; and that the reason why this affidavit of verification is not made by said plaintiff is that he is absent from the county of Ramsey, Minnesota; where resides this affiant, his attorney; and further saith not.

JOHN B. SANBORN.

Subscribed to and sworn before me on this 14th day of March, 1870.

[SEAL.]

H. R. BRILL,

*Notary Public, Minnesota.*

State of Minnesota, district court, second judicial district of Ramsey County.

WILLIAM P. DOLE }  
*vs.*  
 JOSEPH P. WILSON. }

And now comes the said defendant and, answering the plaintiff's complaint, says that the said plaintiff did not at the time stated in the complaint, nor at the time or before the making and delivery of the agreement in said complaint set forth, deliver to the defendant said twenty-eight pieces of Chippewa half-breed scrip, described in said agreement and in said complaint, and the said plaintiff has not yet delivered the same to the defendant, nor any scrip except twenty-four certificates hereinafter described, and which were delivered on and before the 7th day of June, 1867; and the defendant says that the said so-called scrip was not worth or of the value of \$3 per acre, as noted in the complaint, or of any value whatever.

And the defendant further says, that on and before and for a long time after the respective dates of the certificates hereinafter mentioned, the said plaintiff was the duly-appointed and Acting Commissioner of Indian Affairs under the laws of the United States, and being such Commissioner and assuming to act in the premises under and pursuant to the treaty with the Chippewa Indians of Lake Superior and the Mississippi, concluded on the 30th day of September, 1854, ratified on the 10th day of January, 1855, and without other authority or direction in the premises, the said plaintiff did, as such Commissioner, at the times hereafter specified, make and sign and affix the seal of the Department of the Interior to certain certificates in writing of the nature, character, and form following, to wit:

DEPARTMENT OF THE INTERIOR,

OFFICE OF INDIAN AFFAIRS.

(Date of certificate.)

I hereby certify that (name and residence of the person) is one of the persons described in the provisions contained in the treaty of September 30, 1854, with the Chippewas of Lake Superior, and that the said (name of person) is entitled to 80 acres of land as therein provided.

It is hereby expressly declared that any sale, transfer, mortgage, assignment, or pledge of this certificate, or of any right accruing under it, will not be recognized as valid by the United States, and that the patent for lands located by virtue thereof shall be issued directly to the above-named reservee, or his or her heirs, and shall in nowise inure to the benefit of any other persons, and that the object and purpose of this certificate is to identify the said above-named (name of the person) as one of the

persons entitled to the benefit of the provisions of the seventh clause of the second article of the treaty aforesaid.

Given under my hand and the seal of the Department of the Interior, this — day and year above written.

[SEAL.]

W. P. DOLE,  
*Commissioner.*

That the said certificates were numbered, lettered, dated and issued in the name of and purporting to be for the sole personal use and benefit of the several persons respectively following, to wit:

No. 5. B, of said certificates, dated April 13, 1864, was in the name of, and purported to be for the benefit of Peter Choenerd.

No. 21. C, dated May 11, 1864, in name and for the benefit of Lucy Briddle.

No. 73. C, dated August 25, 1864, in name and for benefit of Bla J. Chapman.

No. 74. C, dated August 25, 1864, in name and for benefit of Charlotte Shaw.

No. 11. C, dated April 20, 1864, in name and for benefit of Margaret La Fond.

No. 45. C, dated June 13, 1864, in name and for benefit of Francis Bird.

No. 42. C, dated June 13, 1864, in name and for benefit of John B. Goslin.

No. 30. Letter and date not known, in the name and for benefit of John B. Gurnoe.

No. 182. C, dated November 12, 1864, in name and for benefit of Joseph Lagarde.

No. 230. C, dated January 14, 1865, in name and for benefit of Michael La Loche.

No. 296. C, dated February 20, 1865, in name and for benefit of Charlotte Bellair.

No. 194. C, dated — 21, 1864, in name and for benefit of Joseph Nolan.

No. 276. C, dated January 31, 1865, in name and for benefit of Archange Beauchamp.

No. 164. D, dated May 10, 1865, in name and for benefit of Louise Saynard.

No. 167. D, dated May 10, 1865, in name and for benefit of Joseph Sayert.

No. 165. D, dated May 10, 1865, in name and for benefit of Peter Sayard.

No. 113. D, dated May 10, 1865, in name and for benefit of Isabella Grambois.

No. 90. D, dated May 10, 1865, in name and for benefit of Joseph Carribeau.

No. 120. D, dated May 10, 1865, in name and for benefit of Edward Harman.

No. 103. D, dated May 10, 1865, in name and for benefit of Joseph Fredericks.

No. 162. D, dated May 10, 1865, in name and for benefit of Francis Ramaille.

No. 92. D, dated May 10, 1865, in name and for the benefit of Angelic Charrette.

No. 173. D, dated May 10, 1865, in name and for benefit of Louis Vivier.

No. 174. D, dated May 10, 1865, in name and for the benefit of Francis Vivier.

Which said certificates are the same things that are referred to in said complaint, and therein called "Chippewa land-scrip" and "Chippewa Half-breed scrip," the above specified twenty-four of which were delivered by the plaintiff to the defendant as hereinbefore admitted.

And the defendant, further answering, says that the President of the United States has never assigned to each or either of the said persons named in the aforesaid certificates or scrip 80 acres of land, or any land, for his, her, or their use, nor have the said persons, or either of them, ever selected any land under the direction of the President, for his or her own use, or for any use or purpose, under the provisions of the said treaty. And the President of the United States did not direct or authorize the making and issuance of the said certificates or scrip, or any of them, and the issuance of the same was wholly unauthorized; and neither of the said persons named in the said certificates or scrip was a head of a family or single person over twenty-one years of age at the time of the making of said treaty, of the mixed-bloods belonging to the Chippewas of Lake Superior, or entitled to the benefit of the provisions in the said treaty contained, excepting Joseph Lagarde, John B. Gurnoe, and Charlotte Shaw; and neither of the said certificates or scrip were ever delivered to the person therein named, nor were such persons, or either of them, ever informed by the plaintiff that he had made and signed said certificates, but he, the said plaintiff, without their consent or knowledge, retained the same and each of them in his own possession and control until he delivered the same to the defendant as hereinbefore admitted, and the defendant is informed and believes, that the plaintiff never paid or gave any consideration for the said certificates or scrip, except his services in issuing and delivering to other parties who were not entitled thereto a quantity of like certificates, all of which was done by the plaintiff in violation of his official duty as such Commissioner, with intent to cheat and defraud the United States, and the mixed-bloods of the Chippewas, referred to in the aforesaid treaty.

Wherefore the defendant demands judgment and costs.

MASTERTON & SIMONS,  
*Attorneys for Defendant, St. Paul, Minnesota.*

STATE OF MINNESOTA, *County of Ramsey, ss:*

Henry F. Masterton, of said county, being duly sworn, says that he is one of the attorneys for the above-named defendant; that the foregoing answer is true to the best

of his knowledge, information, and belief, and that the reason why this affidavit of verification is not made by said defendant is that he, said defendant, is absent from the said county of Ramsey, where his attorneys reside.

HENRY F. MASTERSON.

Subscribed and sworn to before me this third day of May, 1871.

[SEAL.]

W. P. MURRAY,

*Notary Public, Ramsey County, Minnesota.*

We are well advised that the averments of Mr. Wilson's answer are correct and true. Oscar Taylor, of St. Cloud, sent to the Indian Bureau the applications of Alexander Blair, Margaret Blair, Mary Ann Blair, Angelique Trotochand, and Edward Blair. After a reasonable time, not hearing from them, he wrote for information, and received a reply from a clerk in the Bureau that if he would permit the retention of two of the five pieces they would issue on the whole and forward suitable blanks to be executed for that purpose. Taylor refused, and the scrip was not issued.

From 1865 to 1868 no scrip was issued. In 1868 the 310 applications remaining in the hands of N. W. Kittson and his associates were placed in the hands of Franklin Steel, a resident of Georgetown, D. C., to lay before Commissioner Taylor, of the Indian Bureau. The Commissioner issued scrip on all the applications, notwithstanding the fact that many of them were defective in form, as will appear upon examination, and notwithstanding the more important fact that probably not one of the 310 applicants had any claims under the treaty.

This negligence of careful attention to duty has cost the Government in this instance 24,000 acres of the most valuable lands in the Northwest. Commissioner Taylor also assumed the power to extend the provisions of the treaty by indorsing over his signature, across the face of each piece, that this scrip could be laid upon any unsurveyed land in the United States. This scrip went into the hands of Franklin Steel, N. W. Kittson, and Henry F. Wells, who still hold a part of it. This scrip was burdened with the agreement heretofore set out, made with the mixed-bloods, giving them the option to take the scrip or \$50 in lieu thereof; yet, as stated above, we have heard of no instance where either a mixed-blood has been permitted to make his election, or has received any consideration for the same. We are informed, however, that Messrs. Wells and Kittson have employed one Robinson, acting United States vice-consul at Winnipeg, in the British possessions, to make settlement with the half-breeds. They gave this man Robinson \$50, for which he is requested to obtain a warrant deed from these mixed-bloods for the lands located by their scrip. He obtains this deed, of the nature of which they have but a dim conception, for the smallest possible consideration, and appropriates the balance of the funds to his own purposes. Thus does an officer of the Government join hands with those who oppress and defraud the poor and ignorant. In this connection we refer you to affidavits Nos. 1 to 53, inclusive, of Schedule D.

We forward herewith three schedules, A, D, which contain the facts and the evidence taken in reference to the applications thereon enrolled with the accompanying affidavits. This closes our report upon the supplemental instructions to investigate issues of scrip already made.

Referring to our instructions to ascertain who are still beneficiaries under the respective clauses of the treaties of 1854 and 1863, it is proper that we should make some general statements in explanation of what might otherwise be difficult to be understood.

We soon found that the applications formally made out, with identi-

lying witnesses and certified to by a public officer, were wholly unreliable as evidence that the applicant was entitled.

Many parties have made two, three, and sometimes more applications, stating in each that they had never applied before. (See Schedule B and the accompanying applications.) Some white persons have applied; several who were dead at the date of the application purport to have applied, and many persons considerably under the age, as will appear in the evidence we have set out. Generally these applications are witnessed by respectable persons, who in turn are vouched for by some respectable officer.

It was easily discovered, also, that the parties applying did not originally comprehend the averments they made in the application, neither as to age, citizenship, nor tribal relations. The most they generally understood was that if they signed the papers they would get in time something called scrip, which would be of some value to them. We also ascertained that among the identifying witnesses a loose notion prevailed concerning the nature of their averments, and that their certificate very often had little more basis than a passing acquaintance with the parties; and also that public officers often certified, as a matter of form, to parties they had never heard of, and in some instances made out certificates in blank.

Thus the applications before us in themselves furnished no evidence in support of the claims of the applicants. For these reasons we have relied very little upon the applications themselves, but almost entirely upon the personal examination of the party, or, where this was not practicable, upon the examination of those who were personally acquainted.

We have prepared two schedules, B and C, on which are enrolled the names of such applicants as appeared before us by attorney, together with the evidence and facts we have obtained in reference to each case.

How little care has been exercised by these agents in procuring applications, will be seen from the fact that some parties are induced to apply who are found to be very young, while others long since dead are made to furnish their applications for this half-breed scrip. There will also be found on this list the names of many white persons who are generally connected, by marriage, with the Chippewas of some of the bands, and many others still who have never resided for any length of time in the United States. The critical examination of each application, made necessary by their irregularities, has been given, so far as was possible upon our part.

On the first of July we notified the attorneys that we were ready to hear any evidence they had to offer touching the applications they respectively represented, and repeatedly thereafter called their attention to the same matter, but generally we have received little response from any of them, and have therefore been left to make our investigations, for the most part, without their aid.

Schedule C represents the applications filed for scrip under the treaty of September 30, 1854. We have decided these cases upon the principles already stated, viz, that women having living husbands September 30, 1854, and all persons who had not, some time during their lives, a personal connection, in other words "did belong to the Chippewas of Lake Superior," are not proper claimants. On this principle we have rejected the applications of all mixed-bloods who are connected with the Mississippi and Pillager bands, and the Pembina and Red Lake bands, although their fathers and mothers may some time have belonged to the Chippewas of Lake Superior.

Very few of the applicants in these bands, however, claimed to have

any other connection with the Lake Superior Chippewas than that they were of a common ancestry, and formerly drew their annuities at the same agency.

There are 495 applicants upon this schedule, many of whom are also found to be applicants upon Schedule B; this is exclusive of duplicates.

Schedule B represents the applications filed under the treaty of 1863, numbering 723, besides duplicates.

These claims we have also adjudged according to the limitations of the treaty of 1863, which requires that each beneficiary shall be a male adult half-breed, who is related by blood to said Chippewas of Red Lake and Pembina bands. This we have construed to mean close relationship at the present time, and not the relationship of a remote, common ancestry; and have also insisted that the applicant shall be a citizen of the United States.

Owing to the widely-scattered localities and the roving lives of the Pembina half-breeds, it has often been very difficult to decide those questions to our entire satisfaction. In such cases we have generally given the half-breed the benefit of the doubt.

Schedule F contains the names of parties who, according to instructions of Hon. J. D. Cox, former Secretary of the Interior, made personal application to locate their claims, under treaty of 1854, for Lake Superior scrip at the land-office in St. Cloud. Nearly all these persons came into St. Cloud with one of the "Red River trains," a long procession of carts that comes annually, laden with furs, from the Northwest and the British possessions. These half-breeds, and others camping on the prairie near St. Cloud, were taken in charge and brought in crowds to the land-office. They subscribed and swore to applications, were identified in due form, located their 80 acres and immediately conveyed it to their friends who had so kindly informed them of the bounty of a generous Government, and receiving in turn from \$15 to \$40 each they went their way to their carts and to their homes in Canada. In these 116 successful applications we find, after the most diligent search, the name of only one man who belonged to the Chippewas of Lake Superior in 1854—Edward Wells—and he had already received his scrip under this treaty.

One person, Pascal Belgard, is a member of the Manitoban government, and never pretended to have any rights under this treaty. He was approached and offered \$15 for his name; he distinctly declared that he was not a proper claimant; but was told it did not matter, and so he took the \$15 and some other one took the 80 acres of land.

Schedule G shows the personal applications made in a somewhat similar way at the land-office at Duluth. We would call the attention of the Commissioner to this schedule and the certificate indorsed thereon.

Schedules A, D, and E have already had sufficient reference.

Schedule K contains a list of applications taken by R. F. Crowell, in 1870, under the treaty of 1854. We have passed upon the same in accordance with the construction of the treaty adopted.

Schedule L contains a list taken by Mr. Crowell at the same time, under treaty of 1863, with our findings thereon.

Schedules H and I contains a list of the applicants who appeared before the commission without our findings in each case under both treaties.

We also return you herewith the applications sent to us for examination, and forward those filed with the commission by the different agents and applicants themselves before the commission.

It is proper that reference should be made to the personal character and qualifications of the persons from whom we have received important information, and whose names frequently appear in the evidence taken.

Benjamin G. Armstrong and Joseph Gurnoe, of Bayfield, Wisconsin; Vincent Roy, jr., and D. George Morrison, of Superior City, are mixed-bloods who have spent their lives at Lake Superior, and are intimately acquainted with the mixed-bloods belonging to the Chippewas of Lake Superior.

John Baptiste Bottineau, now resides at Ossea, Minnesota, a very intelligent mixed-blood of the Pembina band. He resided at St. Joseph, Dakota Territory, for some years, trading with the half-breeds in that region of country. Peter Bottineau, the celebrated guide, was born and raised in Pembina, and by his repeated visits to that section of the country inhabited by the mixed-bloods of the Pembina bands has kept up an intimate acquaintance with the families and almost all the individual members of the families of the mixed-bloods connected with the Red Lake and Pembina bands. John B'te Wilkey and Antoine Azure, of St. Joseph, are two reliable mixed-bloods.

Joseph Robert, of St. Paul, was once a resident in the Red River country, and has traded there more or less every year since.

Clement H. Beaulieu, John H. Fairbanks, and Peter Roy, for a long time residents in the Mississippi Valley, were from Lake Superior, and are intimately acquainted both with the mixed-bloods living in the valley of the Mississippi and at Lake Superior.

R. C. Burdick, Philip Beauprie, and Captain J. J. Hill have had much intercourse with the mixed-bloods in the Red River country.

George Bonga has served for a long time as the Government interpreter, and has been a trader at Superior, and among the Chippewas of the Mississippi and Pillager bands.

Your commission make the following recommendations as a guide for future action in reference to scrip:

First. That such legislation by Congress be secured as will hereafter forbid the receiving of any applications for scrip under the treaty of September 30, 1854, at La Pointe, Wisconsin, with the Chippewas of Lake Superior, at any land-office, until the merits of such application shall have been decided and the bounty granted by special act of Congress in each case.

Second. That for future applications for scrip under the Red Lake and Pembina treaty of October 2, 1863, and April 12, 1864, an authorized form be prepared by the Department of the Interior which shall clearly set forth the treaty and its proper construction, and shall declare the age, birth-place, parentage, and residence of the applicant; and that no other form of application be allowed; and that the Indian agent for the Pembinas, or some other designated authorized person, shall be required to certify that he has made all necessary inquiries in the case, and believes the applicant is entitled.

Third. That immediate action be taken on the entries at the St. Cloud land-office, as set forth in Schedule F, and at the Duluth land-office, as set forth in Schedule G, and that said entries be canceled. Not one of them having been found entitled.

Fourth. That in any treaties hereafter to be made with any tribe of Indians by which lands may be ceded, no promise of scrip shall be made a part of the consideration by the Government. The provisions under the "homestead law" being regarded sufficient to provide for all who desire to settle on the lands, and the history of all half-breed scrip clearly proving that such Government bounty inevitably leads to fraud and corruption, and brings no help to the half-breed.

Fifth. That immediate steps be taken to secure the Government against loss by canceling all entries made at the different land-offices on applications for scrip found illegal, for which the patent has not yet been issued.

Sixth. As to what course should be pursued, if any, to secure the punishment of parties to the frauds which your commission has disclosed, we do not feel called to express an opinion further than to suggest that the interests of all true government, both of its honor and justice, in coming time, seem to require that such flagrant wrongs as perjury, and subornation of perjury, and forgery and embezzlement, should not be permitted to escape the mark of condemnation and punishment; and especially do we hold it important that an officer of the Government, made a guardian of the nation's wards, should not be permitted to enjoy, with impunity, the fruits gained by such crimes at the expense of his wards.

Respectfully submitted.

HENRY S. NEAL,  
*Commissioner.*

S. N. CLARK,  
*Special Commissioner, United States Indian Agent.*

EDWARD P. SMITH,  
*Special Commissioner, and United States Indian Agent.*

Hon. H. R. CLUM,  
*Acting Commissioner of Indian Affairs, Washington, D. C.*

# D 1.

ST. PAUL, MINNESOTA, September 15, 1871.

SIR: The undersigned would respectfully represent that on or about the 5th day of August, 1870, he was designated a special agent of the Indian Office, "to take evidence with a view to ascertain what persons of mixed-blood are entitled to receive certificates of scrip for lands under the provisions of the seventh clause of the second article of the treaty concluded at La Pointe, Wisconsin, on the 30th day of September, 1854, between the United States and the Chippewa Indians of Lake Superior and the Mississippi." And, also, under the eighth article of the treaty of October 2, 1863, made between the United States and Red Lake and Pembina bands of Chippewas, and the seventh article of a supplementary treaty, made by the same parties at Washington, D. C., April 12, 1864. That his letter of appointment was received on or about the 15th day of September, 1870, and he entered upon the discharge of his duties. That in said letter of appointment he was instructed as to the kind and amount of "proofs required to establish a proper claim," under the said respective clauses of said treaties. His instructions under the provisions of the treaty of the 30th of September, 1854, with the Indians of Lake Superior and the Mississippi, were as follows:

The proofs required to establish a proper claim under this clause are such as will clearly show that the party claiming is a "mixed-blood of the Chippewas of Lake Superior," and that at the date of the treaty aforesaid, he or she was the head of a family, or twenty-one years of age, as the case may be. These facts must be sworn to by the mixed-blood claimants, whose testimony as to the same facts, must be corroborated by the affidavits of two disinterested witnesses, &c.

In the discharge of his duties the undersigned was met by claimants and attorneys of claimants, under the treaty of the 30th of September,

1854, who maintained that, to entitle them to be beneficiaries under said treaty, it was not necessary that they should at the date of said treaty reside among the Lake Superior Chippewas; that if they were mixed-bloods belonging to, descendants of, having a common lineage with, related to, the Chippewas of Lake Superior, it was all that was required; that their place of residence was immaterial. They maintained that this question had been presented to the Indian Office and to the Secretary of the Interior, in 1863, in the cases of Elizabeth Borup and Theodore Borup, mixed bloods, residing in Ramsey County, Minnesota, and that certificates for land had been issued to them; that the Secretary of the Interior had decided that certificates for lands should be issued to the mixed-bloods without regard to their residence, the only requirement being satisfactory evidence that they were mixed-bloods, belonging to the Chippewas of Lake Superior and the Mississippi, and were twenty-one years of age, or the head of a family at the date of said treaty, and that the Department, in repeated instances since, had approved of that decision and acted in accordance therewith. It was also claimed that those persons that acted for the Indians in making said treaty maintained that the intention and object of that provision of the treaty was to apply to all "mixed-bloods of the Chippewas of Lake Superior," wherever they might be.

Upon investigation the undersigned learned that the question as to who were legally entitled to the benefit of this provision of the treaty had been presented to the Indian Office as early as July, 1856, and that the honorable Commissioner had construed the treaty to mean only those "mixed-bloods of the Chippewas of Lake Superior" who resided among or contiguous to the Indians of Lake Superior, as distinguished from the Chippewa Indians of the Mississippi and the Chippewa Indians of Michigan. That subsequently, in the month of March, 1863, this question was again brought to the attention of the Indian Office, upon the applications of Elizabeth Borup and Theodore Borup for 80 acres of land under the provisions of said treaty.

A re-examination of the question was had and was submitted to the honorable Secretary of the Interior. In reporting the former construction of the treaty the Commissioner of Indian Affairs stated:

From an examination of the evidence submitted, it is to me, at least, doubtful if the latter allegation (construction of the treaty) is sustained; but granting that, it is in my mind a forced construction of the treaty to require that the mixed-bloods should reside among or contiguous to the Indians in order to be entitled to the benefits of its provisions.

The Secretary of the Interior thereupon overruled the former construction of the treaty by the Indian Bureau, and decided that the said claimants were entitled as beneficiaries under the provision of said treaty. Under this decision of the Secretary scrip was issued to said Borups, and thereafter scrip continued to be issued to other mixed-bloods without regard to their residence, the only requirements being satisfactory evidence that they were half-breeds or mixed-bloods belonging to the Chippewas of Lake Superior and the Mississippi, and were twenty-one years of age or the head of a family at the date of the treaty.

In 1865 this matter was again brought to the attention of the head of the Department, there being another Secretary of the Interior, and the same decision as to who were beneficiaries under this provision of said treaty was adhered to, but the manner or method of carrying out the provision was changed.

In 1867 or 1868 the Acting Commissioner of Indian Affairs, in a communication to the Secretary of the Interior, reviewed the past action of

the Department in regard to this matter, and the honorable Secretary decided that all half-breeds or mixed-bloods belonging to the tribe, parties to the treaty, who were twenty-one years of age or the head of a family at the date of the treaty, were entitled to the benefits of this provision of said treaty, and that thereafter certificates for land were issued; that the position of the Department has remained unchanged and still adhered to, as to who are beneficiaries under this provision of said treaty.

In the discharge of his duties, the undersigned was guided by his instructions and the decisions of the Department above referred to. No list of names of those to whom scrip had been issued, nor other information of that kind, was furnished the undersigned.

The honorable Commissioner of Indian Affairs, by letter dated February 7, 1871, directed the undersigned to report to the Indian Office what progress he had made in carrying out his instructions, together with all the facts he had been able to collect up to that time. In accordance with said direction the undersigned, under date of March 10, 1871, submitted such a report of his action as he was able, under the circumstances, at that time.

That by letter from the Acting Commissioner of Indian Affairs, dated May 4, 1871, the undersigned was informed of the revocation of his appointment as a special agent, and of his appointment as a special commissioner "to be associated with Henry S. Neal, of Ironton, Ohio; and Seldon N. Clark, agent for the Chippewas of Lake Superior; and Edward P. Smith, agent for the Chippewas of the Mississippi; who will act, when within their respective agencies, for the purposes mentioned in your former appointment." Evidently constituting two boards, one of which was designed and designated to act within the agency of Seldon N. Clark, and the other within the agency of Edward P. Smith. That the undersigned was instructed in said appointment as special commissioner as to the nature and amount of evidence required in each case.

Under the seventh clause of the second article of the treaty of the 30th of September, 1854, with the Chippewas of Lake Superior and the Mississippi, as follows:

The proofs required to establish a proper claim under this clause are such as will clearly show that the party claiming is a "mixed-blood of the Chippewas of Lake Superior," and that at the date of the treaty aforesaid, he or she was the head of a family, or twenty-one years of age, as the case may be. These facts must be sworn to by the mixed-blood claimants, whose testimony as to the same facts must be corroborated by the affidavits of two disinterested witnesses, whose credibility must be certified by you, or your associates, if such witnesses are personally known to you or them, or if not so known, then their credibility may be certified by the judge or the clerk of a court of record, attested by the seal of such court.

And under the eighth article of the treaty of October 2, 1863, and the amendatory seventh article of the treaty of April 12, 1864, with the Red Lake and Pembina bands of Chippewas, as follows:

In ascertaining who are entitled to the benefits secured by the aforesaid treaties last mentioned, you will observe that the grant is confined to the male adults. You will require each applicant to make oath that he was, at the date of the treaty of 1863, related by blood to the said Red Lake and Pembina bands of Chippewas; that he was at the time twenty-one years of age; that he has adopted the habits and customs of civilized life; was at that time a citizen of the United States; has not at any time applied for or received scrip for lands under treaty with the Chippewas of Lake Superior, or with any other tribe of Indians, or has not at any time received an allotment or reservation of land under treaty with any other tribe of Indians. Should it appear that any applicant has at any time applied for and received scrip, or has had allotted to him land under the provisions of any other treaty with any tribe or band of Indians, you will reject his application. In addition to the oath of the applicant, as above stated, two disinterested persons, whose credibility must be certified by you

or your associates, must make affidavit to the same facts as required of the applicant, (those facts which relate to receiving scrip or lands under other Indian treaties may be stated according to the knowledge and belief of the affiants,) and that they have not acted as attorneys or agents for the applicant, and have no interest whatever in the case.

In executing the trust confided to you you will be careful to observe the foregoing instructions.

That subsequently, by letter from Colonel H. R. Clum, Acting Commissioner of Indian Affairs, dated May 8, 1871, the undersigned was instructed, "in conjunction with your cocommissioners, to make an examination and investigation of each case in which an issue of scrip has already been made under the provisions of the treaties referred to in said instructions; in making such investigation, you will be governed by the rules laid down in your original instructions in regard to the manner of making proof required from claimants for lands under said treaties as far as the same are applicable."

That the undersigned withheld his approval of the report (dated September 4, 1871) submitted by the other special commissioners to the honorable Commissioner of Indian Affairs for the following, among other reasons:

First. Because the report reflected upon the decisions and practice of the Bureau and Department which appointed the commission.

Second. Because statements which were not made under oath nor to the commission, but to some member of it, were reported as evidence submitted to the commission.

Third. Because sufficient time was not allowed the undersigned to consider and weigh the information, statements, and evidence submitted to and obtained by the commission or members thereof.

Fourth. Because the report, together with the evidence and papers submitted therewith, were not in the form required by instructions, and were not in substance as required by instructions.

Fifth. Because the undersigned is not convinced of the correctness of all the statements and conclusions contained in said report.

Very respectfully, your obedient servant,

R. F. CROWELL,  
*Special Commissioner.*

Hon. H. R. CLUM,  
*Acting Commissioner of Indian Affairs,  
Washington, D. C.*

---

E.

WASHINGTON, D. C., *September 30, 1871.*

SIR: I have the honor to report that, in compliance with Department instructions of the 31st July last, to investigate and report on certain matters connected with Indian affairs in Colorado, I left Washington on the 1st ultimo to enter on the discharge of the duties intrusted to my care. On my arrival at Denver, on the 8th day of August, I ascertained that Agent Littlefield was then on his way to that place, having left his post at White River a few days previous for the purpose of purchasing supplies for the Tampa, Grand River, and Uintah Utes under his charge, and, deeming it of importance to confer with Mr. Littlefield on the state of affairs at his agency, I deferred my departure for the interior of the Territory until this object had been accomplished.

The White River agency was located by Mr. Oakes under the superin-

tendence of Governor McCook on the 8th September, 1869, in latitude  $40^{\circ} 6'$  north, and longitude  $107^{\circ} 40'$  west, the distance from Denver, by way of Rawlings's Springs, being about four hundred miles.

The frequent changes of agents and acting agents in charge—not less than eight during a period of two years—has proved very detrimental to the prosperity of the agency and the interest of the service; and it is to be hoped that the present agent, who appears to be a man of intelligence and energy, earnest in his desires to do what is right, may be able to restore the confidence of the Indians regarding the stability of the agency, and the benevolent purposes for which it was established by the Government. Thus far little or nothing has been done, except some laudable efforts by Mr. Adams, Agent Littlefield's immediate predecessor, for the civilization of these Indians; but Mr. Littlefield appears confident that, if time and means are given him, he will soon be able to make a favorable report of his charge.

On the details of his official duties, as regulated by the rules of the Indian Bureau, I gave him such information and instructions as his total inexperience with the new field of labor in which he is placed seemed to demand. Having completed my arrangements for transportation to the Los Pinos agency, I left Denver on the 14th August, and after a journey of some three hundred miles, through mountain and valley, reached, on the 25th of that month, when within six miles of the agency, a camp of Tabeguache Ute Indians, numbering fifty-one lodges. U-rah, who is regarded as the head chief of all the southern Utes in Colorado, was present, as also were the following sub-chiefs: La-po-van-er-i, Sha-wana, Cha-vis, Ta-wa-wat-se-wich, Jim, Bill, and Ah-kaw-ash. They all expressed in earnest language the great satisfaction and pleasure they felt in being remembered by the authorities in Washington, and their desire to have a long talk with me before proceeding to the agency.

The Tabeguaches, I was informed, number some five hundred lodges, of which, as before stated, only fifty-one were present, the remainder being scattered all over the reservation and elsewhere, engaged in the chase. U-rah had heard of my arrival at Denver with intention to visit his people, and had collected some of the chiefs and headmen of the tribe to receive me in their tented camp. The subject of their talk at this time consisted of complaints against their present agent, Mr. Trask, but their complaints were of a very indefinite character, without anything tangible to rest upon. They did not like the man. He shut himself up in his house, refused to issue rations to their squaws and children when they were starving, and treated them like dogs. They wanted a man of life and energy—one that they could rely upon for counsel and advice, and recommended for appointment their old friend, Colonel A. H. Pfeiffer, a late officer of the volunteer army, in whom they appeared to repose unbounded confidence, from their acquaintance with him while agent for the Utes in New Mexico some ten years ago. In reply I explained to the Indians that Mr. Trask was probably not to blame for the scarcity of provisions complained of, as the supplies now on the way may not yet have reached the agency; that he had been highly recommended to the Government as the right man for the office he now held; that I had been sent out and was prepared to instruct him in everything pertaining to his duties as agent; and that I felt confidence that the bad opinion they now entertained of him would be changed after better acquaintance. Promising to meet them again on my return from the Los Pinos agency, I left for that place the same evening. This agency is located some sixty miles southwest of the village of Saquache, on a fine stream, a tributary of the Gunneson River, the site having been selected by

Lieutenant Speer in July, 1869. The buildings, erected in the fall of that year under contract with Messrs. Crane and Kettle, of Denver, I found precisely as represented by Special Agent Thompson in his report of September 1, 1870, and will, after some slight improvements suggested by me to Agent Trask have been made, answer all the purposes for which they are intended. The school-house is a large and commodious building, capable of providing for all the children of the tribe; but thus far no teacher has ever been engaged, and the agent despairs of ever being able to overcome the indifference of the parents and repugnance of the children to avail of the benefits of instruction. Nor have any attempts worth mentioning been made at farming. The climate has proved too cold for grain, and experiments with potatoes and turnips by means of irrigation have met with but slight success.

There are, however, within the reservation, and not more than thirty miles from the agency, as fine farming-lands as any in the Territory, known as the Uncompagne country, watered by a stream of that name, where agricultural operations may be carried on to any extent and with every prospect of success.

Of the cows and sheep furnished these Indians, under the provisions of the thirteenth article of the treaty of 1868, for the purpose of inducing them to adopt habits of civilized life and become self-sustaining, there are now herded at the agency 1,160 head of sheep and 640 cows and calves, a great number having been killed for mutton and beef and others destroyed by the wolves, which infest this region. The sheep, as Agent Trask has heretofore reported, are all wethers, except some two or three dozen ewes, and although they would to-day command the same price that was paid for them, yet they are not suitable for the purposes of increase and propagation for which they were intended. The proceeds from the sale of the wool may be sufficient to defray the expenses of herding them; but as no benefit can result from this course, I recommend that the agent's proposition, to distribute them among the Indians in lieu of beef, may be approved. The cows, said to be exclusively of the Texas breed, are in fine order and well taken care of, but by reason of the great scarcity of bulls among them the increase has been very slow. An expenditure of a few hundred dollars in American bulls of superior breed would make this herd of cattle a source of wealth to the tribe, with but little expense to the Government.

The mill at this place is said to be one of the best in the Territory, capable of cutting from 4,000 to 4,500 feet of lumber per day; but since the present agent took charge it has been lying idle, with a large quantity of logs scattered around it ready to be sawed. The people of Saquache being exceedingly anxious to exchange provisions for lumber, by which the expense of the Government of feeding the employés of the agency may be saved, I suggested to the agent the propriety of availing of this source of revenue.

The agency establishment consists at present of only five persons, a blacksmith, cook, and three herders, all hard-working men, well deserving the small stipend they receive for their services.

With reference to certain vouchers left unsettled by Lieutenant Speer, which I was instructed to examine into, the agent informed me that he had, previous to my arrival, sent the same to the Indian Office; but from his memorandums I learned that they were mostly connected with salaries due employés and for supplies purchased on credit, without any special authority of the Department.

The accounts of Agent Trask, owing to inexperience and ignorance in matters of that kind, I found in a great state of confusion, and had

to spend a great deal of my time at the agency correcting them, giving minute instructions in every detail for his future guidance in their rendition. The report of his insanity, which I heard at Denver and at other points of my journey to the agency, is without foundation, and may be ascribed to a certain eccentricity in manners and oddity in appearance peculiar to Mr. Trask. On the contrary, I found him a man of more than ordinary intelligence, and an examination into his accounts, confused though they be, gives unmistakable evidence of honesty and integrity. The whole expense to the Government of his journey from his home at St. Joseph, Missouri, to the Los Pinos agency, in Colorado, is \$115, the United States receiving credit for free tickets granted him over the railroad to Denver, while the remainder of his journey of three hundred miles through the mountains was mostly performed on foot. I am satisfied the agency under his superintendence will be managed with the most scrupulous honesty and with strict regard to economy, and there is reason to hope that, after he has acquired a little more experience in his duties and become familiarized with the Indian character, he may show a good record for ability and efficiency.

The head chief and the principal men having assembled at the agency on the day following, we had a long talk with reference to the treaty of 1868, and its stipulations and provisions. They complain bitterly of the frequent intrusions of white men on their reservation, and the failure of the Government to protect them in the undisturbed enjoyment of their lands as agreed upon by the terms of the second article of said treaty. They were glad to learn that their annuities and provisions were now on the way, as they were greatly in need of them; and they wished me particularly to represent to the Department that their tents were old and ragged, and that a new supply of tent-cloth would be more acceptable to them than anything else, and, as they relied in a great measure on the chase for their subsistence, they would be grateful, also, for a few more guns, such as can be purchased in Denver for \$16 each. I promised to lay their request before the Commissioner, recommending a favorable consideration of the same. On the subject of intrusions by miners and others on their reservation they appear to be exceedingly sensitive, but as the reservation boundaries have never been surveyed, it is in most cases impossible to determine whether the alleged intrusions have actually been made. By the third clause of the seventh article of the late treaty the President is authorized at any time to order a survey of the reservation, and it is evident the sooner the order is issued the better for all concerned. The area of the reservation is 19,077,120 acres, comprising about one-third of the Territory of Colorado, bounded on the west and south by the Territories of Utah and New Mexico, and on the north and east by the meridians of longitude 107° and latitude 14° 15'. The cost of extending these two lines, according to the estimate of the surveyor general of Colorado, with whom I conversed on the subject, would be about \$25,000, for which I suggest that an estimate be submitted to Congress at its next session.

On my return from the agency I made another visit to the Ute camps, remaining over night and spending the evening with U-rah and other chiefs in their tents. In course of conversation U-rah remarked that in his visit to Washington, in 1868, at the head of the Ute delegation, the President had invited him whenever he wanted anything to come to him, and, if possible, his wishes would be complied with. Availing of this promise, he now requested that Mr. Trask be sent home to his friends, and Colonel Pfeiffer appointed in his place; and, if necessary,

he would come to Washington himself, at his own expense, and personally lay the petition before the President.

After my return to Denver I visited, according to instructions, the Ute Indians in that vicinity, numbering some two hundred souls, in charge of Special Agent Thompson, and headed by Pe-ah and Colorado as chiefs. Repeated efforts have been made to induce these Indians to go on the reservation and join the agency at White River where they belong; but thus far all such efforts have proved unavailing. My own visit among them had the same object in view, but, I regret to say, without any better result than heretofore. I endeavored to impress their minds with ideas of the duty they owed to themselves, their children, and the Government which cared for them, and with which they had entered into treaty stipulations; but, although they listened attentively to what I had to say, yet it became evident from their replies that nothing but actual force will ever induce them to exchange their present camping-grounds, endeared to them by memories from childhood, for the distant hills in the north.

For the present I can only recommend that the special agency be continued, and that clothing and provisions, not to exceed \$5,000 per annum, be issued for the partial support of these Indians, in order to prevent, so far as possible, the depredations on private property that would undoubtedly result should Pe-ah and his followers be left entirely to their own resources.

I cannot close my report without expressing my grateful acknowledgments of the courtesy and attention extended to me by the governor of Colorado, General E. M. McCook, during my stay at Denver, and sincerely trust, for the benefit of the service in Colorado, that the official connection heretofore existing between him and the Indian Department may be resumed.

I reached this city, on my return from Denver, on the 23d instant, and have resumed the general duties of my desk in the office of Indian Affairs.

Very respectfully, your obedient servant,

G. F. JOCKNICK.

Hon. H. R. CLUM,

*Acting Commissioner Indians Affairs.*

---

F.

SEPTEMBER 1, 1871.

SIR: In compliance with instructions dated June 22, 1871, empowering me to "visit the Sioux agencies on the Upper Missouri, and to investigate the affairs of said agencies and report their condition," I have the honor to submit the following:

In furnishing information respecting the present condition of the schools, and the social and religious training of these people, it is with great pleasure I am enabled to present the following interesting and reliable papers from gentlemen in charge, feeling they are not in any way colored for report purposes. And your attention is called to these papers, marked A, from Rev. John P. Williamson, Samuel D. Hinman, and A. L. Riggs, giving interesting statements of the schools, churches, and social condition of these people at the Yankton, Ponca, and Whetstone agencies, Dakota, and that of Santee agency, Nebraska.

At the Crow Creek agency, there is neither school nor church. This

agency consists of two agencies, the Lower Yanktonnais and Two Kettle Sioux, constituting those at the agency proper, and the Lower Brulé Band of Sioux, who occupy the west side of the river, some twelve to twenty-five miles below the agency proper, and is generally known as the Lower Brulé agency. The Yanktonnais and Sioux, who constitute the agency proper, number about twelve hundred, and are represented as being peaceful and well disposed. The Lower Brulé Band are quite different in character, are violent in their passions, and of a roaming and hostile disposition. These occupy the country from the north of White Earth River to Old Fort Lookout Bottom, and number some two thousand.

But few and miserably constructed cabins constitute homes at this agency. Even the buildings at Crow Creek proper are of the very poorest order. The house occupied by the agent, H. F. Livingston, is a shabbily constructed, one and a half story building, 16 by 20 feet in dimensions. This, with all the other buildings, was constructed of green cottonwood lumber, without foundations, which have since warped and so changed their positions that neither roofs nor weatherboarding afford much protection to Government stores or to the inmates in either cold or wet weather. Everything, however, bears an air of neatness and cleanliness, deserving a better foundation for labor employed in this direction. A small outlay would improve the buildings at all the agencies, and add much to the comfort of the occupants; and I would most respectfully insist that the dwelling occupied by the worthy agent at Crow Creek should receive the earliest possible attention, and be enlarged and made comfortable before the storms of winter set in. It is a duty the Government owes these faithful and efficient servants who have surrendered their accustomed comforts of civilization to provide for them, and all connected with these agencies, comfortable quarters; and it is felt that a knowledge of the facts is sufficient to insure immediate attention. The flattering prospects for a bountiful harvest of corn, potatoes, beans, &c., (the first full crop for four years,) has induced a disposition to increase the farming interests for the coming year. There have been cultivated the past season about 150 acres of corn at the agency proper, and some 200 acres at the Lower Brulé.

There is a deficiency in the quantity as well as in the quality of the farming implements at this agency, and additional supplies will be necessary in order to produce any marked increase in agriculture another season.

#### SANTEE.

The Indians at Santee agency, Nebraska, now in charge of Joseph Webster, esq., number over one thousand. At this agency I found a goodly number of these people dressed in the habiliments of civilization, and about one hundred families living in houses on their several allotments. The land in this locality is of good quality, and about 600 acres are now under cultivation, 350 acres in corn, 150 in wheat, with a large proportion in vegetables common to agricultural districts. Everything in this department bespeaks a plentiful reward for the labor bestowed, and with these encouraging results it is contemplated devoting a much greater number of acres to the growing of grain another season. Labor is rapidly increasing, the men becoming more and more disposed to work, without considering it a disgrace, and many are now anxiously waiting to have houses erected on their allotments of land, while some

say they will build their own houses, and are desirous to have their money invested in agricultural implements necessary to conduct farming operations.

It is evident that plows and books are the necessary instruments that must be used in the civilization of this people, and while the Government is abundantly disposed to furnish every facility calculated to hasten the settlement and domestication of these people upon lands of their own, too much praise cannot be awarded to the missionary work that has been wrought by means of combined wisdom and patience of men who have sacrificed everything to secure the confidence and welfare of these people. Missions are the handmaids of the peace policy. They present ideas of civilization in the most attractive forms, and have impressed the young and old, and brought these ideas of a better and happier life directly to their habitations or places of abode, by means of the Christian work of teaching them to read and furnishing them with books in their own language. With the great work of these missionaries, co-operating with the just and benevolent policy of the Government, these reservations will soon become self-supporting and shields to frontier settlements, and will effectually protect white settlers from the savage sorties of the wild prairie Indians. This, however, is but one of the many good results expected, that makes it desired by all friendly Indians, and seconded by experienced missionaries and Government agents, that such measures be adopted and prompt aid rendered as will insure the retention of these people upon their several reservations and direct and encourage them in the development of the agricultural resources of the soil.

While labor civilizes, it also opens the door that leads in the direction of Christianity, and little can be expected by the missionary unless these people receive and adopt the civilization of labor, and quite as uncertain would labor meet with success, and civilization unattended by the Christianizing influences of schools and churches. And it would now appear of vital importance that each family should be supplied at the earliest day practicable with a homestead or allotment, together with oxen and wagon and farming utensils, and enough of the needful to overcome the many difficulties necessarily encountered in opening a new farm in this western wilderness.

And I wish to call special attention to papers B, from the Rev. Samuel D. Hinman, missionary in charge of Dakota and Ponca Indians, also for the Santee, on the Sioux River, at Flanders, calling the attention of the Department to the necessity of furnishing material aid. Also papers from the Rev. John P. Williamson, missionary of the American Board of Commissioners for Foreign Missions, in regard to the "Big Sioux colony," and marked C. Suggestions of gentlemen who have manifested so much wisdom in the management of these untutored people, and whose labors have been crowned with so much success, should receive the most careful and candid consideration.

With these aids and superintendents, having knowledge, patience, and perseverance, the success of the present policy of the administration of Indian affairs will transcend the expectations of its most sanguine friends.

It is true the older Indian can scarcely be expected to adopt altogether civilized practices; but, while many of them adhere even to the blanket, they are none the less desirous that their children should be taught to adopt the better way of civilized life; and the time is not far distant when these reservations will become self-sustaining and a rebuke

to all opposition to the Christian course the Government has adopted toward these people.

I am, most respectfully,

N. J. TURNEY,  
*Special Agent.*

Hon. COMMISSIONER OF INDIAN AFFAIRS,  
*Washington, D. C.*

A.

*Statement of the work of the American Board of Commissioners for Foreign Missions.*

YANKTON AGENCY, DAKOTA TERRITORY, *August 1, 1871.*

DEAR SIR: We have engaged at our mission station at the agency one American teacher, besides myself, and have kept school for thirty weeks the past year. We also have two other schools on the reservation taught by native teachers for ten weeks each.

The following summary will give you some idea of the work:

|                                           | Number of pupils. | Boys. | Girls. | Daily attendance. | Branches taught.                                                                           |
|-------------------------------------------|-------------------|-------|--------|-------------------|--------------------------------------------------------------------------------------------|
| YANKTON AGENCY.                           |                   |       |        |                   |                                                                                            |
| J. P. Williamson, M. M. Pond, teachers... | 72                | 48    | 24     | 26                | Dakota reading, English reading, spelling, arithmetic, geography, penmanship, and singing. |
| JUMPING THUNDER'S CAMP.                   |                   |       |        |                   |                                                                                            |
| David Light, teacher .....                | 60                | 41    | 19     | 28                | Dakota reading, spelling, and singing.                                                     |
| MEDICINE COW'S CAMP.                      |                   |       |        |                   |                                                                                            |
| Philip Walter, teacher .....              | 57                | 28    | 29     | 25                | Dakota reading, spelling, and singing.                                                     |
| Total.....                                | 189               | 117   | 72     | 79                |                                                                                            |

Our place is to teach them to read their own language first, after which they are better prepared to study English. We have religious meetings for the Indians regularly at the agency. The attendance is about double what it was a year ago. A church has been organized during the year, and about twenty professed the Christian religion.

Two years ago last March, when I removed from the Santee agency to this place, the Yanktons had never had a missionary and very little teaching of any kind, and there were very few of the Indians who had any desire for learning. Now, through the influence of the Episcopal mission afterward established as well as our own, the views of the Indians in regard to education, civilization, and Christianity are being gradually changed, and as their views change their actions will gradually follow suit. The social, moral, and spiritual renovation of a people covered with the pollution of ages is a great and most blessed achievement, and, like all great achievements, requires great time and labor to bring it about.

We are not of those who expect to accomplish it in a day or a year. But we do believe it is well worth the labor of generations, and the bounden duty of a Christian nation to bestow it upon her heathen subjects. And, at the present time, the outlook at the Yankton agency is hopeful.

Most respectfully, yours, &c.,

JOHN P. WILLIAMSON,  
*Missionary of the American Board of Commissioners for Foreign Missions.*

*Notes concerning the Christianization and Civilization of the Dakotas.*

In the year of 1835 the American Board of Commissioners for Foreign Missions began missionary labor among what are now generally known as the Santee Sioux or Dako-

tas of the Mississippi. In 1860, or twenty-five years later, the Episcopal mission entered a portion of the field. Among the first labors of the missionaries of the American board was the reducing the Dakota language to writing, the gathering of the vocabulary of the language, the preparation of school-books, and the translation of the scriptures.

The completed vocabulary was published in 1852. The whole of the New Testament is now in the hands of the people in a thoroughly revised edition, together with a considerable part of the Old Testament, for this work of the translation of the Scriptures and book-making is yet going on. The list of our publications in the Dakota contains some thirty different titles. It has been our belief that to reach the people at large you must get at them through their own language. Experience has confirmed this idea. While we have labored much in boarding-schools and in English schools, we must say that the great advancement of this people is owing, educationally, to the fact that the people, as a whole, know how to read their own language, and most of those who can read can also write it; and we find that the quickest way to teach them English is to give them a start and set them to thinking by the study of their own language first.

Contrary to the theory of many, we have found that civilization cannot be had without Christianity. The Indian must lose faith in his native gods before he will dare to work. He must have something of a better faith before he will have a persistent, patient desire to work.

These missions of the American board now occupy these main points:

1. At the head of the Coteau, near Fort Wadsworth, Dakota Territory, among that portion of the Minnesota Sioux or Dakotas called the Wahpeton and Sisseton bands, we have a training school established.

2. At the Santee agency, Nebraska, another normal training school.

3. At the Yankton agency, Dakota Territory. This is a new field comparatively, and never occupied by missionaries until the establishment of the mission there under the charge of the Rev. J. P. Williamson, in March, 1869. We have also kept a teacher part of the time at Crow Creek.

The settlement on the Big Sioux River is composed of colonists from the Santee agency, and most of them are in membership with our mission church.

*Statistical summary.*—Three central stations; 2 training-schools; 9 churches; 659 church members, May 1, 1871; 7 native preachers and pastors; 6 native teachers; 1,000 read their own language; 405 pupils in mission schools proper.

*Santee training-school.*—Pupils in attendance during the year, 115; average attendance, 55; young men, 37; young women, 18; boys, 31; girls, 29; total, 115. Number of teachers, 4; branches taught: Dakota reading, English, arithmetic, geography, grammar, geometry, drawing, map-drawing, writing, composition, singing, and instrumental music.

A. L. RIGGS,

*Missionary, American Board of Commissioners for Foreign Missions.*

---

MISSION HOUSE, SANTEE AGENCY, NEBRASKA,

August 2, 1871.

MY DEAR SIR: I desire to call your attention to a matter that concerns our intercourse with the Indians, especially the wild tribes of the upper country.

In all their trouble, or whenever trouble is threatened, they send down their delegations to consult me and get advice. This is very beneficial to them, and gives me additional power to aid the Government in case of need. What the Indians see here also makes an impression and inclines them to favor civilization.

Heretofore these Indians have visited the governor of Dakota, and been cared for out of the contingent fund of \$20,000 allowed for Indian expenses in that Territory; when they return home they expect presents of clothing or implements of husbandry. These we have to provide, as well as their maintenance, out of our missionary funds. The result is they are always overdrawn, and it does not seem right, especially as our influence among these Indians is used entirely for the benefit of the Government, and in case of trouble may be worth millions of dollars. I gladly do the work of a superintendent without reward; but it seems to me the Government ought to aid us in the matter of contingencies of Indian service and travel, and give us a share of the contingent fund. I think also I should have, as formerly, some commission as special agent, and some power from the Department to correct abuses that I find to exist, or to report them to the Department at Washington without seeming to be a mere informer.

I am, most respectfully, yours,

SAM'L D. HINMAN,

*Missionary in charge Indian Missionary Instruction.*

Mr. N. J. TURNEY,

*United States Special Indian Agent.*

*Missions and schools of the Episcopal Church among the Indians of the Upper Missouri.*

## SANTÉE AGENCY, NEBRASKA.

*Collegiate Church of our Most Merciful Saviour.*—Rev. Samuel D. Hinman, in charge of all missions; Rev. Pane Mazakute, pastor; Luke Walker, deacon; natives. Communicants, 415. School: Teachers—Mr. Walter Hall, Rev. Luke Walker, Miss Mary J. Leigh, Miss Anna Pritchard, Miss Louisa Campbell. Pupils, 175.

*Mission station on the Bazillo.*—Pupils, 50; Rev. Christian Saopi, deacon; teachers, John Chapman, George Redowe.

## YANKTON AGENCY, DAKOTA TERRITORY.

*Church of the Holy Fellowship.*—Rev. W. Cook, pastor; Rev. Daniel Hemans, deacon. Communicants, 85. School: Mr. Daniel Hemans, Miss E. J. West, and Miss Lizzie Steteler, teachers. Pupils, 75.

*Church of the Holy Name, (Chouteau Creek).*—Rev. Philip Johnson, deacon. Communicants, 18. School: Mr. S. P. Jones, teacher. Pupils, 45.

*Church of the Holy Angels, (White Swan).*—\_\_\_\_\_, pastor. Communicants, 11. School: Mr. Amos Ross, Mr. Alex. Pepe, teachers. Pupils, 48.

*Church of the Merciful Father—Ponca Agency.*—Rev. J. V. Dorsey, deacon. Communicants, 5. School: Rev. J. V. Dorsey, Mr. J. N. Lawrence, Mr. C. L. Clair, teachers. Pupils, 50. Station just opened.

*Church of Hope.—Whetstone Agency, Dakota Territory.*—\_\_\_\_\_, pastor. Baptised, 80. Communicants, 3. School: Pupils, 150. Mrs. J. W. Washburn, Mr. A. Jacobs, Miss \_\_\_\_\_, teachers.

Besides, we have a congregation on the Big Sioux, and are hoping to establish schools at Crow Creek and Cheyenne and Brulé very soon. There is also a school at Rolins, and one at Big Woods, taught by Indians; the pupils number 87. Expended this year for missions, \$40,000, and no Government aid.

Yours, respectfully,

SAM'L D. HINMAN,  
*Missionary in Charge.*

## B.

MISSION HOUSE, SANTÉE AGENCY, NEBRASKA,  
July 31, 1871.

MY DEAR SIR: The desire of the Santees is to have a supply of oxen, wagons, plows, and agricultural implements generally. I know that they are prepared to use them. They have both the knowledge and the skill to do so. I think there is a large fund to their credit from the sale of their lands in Minnesota. If no appropriation can be obtained or used for this purpose, I should think money might be obtained from the "land fund." Even twenty yoke of cattle and the same number of wagons, plows, chains, &c., would be sufficient for this year, and would be a great encouragement for the future. Our reservation here will soon be valuable. It must be either improved and occupied, or given up.

If permitted, I would also desire to apply for aid for the Santees now settled on the Sioux River, at Flanders, Dakota Territory.

I am, with respect, ever sincerely yours,

SAM'L D. HINMAN,  
*Missionary in Charge of Dakota and Ponca Indians.*

MR. N. J. TURNEY,  
*United States Special Indian Agent.*

## C.

*Statement in regard to the Big Sioux colony.*

In the spring of the year 1869 about thirty families of Santee Sioux, believing that they could improve more rapidly in that way, removed from the Santee agency in Nebraska to the Big Sioux River, in Dakota Territory, and took claims about forty miles above Sioux Falls, at Flandreau. They since have been joined by others till they now number about fifty families. These Indians have been under the instruction of the missionaries of the American Board of Commissioners for Foreign Missions for thirty-

six years, and now we have a church there of over one hundred members, in which nearly every family is represented and ministered to by a native preacher, supported, in large part, by themselves; and, encouraged by aid from abroad, they are now engaged in building a house of worship, doing a large part of the manual labor with their own hands. By their own labor these Indians have earned the means to pay for securing their homesteads. They have built log-cabins on their separate claims and planted their patches of corn, many of them digging up the ground with the hoe and spade. But it must be many years before they can attain to a comfortable competency with their limited means and inexperienced hands, as every experienced farmer well knows. And the object of this paper is to solicit from the Government some aid in the way of stock and farming implements. This, we believe, the Government should be very ready to grant for the following reasons:

1st. It is in accordance with treaty stipulations. These Indians were parties to the treaty between the United States and different tribes of Sioux Indians, concluded April 29, 1868; ratified February 16, 1869; proclaimed February 24, 1869. Of the names signed to that treaty four are among this colony, viz: Old Flute, All Over Red, Iron Dog, and Big Eagle.

Article VI of said treaty gives these Indians authority to take homesteads and not debar them from the rights of the treaty, the last clause of said article being in the following words: "Any Indian or Indians receiving a patent for land under the foregoing provisions shall thereby and from thenceforth become and be a citizen of the United States, and be entitled to all the privileges and immunities of such citizenship, and shall, at the same time, retain all his rights and benefits accruing to Indians under this treaty."

The treaty goes on to provide most liberally for all Indians adopting the civilized mode of life. Article VIII specially provides for supplying them with seed and agricultural implements, and this is what they most of all need.

2d. The encouragement held forth in this treaty was one great motive in leading these people to break tribal influences, so deleterious to improvement, and adopt our democratic civilization. Is it not base tyranny to disappoint them? They are the first Sioux, if not the first Indians in the United States, to adopt the spirit and life of our American civilization. They have of their own accord done just what the Government has been for generations trying to get the Indians to do. And now will this Government refuse the helping hand which it promised? To our shame, it has for two years refused. And why? Because the Indians exercised a little American independence, and said, if we become civilized it is necessary for us to break up tribal relations and settle down like white men. The Government chose to put on the strait-jacket and say, "No! you must become civilized under the old tyrannical chieftain, supremacy, and customs as you have them." This was something the child the Government had been so long laboring to generate could not understand.

3d. We do not ask for them every provision of this treaty, as we believe it is not necessary; but we do ask that the Government supply them liberally with farming implements, and we suggest that the following items for each family would not be any superfluity: one yoke of oxen, one wagon and log-chain, one plow, one cow, one scythe, one fork, and one hoe.

It might not be best to make the whole appropriation one year, but they should have some help, say \$5,000, immediately. As they have no agent, we suggest that it would be most appropriate, under the present policy of the Government, that whatever is appropriated be expended under the direction of the secretaries of the American Board of Commissioners for Foreign Missions, who have instructed these Indians so long, and with which mission so large a number of the Indians are connected.

Yours, respectfully,

JOHN P. WILLIAMSON,  
*Missionary of the American Board of Commissioners for Foreign Missions.*

## WASHINGTON SUPERINTENDENCY.

No. 1.

OFFICE SUPERINTENDENT INDIAN AFFAIRS,  
*Olympia, Washington Territory, October 1, 1871.*

SIR: In accordance with the instructions of the Indian Bureau, I have the honor to submit herewith my fourth annual report on the condition of Indian affairs in Washington superintendency, a district of

country lying between 45° 30' and 49° north latitude, and between 117° and 125° west longitude.

It is with regret I am compelled to state that upon assuming the duties of superintendent of Indian affairs, after reinstatement, a noted change for the worse was everywhere visible, there having been a retrograde movement in the last two years. I particularly refer to gambling, drinking, ta-man-a-mus, flattening heads, and polygamy; also slavery, all of which were again practiced. The military officers, sent here against their wish, in a service decidedly distasteful to them, as I have heard them repeatedly declare, and looking upon their stay as temporary, did not take the interest they should, or feel inclined to break in upon these tribal customs. In fact, many of the people of this Territory contend that no superintendent or agent has any right to interfere with the customs or tribal habits of the Indians. If they are correct, and this is the policy of the Government, it is folly to attempt to civilize them. My aim has always been to break down these barbarous customs, for as long as they exist nothing can be done toward civilization. Of course, this must be done in a way that will not do great violence to their feelings, but a commencement must be made and steadily adhered to, as a want of firmness and determination in this matter is construed as weakness, while nothing is accomplished and confidence lost. My object in this report will be to lay before the Department the necessities of the Indians, and what is actually essential in their progress toward civilization.

The present policy will, no doubt, prove a complete success, if care be taken in the selection of suitable agents and employés, as the example of men placed over them has a powerful influence, either for good or evil, upon the closely observant Indian.

The policy now pursued is similar to that recommended in my annual report of 1867, and I have always been thoroughly convinced that none but honest, upright, Christian people, full of the missionary spirit, could succeed in civilizing and christianizing these people; and, as an auxiliary to their labors, I would recommend that Congress enact a stringent law against the sale of all kinds of intoxicating liquors, including wine, cider, and beer. The two latter drinks are, perhaps, the cause of more drunkenness than whisky. Unprincipled persons have taken advantage of the fact that the sale of beer was not prohibited, and built breweries near reservations, and by this means induce the Indians to squander their money and become intoxicated. A number of Indians are killed yearly in drunken brawls in the vicinity of these establishments; some of the murderers are now confined on the reservations. I would also recommend the passage of a law by Congress for the punishment of crimes committed among Indians; for so long as an Indian is permitted to kill another without punishment, life has no safeguard. Murder should be made punishable by death.

The necessity of an agent having something like magistratic powers conferred upon him, I think, is very great, so that he may settle difficulties arising among them, and, when an important case arises, or a case between tribes under different agencies, that the agents and the superintendent may constitute a court for the trial or settlement of the difficulty.

#### SURVEY OF RESERVATIONS.

The need of an appropriation for the survey of the different reservations becomes more apparent every day; as railroads are tending this way, and settlers constantly coming in, disputes are continually arising

as to the boundaries. I would also recommend an appropriation (see my estimate for funds for first and second quarters, 1872) to survey in severalty the Tulalip and Lummi reservations under the Point Elliott treaty, the Puyallup reservation under the Medicine Creek treaty, also the S'Kokomish reservation, under treaty Point no Point, the Yakama reservation, Yakama treaty, and also the Chehalis reservation; the title to be vested in the Indians.

#### HOSPITALS.

I would urge the making of an appropriation for all the reservations (except the Yakama, that being supplied) of at least \$2,000 for the building and furnishing of a hospital, as it is almost impossible to administer medicine with any degree of success to Indians living in cold, damp huts; and not unfrequently the medicine is not taken, or not taken as directed, and the beneficial results expected are defeated when the Indian loses faith and returns to his sorcery or ta-man-a-mus. Hospitals are found absolutely necessary in cities, garrisons, and in the field; then why deny them to the Indian?

#### TREATY OF POINT ELLIOTT.

The reservations under this treaty are the Tulalip, Port Madison, Lummi, Swinomish, and Muckleshoot, and are under the supervision of the Catholics—Rev. E. C. Chirouse, sub-agent.

#### TULALIP RESERVATION.

At this reservations are the Government buildings, comprising agents and employes' dwellings, shops, schools, and a very neat church, where service is regularly conducted. The reserve consists of a little more than one township of land, valuable principally for the timber thereon; there is, however, about 1,200 acres of swamp-land, mentioned in my former reports, which, by proper drainage, could be made a productive farm, thereby placing these Indians forever beyond want. In order to reclaim this land an extra appropriation of about \$1,000 for this specific purpose would be necessary.

#### SCHOOLS.

The schools for the boys and girls, numbering full fifty scholars, are a complete success, and could be made more useful if an additional fund was appropriated; for, as it is, many who are equally entitled to the benefits have to be turned away simply because of the want of funds. Very great inconvenience is felt, and beneficial action restricted, by reason of want of room in the schools. It was hoped, from the tenor of the circular dated December 25, 1870, that an appropriation would be made for the improvement and enlargement of the agency buildings, not only here but elsewhere. I have no doubt that if the agent is properly supported by the Government it will not be long before a marked improvement is wrought.

#### PORT MADISON RESERVATION.

This reservation consists of about 7,000 acres, heavily timbered. The Indians are Catholics principally, are very industrious, attend church

regularly in a neat edifice erected by themselves, where service is conducted by one of their own number when a priest is not present. They own cattle, and are engaged in cutting and selling saw-logs on their own responsibility, Mr. G. A. Meigs, of the Port Madison mills, purchasing the same from them, he having, by his upright, honorable dealings, secured their entire confidence, and been of incalculable benefit to them, and also to the Department. No employé is stationed here for the want of funds. I would recommend an appropriation of \$1,000 for the payment of one.

#### LUMMI RESERVATION.

This reservation comprises a fine body of land, and the Indians are contented and industrious, raising every thing they need. Many of them work in the coal mines and hire out to the neighboring farmers, receiving the highest wages. They own a large number of cattle, horses, hogs, chickens, ducks, geese, &c. A good substantial church has been built, and daily service presided over by an excellent old chief, David Crockett; besides they are frequently administered to by different Catholic priests, nearly all the Indians being of that denomination.

This reservation should be given to the Indians in severalty, as they are entirely capable of managing a little farm for themselves, and all are anxious and eager to have their lands surveyed into small farms, that each may know what belongs to him.

#### SWINOMISH RESERVATION.

This reservation is described in the treaty as comprising the southeast peninsula of Perry's or Fidalgo Island, and has been, and is still, the source of much vexation and trouble, and voluminous correspondence with the Department. Taking the map of this reservation, as laid down by Governor I. I. Stevens, who made the treaty, there can be no doubt as to the boundaries; but it is asserted that the map, as made by Governor Stevens, and filed in the land and surveyor general's office, is incorrect. A survey has been made lately, which describes a bay never before shown, running far up into the island, (see accompanying map marked A;) and it is contended that this is the narrowest point, and that the initial point should be taken from the head of this bay. Accepting this as the boundary, it would throw all the settlers in the northwest portion of the peninsula off the reservation. I present this matter for the consideration of the honorable Commissioner, hoping that it may be speedily settled. I am of the opinion that Governor Stevens knew what he was doing, and had his map made in accordance with the understanding had with the Indians.

About seventy-five Indians live here, the most of whom are worthless and degraded. No employé resides there, as the agent was obliged to take him away for service on the Tulalip.

I repeat my former recommendation, that the reservation be surveyed and sold for the benefit of the treaty under which it belongs, and the Indians transferred to the Lummi, they being connected and well acquainted with the people of that reservation, and no difficulties would arise by reason of their removal.

I would also recommend, in justice to these old settlers, that they be given the preference over all others in buying their homes, many of them having lived there for the past ten years.

## MUCKLESHOOT RESERVATION.

The title to this reservation is of a doubtful character. It consists of two sections situated near the forks of Green and White Rivers, and was formerly a military reservation; was transferred by the last commander to the Indian Department and has been held by it ever since. In 1868 many rumors came to me, by letter and otherwise, of anticipated trouble with these Indians, as it was in this section where the Indian war commenced before. On account of surveying this section of country, and the whites threatening to take claims immediately on the forks of these two rivers which was claimed by the Indians, I deemed it advisable to take the land in the forks of the rivers mentioned as an addition to the reservation, and by so doing, no doubt, avoided trouble. What I did I reported to the Commissioner of Indian Affairs, and it was apparently approved, as I heard nothing more about the affair.

Emigrants are now coming in and the same trouble is again threatened. I would ask some definite information on the subject.

A small church has been built on the reservation by the Catholics, and occasionally the people are gathered together for worship by a priest.

Sub-agent E. C. Chirouse, who is in charge of all the reservations under the Point Elliott treaty, has devoted the better part of his life to the amelioration of the condition of these Indians, and there can be no doubt of his integrity and honesty in conducting the affairs of his agency.

## MEDICINE CREEK TREATY.

Under this treaty there are three reservations, viz: Puyallup, Squaxon, and Nisqually. I would again call attention to the fact that the Indians under this treaty are without an agent. After the resignation of Agent Howe the Point Elliott and Medicine Creek agencies were placed under the charge of one agent. It however was found impossible for a single agent to attend to the duties of both, and, therefore, the Medicine Creek was taken under charge by this office.

The last Congress appropriated funds for the pay of sixty-two agents, six of them for this territory, whereas we have only three full agents. I most earnestly recommend that an agent be appointed to this agency.

## PUYALLUP RESERVATION.

At this reservation, on the Puyallup River, where it empties into Puget Sound, are all the Government buildings, and where the employes reside. It contains about 23,000 acres of land, much of which is excellent, and a portion covered with fine timber. Mr. B. Barlow, the farmer in charge, is an able energetic man, and has accomplished much more in the short time he has been there than I had expected.

## SCHOOL.

The school, under the charge of Mr. Thompson, numbers at present only eleven; is quite creditable, the children having progressed quite rapidly. Arrangements are now being made to increase the membership to about twenty-four, taking an equal number of either sex. Great need is felt for a suitable house, the present structure being totally inadequate.

I would most earnestly recommend an appropriation of \$2,000 for the

building of a school-house. Many new buildings have been erected by the Indians during the past eight months.

#### SQUAXON RESERVATION.

This reservation is an island some twelve miles distant from Olympia; it contains but little good land, and is only valuable for its timber. About one hundred Indians live there and at Olympia, and, with a few exceptions, are degraded. No employé lives among them, it being thought advisable to concentrate all that force at one reservation.

As in my former reports, I would advise the survey and sale of this island for the benefit of the treaty to which it belongs, viz, Medicine Creek, and the removal of the Indians to the Puyallup, where there is plenty of land for all, and where their relatives reside.

#### NISQUALLY RESERVATION.

This reservation contains about 5,000 acres, which is principally prairie, almost useless for agricultural purposes, but affording good pasturage for sheep; there is, however, some good land in the Nisqually River bottom, where they raise wheat in considerable quantities, also potatoes, turnips, carrots, and oats. Many of the Indians are good workers, and are employed by the surrounding farmers. Others are shiftless, spending much of their time on horseback, wandering from place to place, visiting relatives and acquaintances.

#### YAKAMA AGENCY.

This reserve is by far the best in the Territory, being about forty by sixty miles in extent, and is well adapted for farming and grazing. It has been assigned to the methodist denomination, and James H. Wilbur, the agent, is an energetic, zealous man, well adapted, both mentally and morally, for the position which he occupies, his knowledge of Indian character having been obtained by long experience among the people of his agency. He has built churches, which are well attended, the service being conducted by native preachers. No school has been in operation since the reinstatement of Mr. Wilbur, for reasons given in his report, he, however, expects to reopen the school on an extensive scale, when much good will no doubt be accomplished. Although the reservation is far behind what it was two years ago, when Mr. Wilbur was relieved, (see Agent Wilbur's report,) I am satisfied that by his thorough knowledge and understanding of the situation all lost ground will soon be recovered, and the marked improvement made conclusively prove the present Indian policy a success.

I would recommend that the lands of this reservation be surveyed and given to the Indians in severalty.

#### SKOKOMISH RESERVATION.

This is the only reservation under the treaty of Point-no-Point, and is under the supervision of the Congregationalists, Edwin Eells, agent. It is well adapted to agricultural purposes and the Indians raise quite extensive crops; there is also an abundance of excellent timber, from which they are, under the direction of the agent, realizing handsomely from the sale of logs, they doing most of the work themselves.

I would call attention to letter, inclosing map, dated March 5, 1868,

in which I proposed a small addition to this reservation. The ground asked for is high land, situated along the water, and used by them for winter quarters, the ground on the reservation along the river overflowing at certain seasons and being damp and wet in the winter.

The school has not been a success, but I think under the management of the present agent, a zealous and earnest man, something will be accomplished.

I would recommend that this reservation be surveyed and given to the Indians in severalty.

#### MAKAH RESERVATION.

The only reservation under this treaty is situated in the extreme northwest of the Territory, and at present is presided over by E. M. Gibson, of the Christian Church, a very estimable gentleman, who, I think, is devoted to the business undertaken by him, possessing good health and full of the missionary spirit. I expect much good to result from his administration. The Indians are a bold, hardy race, getting their subsistence principally from the ocean, and caring but little about tilling the soil, and it is with the utmost difficulty they can be persuaded to work for the small wages of \$1 or \$2 per day, while they not unfrequently make as high as \$40 by taking the fur seal.

The buildings are good, but not of a sufficient number for the wants of the employes. The school building is ample and every way suited to a male and female school. So far the school is not a success, but Mr. Gibson is sanguine of making it so.

Much has been written and said about this reservation. Some ten persons have taken claims, and assert that it was by permission of the late agent, Captain J. H. Hays. Two of these claims are on the original reservation, and the balance upon the extension made by late Agent Webster, the same having been surveyed and reported to the Department. On this extension are all the employé buildings, farm, farmhouse, barns, roads, &c.; in fact, for years the Government money has been expended on this addition. The parties taking these claims cannot plead ignorance, for nearly all of them have been employes on the reservation, and are now attempting to appropriate to their own use the improvements that they have been paid by Government in times past to make. Without this is decided to belong to the Indians, there would be no land for cultivation or pasturage to graze cattle. I cannot think that Governor Stevens would so far stultify himself as to provide in his treaty with this people for an agricultural and industrial school, and give them nothing but barren rocks. For particulars I refer to the report of the agent, also the accompanying map.

#### QUINAIELT RESERVATION.

This agency is under charge of the Methodists, G. A. Henry sub-agent, an earnest, Christian man. It is progressing, though not enough time has passed to make any very marked change. The school is doing pretty well and bids fair to be successful. The strong prejudice against sending their children to school is being gradually broken down, and scholars are slowly coming in. The plan of trying to make a farm on the prairie, where the agency houses were first built, has been abandoned, it being found entirely too wet. Ground is now being cleared along the river bottom, and farming has been conducted with considerable success. I look for great improvement in the condition of these people under the administration of Agent Henry.

## INDIANS PARTIES TO NO TREATY.

The Indians under this head reside in the northeast and southwest portions of the Territory, and those in the northeast are in charge of W. P. Winans, farmer in charge; an assistant farmer and a physician are also employed.

The importance of making some arrangement with these people for a surrender of their lands daily becomes more apparent as emigration sets in. Many of them have settled on valuable tracts of land and are good farmers, raise extensive crops, make good improvements, and own stocks of cattle and horses.

Peace has thus far been preserved by means of a liberal policy, distributing agricultural implements, blankets, seeds, medicines, &c., among them. With the influx of population these people are being crowded out, and some of them have had their places taken from them. I fear trouble will arise if some understanding is not had for a peaceful surrender of their lands, as constant rumors and complaints are reaching me.

The accompanying able report of W. P. Winans, farmer in charge, gives a full history of this people, and the map a correct idea of the extensive country now occupied by them.

In my annual report of 1869 I recommended as follows, viz :

That a tract of suitable dimensions, including the fisheries south and west of the Hudson's Bay trading-post, (Old Fort Colville,) be set apart, and in the event that the pending negotiations shall result in a surrender of the possessions of that company to the United States, that the buildings now occupied by the company be reserved as agency buildings. Kettle Falls, near this station, is a favorite salmon fishery, where thousands of Indians resort every year during the fishing season, and this fact makes the locality all the more valuable as an Indian reservation. This reservation should be at least forty miles square, and should be located west of the one hundred and eighteenth meridian, and north of the forty-eighth parallel.

Since that time the negotiations spoken of have been completed, and the Hudson's Bay trading-post now belongs to the United States, and I would urge the setting apart of this tract of land as a reservation.

## CHEHALIS RESERVATION.

This reservation contains about 5,000 acres of land, most of which is excellent for agricultural purposes. It is situated in the forks of the Chehalis and Black Rivers. The Indians living on the reservation and on the Chehalis River and its branches number about six hundred, and have never been treated with. They are under charge of a farmer and an assistant farmer, and are rapidly advancing in civilization. They raise quite extensive crops of cereals, also potatoes, turnips, peas, &c.; have cattle and horses in abundance; are excellent field-hands, and are extensively employed by the surrounding farmers as laborers, getting the highest wages.

The school-house commenced in time past by myself, and nearly brought to completion by my successor, has never been occupied as a school, on account of the lack of funds. I would ask an appropriation of at least \$5,000 from the civilization fund, for the inauguration of a school for males and females.

I would also urge that Congress fix the status of this reservation. It was taken some eight years ago, surveyed, and all the settlers then occupying bought off by the Government, and has been used and improved as an Indian reservation ever since; notwithstanding, it has never been recognized as such by an act of Congress.

Emigrants possessing a knowledge of these facts have turned their attention to it, and threaten to lay claim to the same.

In conclusion, I would return thanks for the continuous courteous manner with which all communications had with the honorable Commissioner have been marked during my connection therewith.

I have the honor to be, very respectfully, your obedient servant,

T. J. MCKENNY,  
*Superintendent Indian Affairs, Washington Territory.*

## No. 2.

### NEEAH BAY INDIAN AGENCY, *Washington Territory, September 1, 1871.*

SIR: When I assumed charge of this reservation, on the 1st of June last, I found it in a very unsatisfactory condition; two of the employes were away—the farmer for the purpose of purchasing cattle for his own use, and the blacksmith for the purpose of cultivating land of his own. Upon their return I immediately discharged them and appointed others.

There were thirty-eight head of cattle belonging to the reservation; they were all grazing upon the prairie with quite a large herd of other cattle, and in the absence of the farmer it was almost impossible to tell which the Government cattle were, as some of them had not been branded; they were looking well and are in good condition now.

The buildings were very much out of repair, and presented rather a dilapidated appearance; they consist of a dwelling-house for the agent, a small-house for the employes, a school-house, stable, canoe-house, and wood-sheds. There is also a farm-house, a tolerable good log barn, with comfortable cattle-sheds, and other out-buildings upon the farm, about three miles from the first-named group. The farm-house is in bad condition, and will require repairing before it is fit for occupation. I have had all the other buildings repaired, thoroughly whitewashed, and painted so far as I had material for that purpose.

In consequence of the lack of building-room, one apartment in the

house occupied by the employes has to be used as a blacksmith shop, and a part of the stable has to be used as a carpenter shop. The agent's house was built to be used as a carpenter shop, but was afterward converted into a dwelling-house; it is small and very inconveniently arranged. The agent under whose direction the buildings were erected never resided upon the reservation, and consequently there was no necessity for a dwelling-house for him.

The artisans' tools and agricultural implements were in bad condition, being rusty and some of them almost unfit for use; they were scattered over the place in a very careless manner; the plows are of a very old pattern, and would not be used by any respectable farmer of the present day.

A crop of about 18 acres of potatoes, 5 acres of oats, 2 acres of cabbages, carrots, turnips, and other garden vegetables had been planted, but had made but little progress, and the weeds had grown so thick and fast that it looked like a very successful attempt to raise a crop of that kind. The employes, and much of the time two or three Indians, have been at work almost constantly, plowing, hoeing, and pulling weeds, and we have succeeded in making a pretty fair crop, but not more than half what could have been raised had the seed been properly put in and attended to early in the season. I estimate the harvest as follows: Potatoes, 2,700 bushels; turnips, 100 bushels; carrots, 75 bushels; beets, 10 bushels; cabbages, 1,000 pounds; oats made into hay, 3 tons.

It is impossible to know how many acres the Indians have in potatoes, as they are in little patches scattered ten or fifteen miles along the coast, but I should think at least fifteen acres. They are entirely unskilled in agricultural science, and do not produce more than one-fourth of an average crop; they know but little about using the hoe, and it seems almost impossible to learn them.

Most of the Indians have been away nearly all summer catching and drying fish. They have been peaceable and quiet excepting on several occasions when whisky was brought among them and a number of them became intoxicated. The whisky is generally brought here by Indians who live on Vancouver's Island, and with whom the Makahs carry on commercial and social intercourse. Many of the Makahs will not drink whisky, but most of them are very fond of it, and will drink whenever they can procure it, and, if not punished, would soon become unmanageable and dangerous. At present there is no way to punish them except to send them away to prison, which would involve a great deal of time, trouble, and expense. A block-house should be built at the agency.

A mild form of slavery still exists among them, and it seems almost impossible to abolish the system; those held as slaves fare as well as their masters, and will not leave them. I endeavor to convince them that they all have equal rights and privileges. They have but vague ideas of morality and religion; polygamy, pressing the heads of infants, and gambling are customs they cling to very tenaciously, and it will take some time to obliterate them.

The general health has been very good, but many of them are afflicted with scrofulous diseases which are so deeply rooted in the system, that they seem to be incurable in many cases.

When the agency was established, it was discovered that there was no agricultural land upon the reservation, and not even a suitable place for the erection of necessary buildings for the agency; therefore the agent recommended that the reservation be enlarged, in order that the provision in the treaty for the establishment of a farm for the

benefit of the Indians might be carried into effect. A survey was accordingly made (as I am informed) by direction of the agent, and a tract containing about 3,500 acres of land was added to the reservation, upon which there is a small marsh-prairie, which affords good pasturage for the cattle all the year, and without which they would have to be sold or otherwise disposed of. The reservation farm and all the improvements that have been made, with the exception of the school-house, are upon ground included in this addition to the reservation.

Recently several persons, some of whom were formerly employés upon the reservation, have taken claims upon this land, and have brought quite a large number of cattle upon it, and they have informed me that they would not have done so had they not been informed by my predecessor that they had a perfect right to take the land. The Indians claim this land, and most of them live upon it, and they will not relinquish it willingly; it is very embarrassing to me, as I have no authority to order them away, and they are encroaching upon what has always been considered a part of the reservation. It is a matter of actual and pressing necessity that the Government should settle the question as to whether this land, upon which most of the money appropriated for these Indians have been expended, is or is not to be a part of the reservation. Nearly all the arable land of the reserve is upon this addition, and without it nothing can ever be done by these Indians in the way of farming.

When I came here I found a poorly organized school of nine male scholars. There were only six in regular attendance, and they had made but little progress. They were able to read a little in the first reader, and spell words of three or four letters. I regard the school as the most important part of the Indian service, and have done all I could to aid the teacher in reorganizing and enlarging it; and although it is almost impossible to induce the children to attend, I have strong hopes that great improvement will be made during the coming winter. At present there are sixteen scholars in attendance. The parents, with few exceptions, do not want their children to attend school, or be like white people.

I think the school here has been more in name than in reality, as I do not find any of the older Indians who are able to read or write, and the moral influences of civilization have evidently never been brought to bear upon them.

Nature supplies them abundantly with nearly all the necessities of life; consequently they do not appreciate what they receive from the Government. They are the most happy and independent people I have ever seen. They catch plenty of the finest fish, which they dry in great abundance for winter use. They take several kinds of shell-fish, which are unlike anything I have ever before seen, and which they eat with great relish. They catch a great many dog-fish, from which they make oil; and seal, from which they obtain both fur and oil, which they barter to the white traders for clothing, flour, and such other articles as they may need.

I would recommend that an appropriation of \$2,500 be made for the purpose of building a saw-mill upon this reservation. With that amount a mill could be constructed of sufficient capacity to supply all the lumber needed upon the reservation, and for building houses for the Indians, which they greatly need. At present all the lumber used upon the reservation is brought a distance of more than a hundred miles. These Indians have no means for the conveyance of lumber except by canoes, which is extremely hazardous, and requires a great deal of time. If

lumber was easily obtained, they would all gladly build new houses ; and if such buildings should be constructed as are actually needed upon the reservation, it will be a great saving to the Government in the end.

I have the honor to be, very respectfully, your obedient servant,

E. M. GIBSON,

*United States Indian Agent.*

Hon. T. J. McKENNY,

*Superintendent of Indian Affairs,*

*Olympia, Washington Territory.*

No. 3.

SKOKOMISH RESERVATION, W. T.,

*August 31, 1871.*

SIR: I have the honor to submit the following annual report for the fractional year ending August 31, 1871:

On the 1st day of June, 1871, I assumed charge of the Indians belonging to this reservation. I found but very few residing here, not exceeding two hundred, and most of them very poor. Scarcely any planting had been done either by the Indians or on the reservation farm. The buildings on the reserve were in a dilapidated condition, two of them being entirely unfit to occupy. There were three framed dwellings and a large framed school-house barely fit to occupy, while one framed house, entirely unfinished inside, was filled with oats and rubbish, and one log-dwelling was occupied by an Indian, and leaked badly. The frame of a barn was up and partly inclosed, also a shed used for a stable. There were besides a carpenter shop, a blacksmith's shop, and a block-house. There had been in previous years near 100 acres of land cleared, set in grass, and otherwise cultivated, but half of it had been left to grow up to brush again and was entirely wild. The reservation farm proper contains about 25 acres. The Indians cultivate about as much more. The Indians say that, during the occupancy of this reservation by the military, this land was all taken from them, and in consequence they became discouraged from doing anything, suffered severely for want of food, and many of their animals perished for want of hay.

On my arrival here all the previous employes except the carpenter immediately resigned. During the month of June I filled all the positions except that of assistant teacher. A little gardening was then done. The houses have since been repaired and thoroughly white-washed. The barn has been raised and prepared to hold the hay. About 50 tons of hay has been cut by the employes and safely housed, and near the same amount has been cut by the Indians on their own land. There will be near 600 bushels of potatoes on the reservation farm, and perhaps 200 bushels raised by the Indians. There is an orchard on the farm containing about — trees, mostly bearing, also large quantities of shrubbery of various kinds. There will be a considerable quantity of apples, but I am unable to give anything like an estimate of the probable amount. The Indians who are here have been industriously at work getting out logs for the saw-mills, and have got out over 700,000 feet of lumber, bringing in a return of over \$3,000, which has been divided among them after deducting the expenses for

provisions and feed of team, and 50 cents per thousand, which I have taken to make a fund to provide for the poor and needy.

The school I found in a very deplorable condition. Only five boys were in attendance, and they were nearly destitute of clothes. There were on hand no supplies of any kind, nor any dishes or utensils for cooking, nor any funds to get the necessaries for carrying on the school. In this condition of affairs I directed the teacher with his boys to assist in the work on the farm and the building a large proportion of their time. I found, also, that the management of the school had been such that the Indians were very averse to sending their children to school. Proper treatment and time is all that can overcome this feeling on their part. There is also need of more room for the proper carrying on of the school. At present there is not a good audience-room on the place, nor any sitting-room for either the boys or the girls.

Over 600 of the Indians belonging to this treaty reside at distances varying from fifty to one hundred and fifty miles from here. This they are allowed to do by the treaty. For this reason it is impossible to give anything like a correct statistical statement of them or their products. The tables forwarded in connection with this report are necessarily meager and unreliable, being purely from estimates made on no basis whatever but the merest guess-work.

During the summer a destructive fire accidentally caught in the Indian village, destroying the tenements of forty-five persons, also considerable amounts of property in the way of household goods, clothes, &c.

In conclusion, I would say that the condition of the Indians is such that their advancement must be necessarily slow. The fact that by the terms of the treaty they are allowed to roam about so much to get fish, upon which they chiefly subsist, militates greatly against their settling down to habits of civilized life. It also brings them in contact with unprincipled white men, who do not hesitate to sell them liquor, and commit other vices which bring on premature disease and death.

I have the honor to be, very respectfully, your obedient servant,

EDWIN EELLS,

*United States Indian Agent, Washington Territory.*

General T. J. McKENNY,

*Superintendent Indian Affairs, Washington Territory.*

---

No. 4.

OFFICE YAKAMA INDIAN AGENCY,  
WASHINGTON TERRITORY,  
*Fort Simcoe, August 10, 1871.*

SIR: I have the honor to submit the following report, which, owing to the short time since I resumed my duties as agent, will not be as full as might be desired.

I entered the Indian service first as superintendent of teaching, in the fall of 1860, and as Indian agent in 1864. From the first I have had but one idea in respect to the true import of the service. I have known the common sentiment of the country regard the Indian race as doomed to extermination; that it expects no high results from the appliances of the Indian Bureau, in the way of ameliorating either the moral or material condition of the race. So deeply seated and universal is this feeling that it is useless to try to make anything of an Indian more than

an ignorant savage; that all direct and positive endeavor to instruct and benefit him, is scouted as a vain and foolish attempt; and out of this feeling grows a tacit justification in the minds of Indian officers not only, but in the mind of the country generally, of that loose and inefficient, not to say dishonest, way of conducting the Indian service which has brought it into so great disrepute. The argument is, if the Indian will be savage in spite of the most faithful and honest appliances of the means appropriated for his benefit, then it were as well to divert those means to the political and personal advantage of those to whom they are intrusted. This argument has given rise to practices in the administration of the affairs of the department that have entitled it too often to the opprobrium of a political machine, and the appropriations by which it is manipulated to that of a corruption fund.

I have always taken direct and practical issue with this popular heresy. I believe, and always have believed, in the manhood of the Indian, and in the possibility of elevating him to a high state of civilization. The fact that the Government service has so generally failed in his improvement is no mystery to me. Looking at the question from a Christian standpoint, I cannot see how the result could have been different from what we see it; nor do I find the failure chargeable to anything inherent in the Indian character. True, he is ignorant, treacherous, and cruel by nature; he is destitute of moral character; he is poor in every respect. He needs everything that enters into the comforts of civilization, but his first great want is character. Failing to give him character, all material gifts but hasten his degradation, and render his future destruction more positive and complete. I repeat, the first great want of the Indian is character. As a Christian teacher, I have believed in the possibility of giving him this first indispensable condition of civilization. I have known I could inspire virtue in the Indian only by the plain, open, unequivocal manifestation of virtue on my own part in all my intercourse with him. I entered the service in the first place as a Christian teacher, and have since endeavored to administer the affairs of the agency on Christian principles. I would as soon put wolves among sheep, or rattlesnakes among children, as immoral men upon an Indian agency. Reformation of moral character has been the great point at which I have aimed. When I contrast the condition of the Indians of this agency with what they were eleven years ago, when I first came among them, I find the result of my labors a perfect justification of my theory, in respect to the possibility of giving to the Indian race the comforts and respectability of civilized life. From the time I took charge as agent in 1864, to the day of my suspension, and turning over to Lieutenant J. M. Smith, September, 1869, all branches of business on the reservation were marked with progress, and the work of moral reform, though slow, was gradual and certain. From that time to my resuming my duties, January 1, 1871, every interest, material and moral, was waning.

Employés were paid for services long before reaching the reservation, and with the influence they exerted in dancing, swearing, drinking, and card-playing, the interests of the reservation were rapidly declining.

The cattle belonging to the Indians, when I left the agency, numbered 1,600. The natural increase would have been about 600. When I returned there was not more than 350, old and young. These cattle were worth \$25 per head; add 600 to 1,600 and you have 2,200, at \$25 per head, making \$55,000; deduct the price of those found, \$8,750, and you have \$46,250 loss in latter; or, say nothing of the increase, and take 1,600 head at the price above, and you have \$40,000; deduct the price

of those I found when I resumed my duties as agent, \$8.750, and it makes the loss in cattle \$31,250. This is a fair index of how other things were managed under the administration of my predecessor for sixteen months.

Had the Indians been protected against dishonest traders from without, and a species of robbery within, they might to-day stand up and compare property with white settlements of the same number, and show equal wealth.

Some of the Indians that were doing well when I left the agency, under the military administration left their farms and the reservation, and did not return until last spring. There was a universal dissatisfaction with the better class of Indians under the administration of Lieutenant J. M. Smith.

I am pleased to say that the Indians professing religion, numbering about 300 at the time I left, maintained their piety amid their persecution, with but little loss.

*Schools.*—When I left the reservation, I turned over to my successor \$1,200 school fund. The annual appropriation was \$3,200, making \$4,400. On resuming my duties, I found no school, only on paper. The boarding-house that had been used for the convenience of the school was changed so as to make it impossible to gather the children. The funds appropriated for schools had been used in other ways. There was no lumber to fit up any other boarding-house, and no food to subsist the children or funds to clothe them, so I was obliged to defer the opening of the school until we could cut and haul logs and make lumber, sow seed and reap a harvest. Our school-room and boarding-house are being put in order, and in a few weeks we expect to open a school upon an enlarged plan.

On entering upon my duties as agent, I found a destitution of wood for the station, but little stock of any kind for the shops, and business of all kinds near a stand-still. As soon as I became acquainted with the employés and the general condition of things on the reserve, I determined to make changes, and in less than one week I relieved six of the employés I found when I came. We were destitute of seed to sow, and the Indians were destitute of seed and food.

*Money furnished.*—With money furnished by the superintendent, we purchased seed for the Indians and for the agency farms, thereby inducing many of the Indians to return that were away, and are now industrious, and have reaped a harvest sufficient to meet their coming wants.

*Breaking land.*—We have broke about 100 acres of new land for the Indians this season, worth \$300.

*School farm.*—During the summer we have put the school farm in good condition, dug a drain of more than half a mile, and grubbed out about 15 acres of very excellent land, at a cost of \$250.

*Wheat raised.*—At the department farm we raised 800 bushels of wheat, worth \$1 25, \$1,000.

*Oats.*—We harvested and thrashed 500 bushels of oats, worth 75 cents, \$375.

*Corn.*—One hundred bushels of corn, worth \$1, \$100.

*Hay cut and hauled.*—Seventy tons of hay have been cut and hauled, worth \$10 per ton, \$700.

*Straw stacked.*—Sixty tons of straw have been stacked, worth \$3 per ton, \$180.

*Coal burned and hauled.*—We have burned since January, 1871, 1,200 bushels of charcoal, worth 25 cents per bushel, \$300.

*Potatoes and vegetables.*—These are not harvested, but we have raised enough for the uses of the agency.

*Repairs of agency buildings.*—During the season we have repaired the dwelling-houses of the employés, the school and boarding-house, at an expense, at least, of \$500. We have built one house for an Indian; labor worth \$100.

*Mills.*—The reservation mills are in good running order. I have given them this season a general overhauling. We have put in a new wheel at the saw-mill, and made other repairs, at a cost of about \$250.

*Harness-shop.*—Some of the boys that have been in school in years past have been instructed in harness-making, so that now they are capable of cutting and making team-harness for the agency teams and for the Indians. During the first and second quarters these Indian boys made twenty-eight sets of team-harness, which have been issued to the Indians. All the repairs of the harnesses for the agency teams and the Indians are done by the Indian boys.

*Wagons.*—I have been obliged to purchase three new lumber-wagons, as our old ones were not sufficient to do the work of the agency. The destitution of timber to build wagons, and the great amount of repairing there is to do on the Indian wagons, make it inexpedient to put up new work here, as the wagon-timber would have to be transported 165 miles.

*Catholic mission.*—There has been within a few years a Catholic mission established a little over the line of the reservation. They succeed in drawing off a few of the Indians and instructing them that marriages solemnized, baptisms administered, and religious instruction given by the agent is invalid and should not be regarded. It seems to be the object of those in charge of said mission to keep the Indians, so far as they can, in a feverish and dissatisfied state. This teaching is doing the Indians an injury, and tends directly to keep them from settling upon the reserve; to make and keep up a difficulty between the Indians and the white settlers around the reservation. Petitions, numerously signed by the settlers around said mission, have been sent to me, complaining of the Indians, and urging me to put a stop to their congregating at that place. I think there is not more than one in ten belonging to this reservation that sympathizes with them, though Colonel Ross, in his *knowing* report of last year said, "three-fourths of all the Indians were Catholics." There is more danger of difficulty between the whites and Indians from this quarter than all others put together.

*Indian labor.*—It will be seen by our monthly reports that very much of the work of the agency is done by the Indians. My object is to bring as many of them into the service as we need to accomplish the business of the agency, with as few white men to instruct and assist in the work as is allowable. This gives them the knowledge they need, makes them industrious, and furnishes means for their subsistence and general improvement. In conclusion, I have to say, give the Indians the amount of means appropriated by the Government from year to year, give them agents and employés whose examples are worthy of imitation, instruct them that it is honorable to work and to pray, and you start them upon an upward grade to civilization, and to become sons and daughters of the Lord Almighty, living without rebuke in the midst of a crooked and perverse generation.

All of which is respectfully submitted.

JAMES H. WILBUR,

*United States Indian Agent, Washington Territory.*

General T. J. McKENNY,

*Superintendent Indian Affairs, Washington Territory.*

## No. 5.

TULALIP INDIAN RESERVATION,  
*September 20, 1871.*

SIR: I have the honor to herewith submit my first annual report of this agency since it has been under my charge, which has been since the 1st of last April. I can add but little, having already given full details in two former reports, which I forwarded to the honorable Commissioner of Indian Affairs through you.

It is to be regretted that the Hon. Mr. Brunot and yourself, during your recent visit to this place, had no time to see Priest Point, the birth-place of our Indian school and the finest portion of the reservation. I regret, also, that you could not have shaken hands with our regenerated and truly Christians of Port Madison reservation, who were anxiously looking for you, and were ready to salute you with a hearty welcome; but, notwithstanding, I think the honorable president saw enough to convince himself of the miserable state in which I found the agency, and I need not repeat.

When I first took charge, the Indians asking me what I would do for them, I said, "Wait and see;" that I did not want to make too many promises, lest I might disappoint them.

Now all, both good and bad, express their satisfaction in saying that they were very glad, and are very happy to see their new farm opening, their saw-mill nearly ready to saw lumber, and to hear that their small grist-mill is on the way here from San Francisco. They seem to be especially well pleased and much encouraged in seeing that they get every cent of what they make in working on the reservation, and many of them, finding that they can make and save more on the reservation than anywhere else, are well pleased, and prefer to stay at home and abandon their former meandering life.

I hope I will be able to begin draining the marsh this fall and continue the work next spring, if not possible in the winter. All the Indians express their earnestness to assist me in the work.

I have the same employés I had when you were here; but Mr. Spithill, our farmer, has sent in his resignation, to take effect at the end of this quarter. I must state that his leaving the service will be a misfortune to the reservation. He is a strict disciplinarian, and drives his work ahead with a great force, which are the principal reasons for the dislike the Indians cherish him. He is severe, it is true, but not unnecessarily so. Besides the regular employés, I have an extra carpenter helping on the building of the mill, and six other white men to help and teach the Indians to work properly and earn their own living. All those white men are of different religious sects, but they are all good, honest, and industrious citizens.

Our young Indians all say they would like to have a reservation with more prairies than this has. Those of them who have visited the reservations east of the mountains are charmed with them, and feel somewhat discouraged in returning to their heavily timbered and sterile-soiled country. They represent that their eastern or transmountain brothers can accomplish more in one month working their rich prairie land than they can do themselves in two years on their heavily timbered reservation. They are right in saying so; but, notwithstanding the great disparity of natural advantages, the willingness of our Indians to work encourages me to hope that, if time and means are given us, our Indian youths will in a few years be able to support themselves. The monthly reports of the employés will show you the amount of labor

which has been done since I took charge. As I do not know what crops were raised last year, and as this year crops were put in so late that they have not yet been harvested, I am unable to give you any statistics in relation to our agricultural or farming products, and will have to defer the matter until I send you my next fiscal report. Our old school-boys who have left the reservation are, generally speaking, better than other Indians. Some of them who live with the uncivilized Indians have become like them; but, as you have recently witnessed yourself, they do not easily forget their early discipline, and are easily induced to return to the paths of rectitude and virtue. In connection with this part of my report, allow me to tender you my sincere thanks for the assistance you have rendered me in returning some of those boys and other disordered Indians to the reservation and to duty.

On account of absence from the reservation for the purpose of attending matters at the Port Madison reservation, I have been unable to send this report sooner.

I remain your very respectful servant,

E. C. CHEROUSE,  
*Indian Sub-Agent.*

General T. J. MCKENNY,  
*Superintendent Indian Affairs, Olympia, Washington Territory.*

---

No. 6.

QUINAIELT INDIAN AGENCY, WASHINGTON TERRITORY,  
*September, 1871.*

SIR: In compliance with the regulations of the Indian Department, I have the honor to submit my first annual report.

I commenced the duties of sub-Indian agent at this agency on the 31st of March, relieving Thomas H. Hay, the former agent. I found the agency in a condition much improved. In addition to the land partly cleared by my predecessor, we have slashed three acres. The Indians have cleared about eight acres, which, with the assistance I have given them, they have sown to oats and hay. I have also planted the agency farm in oats, peas, potatoes, and other vegetables. We have also raised sufficient potatoes and other vegetables for summer use.

I estimate the crops to be gathered to be as follows: Oats, 80 bushels; potatoes, 800; turnips, 200; beets, carrots, and parsnips, 100 bushels; cabbage, half a ton. We have cut 2 tons of timothy hay, besides about 6 tons of wild grass. The season has been unfavorable; owing to the late rains in the spring and drought during the summer, a portion of the crop was almost a total failure.

We have built an addition to the agent's house, also an office, which was much needed. A room has been added to the school dwelling for the accommodation of the girls. A wood-shed has been built, and the school-grounds inclosed with a picket fence.

The buildings for the employes are old and need a general repairing. The procuring of material for building purposes is attended with much difficulty, as the nearest saw-mill is sixty miles distant. The lumber used in building thus far is heavy fir, which was purchased by Agent Hill in 1866. The shingles and finishing lumber are got out by the employes.

The road over Point Greenville is impassable during most of the winter for wagons, being washed by the heavy tides and storms where

it leaves the beach, so that teams cannot get up or down. For this reason it is important that all supplies for the winter and spring should be secured by the 1st of November, as the teaming from Point Brown, thirty miles south of the agency, (where all goods have to be landed,) must be governed by the tides, which in winter is very difficult, and at times dangerous.

I would here call your attention to a circular letter, received from the Commissioner of Indian Affairs, relating to the purchase of goods and freight thereon, there being no direct means of transportation from Olympia, where supplies for the agency are purchased. I am compelled to employ farmers and Indians in transporting goods to Point Brown. Goodsshipped from Olympia for this agency have first to be hauled thirty-five miles over a rough road to the nearest point on the Chehalis River, thence by canoes thirty miles down the river to Montesano, where they are again reshipped in boats suitable to navigate Gray's Harbor, and landed at Point Brown at a cost of from \$35 to \$40 in coin per ton, and it is difficult to get goods freighted at these rates. For this reason I am unable to get goods transported and comply with the restrictions contained in the circular referred to. I would therefore respectfully ask for instructions on this subject.

I have succeeded in persuading the Indians to turn their attention to cultivating pieces of land, in which they succeed well. The land is covered with heavy timber and brush, and requires a great deal of labor to clear it up, but, when cleared, produces well. Many of the Indians will raise plenty of vegetables to keep them through the winter. The condition of the Indians living at the agency is much improved. They are in a better state of health, and more cleanly in their habits; are leaving off many of their superstitious ways, and are taking some interest in civilization.

For their sanitary condition I refer you to the report of the physician, who is a faithful employé, and is trying to benefit these people in health and morals.

Only a portion of the Indians belonging to this agency live on the reservation. The Qeetes, Hohes, and Quillehutes are still living on the rivers from which they are named.

The total number of Indians, parties to this treaty, as taken from last year's census, was 532. Since then, from the best information I can get, there has been 11 deaths and 18 births, showing an increase in their population of 7.

The school is in charge of a competent teacher, and the children are well-behaved, and making satisfactory progress in English. They are well fed and comfortably clothed.

A good feeling exists between the Indians and employés.

In conclusion, I shall endeavor to carry out the present policy, and assist the Department to improve the condition of these people.

I herewith transmit the annual reports of employés, statistical returns of education, farming, and crops of the reservation.

I have been without a blacksmith until since the 1st of August; consequently I have no annual report from that department.

Thanking you for the kind and courteous treatment received, both officially and personally, I subscribe myself,

Very respectfully, your obedient servant,

O. A. HENRY,  
*Sub-Indian Agent.*

T. J. McKENNY,  
*Superintendent of Indian Affairs, Washington Territory.*

## No. 7.

QUINAILET INDIAN AGENCY,  
*September 11, 1871.*

SIR: I have the honor to submit my first annual report of the school under my charge.

I took charge of the school on the 13th of April. I am, therefore, unable to report a marked improvement in the school-room.

I opened the school with an attendance of eight scholars present, others being absent with their parents. I have reasonable hopes of obtaining an attendance of fifteen scholars this winter, when their parents return from their excursions. This seems small in proportion to the number of Indians belonging to this reservation, but the inaccessibility of the tribes north of the agency is one of the causes of so small an attendance. In my opinion the mechanical arts and agriculture is of more importance than the other branches taught.

There has been built, with the assistance of the boys, an addition to the teacher's house, a large wood-shed, also a picket-fence inclosing the school premises.

We are clearing a piece of land designed for a school farm.

The assistant teacher has been employed in her department. The number of garments made during the quarter is as follows: 16 shirts, 8 coats, 12 pants, 5 skirts, 9 dresses, 6 sacques, and 9 aprons, besides some other small garments. The girls have been under the care of the assistant teacher, and have made some improvement in sewing, knitting, and housework. The health and conduct of the children have been good.

I have been employed a portion of the time in assisting in the several departments at the agency, as circumstances required.

Very respectfully,

GEO. W. BYRD,  
*Teacher.*

G. A. HENRY,  
*Sub-Indian Agent, Wyoming Territory.*

## No. 8.

PUYALLUP INDIAN RESERVATION, WASHINGTON TERRITORY  
*September 18, 1871.*

SIR: In conformity with the regulations of the Indian Department, and in compliance with your instructions, I have the honor herewith to transmit this my first annual report.

On assuming the duties of farmer in charge on this reserve the 10th of December last, I found the reservation in a dilapidated condition. The Indian farms were fenced with poles, not very well constructed, affording very little protection to the crops. The Indians had but few comfortable houses, many of them living in wigwams. The department buildings were as follows: one carpenter shop in very poor order; one blacksmith-shop in poor order; one school-house not in very good repair, and too small; two dwelling-houses for employés; there were two other houses formerly used by employés, but on taking charge I found them occupied by Indians, and in such a condition that it was necessary to have them torn down and reconstructed; one hay-shed, and a small

stable. The farming implements turned over to me were almost worthless, being worn out and broken. The carpenter and blacksmith tools were also in a poor condition.

The census taken by my predecessor, just before turning over to me, shows a total of four hundred and fifty persons belonging to this reservation; of that number at least two hundred and fifty were absent on my taking charge. This being the fishing season for the Indians, there are many of them temporarily absent procuring their winter supply of salmon; consequently I am unable to take the annual census correctly, but the number will not vary materially from last year. There are residing on the reservation at this time three hundred; absent from the reserve, fishing and working for the whites, about one hundred and fifty.

As winter was already upon us when I took charge, it was impossible to do much toward improving the reservation until spring. As soon as the weather would permit, I commenced repairing fences, employé houses, out-houses, &c. During the present year we have moved the dwelling occupied by myself over 600 yards, to a site safe from the winter's overflow; constructed a dwelling for teacher, moving the school-house convenient thereto, making repairs to all the other employé houses, inclosing the different dwellings with picket fences, clearing away the old rubbish, and otherwise making many needed repairs. Since entering upon my official duties I have exerted myself and tried to persuade the Indians to locate and remain permanently upon the reservation, to build houses, open farms, and cultivate the soil, in order to make it their future home; to give up their roving habits, and apply themselves entirely to raising their own subsistence, so that they would be provided with the necessities of life to meet their wants. I made every inducement to them to put in spring crops, in which I succeeded to a considerable extent. Many of them have labored under great disadvantages in putting in their crops, owing to a scarcity of teams. I will here state that there are but two yoke of cattle belonging to this reserve fit for use, and as many of the Indians have no teams of their own, it is impossible for them to cultivate much land. I would earnestly recommend that the Department furnish this reservation with twenty sets of harness for the use of such of the Indians as are desirous of farming and have no oxen or harness of their own. Nearly every Indian has horses, and if harness were furnished them, they would cultivate much more land. A majority of the Indians have been very industrious this year. The following is the number of acres cultivated by the Indians, and the estimated products: 49 acres wheat, estimated 882 bushels; 63 acres oats, estimated 1,890 bushels; 71 acres potatoes, estimated 10,650 bushels; 5 acres turnips, estimated 1,500 bushels; 4 acres peas, estimated 120 bushels; 9 acres barley, estimated, 270 bushels; 80 acres timothy meadow, estimated 160 tons; 10 acres garden vegetables; 291 acres, producing 15,312 bushels and 160 tons hay, besides cutting over 400 tons marsh hay, and gathering over 2,000 pounds timothy-seed, valued at 6 cents per pound. They have cut and sold 554,487 feet saw-logs, receiving for the same \$2,495 19; 480 piles, receiving \$720.

There will be a large catch of salmon this year, probably over 400 barrels. The number of stock belonging to the Indians on this reservation is 409 head of horses, 13 American brood mares, 15 yoke oxen, 21 milch cows, 47 head beef cattle, and 5 mules; besides, nearly every family has chickens, and many, in addition, have ducks and geese.

I think I can see a marked change for the better in the general appearance of the Indians at this reservation since taking charge; and I have no hesitation in saying that they are on the advance toward the

goal of civilization. Many of them have discarded every vestige of their former habits, and work on their farms with a zeal and industry that might be imitated to advantage by some of their white brethren. To these I have given every encouragement and afforded every facility requisite to secure success, that others might be induced to follow their example. I have exerted every influence to prevent the sale of intoxicating liquors, with, I am happy to report, very gratifying success. The practice has now almost entirely ceased, with the exception of a few, who are, I fear, incorrigible, and will continue the use of bad whisky as long as depraved white men can be found to sell it to them.

The health of the Indians on this reserve has been generally good. For further account of their sanitary condition I will refer you to the report of the resident physician, herewith inclosed. I would also refer you to the recommendations contained in his report. In the physician's opinion, as to the necessity of a hospital, I fully concur. The cost of building a hospital would be comparatively small. In view of this fact, and the great benefits the Indians would derive from this improvement, I would recommend an appropriation of \$400.

The school, though small, is making considerable progress. This school, with a good building and proper appliances, will, I am satisfied, be of great benefit to the Indians, and tend greatly toward their advancement in the arts of civilized life. I would therefore earnestly recommend an appropriation of \$800 for a school-house. I would also call your attention to the fact that there is no dwelling-house for the carpenter, and would recommend an appropriation of \$400 for another employé house.

I am, sir, very respectfully, your obedient servant,

BYRON BARLOW,

*Farmer in charge Puyallup Indian Reservation.*

General T. J. McKENNY,

*Superintendent of Indian Affairs, Washington Territory.*

## No. 9.

### PUYALLUP INDIAN RESERVATION,

*Washington Territory, August 31, 1871.*

SIR: In compliance with the regulations of the Indian Department, I have the honor to submit the following, my first annual report.

On the reception of my appointment as teacher to Indians on the Puyallup reservation, I proceeded there, arriving on the 7th day of March. I found the school had been suspended for several days. There being no house suitable for the teacher to reside in, I was necessarily compelled to move my family into the school-house.

The first duty assigned me was to assist the carpenter in erecting quarters for teacher, and move the school-house convenient thereto, and also building fence, hauling manure, planting garden for school, &c.

I organized my school on the 26th day of June, and up to the present time I kept it open, with the exception of one week vacation in the present month. I am happy to say that the scholars under my charge have thus far made commendable progress. The past quarter's experience has fully convinced me that many of the Indian children on this reservation are quite capable of acquiring education.

The only barrier to success, as compared with the average of white

children, is the difficulty of enunciating many of the sounds represented in the English alphabet. And being ignorant of the definitions of the words they learn and the sentences they read, the exercises do not possess an equal interest to them as to white children. I have drilled the children in this school in a way that is calculated to improve their pronunciation, and with very good success. During this, my first quarter, I have received into my school eleven scholars—ten boys and one girl—their ages varying from eight to sixteen years old.

The branches taught are spelling, reading, writing, arithmetic, and geography. All are studying orthography except two, who are still unable to pronounce. The scholars under my charge are rapidly learning neatness of personal appearance and to perform duties connected with the farm and household. And in order to secure these benefits to them, I would respectfully suggest that there be in a suitable locality five acres of the reservation land set apart for that special purpose, cleared and fenced, and would recommend that \$200 be appropriated to pay the expenses of the same, thereby enabling the school on this reservation to be a self-sustaining institution.

I would call your attention to the fact that the school-house is entirely unfit and inadequate to the requirements of the school. The walls of the house being made of old refuse undressed lumber, one inch in thickness, present many cracks and open places, and form but a very poor protection against wind and cold weather.

I would therefore recommend an appropriation of, say \$800, for the purpose of constructing a school-house adapted to a manual-labor institution.

I am, very respectfully, your obedient servant,

L. F. THOMPSON,  
*Teacher.*

General T. J. McKENNY,  
*Superintendent of Indian Affairs, Washington Territory.*

---

No. 10.

OFFICE OF SPECIAL INDIAN AGENT,  
*Fort Colville, Washington Territory, September 1, 1871.*

SIR: I have the honor to submit the following as my annual report of Indians under my supervision, they having never been treated with or placed on reservations, and reside within the following boundaries, viz: Commencing at a point where the forty-ninth parallel of latitude crosses the Cascade Mountains; thence along the main ridge of the Cascade Mountains to the point where the northern tributaries of Lake Chelan have their rise; thence southeasterly on the divide between the waters of Lake Chelan and Methow River to the Columbia River; thence crossing the Columbia River, on a true east course to a point whose longitude is  $119^{\circ} 10'$ ; thence in a true south course to the forty-seventh parallel of latitude; thence east on said parallel to the one hundred and seventeenth degree of longitude, (being the line of Idaho Territory;) thence north to the forty-ninth parallel of latitude; thence west along said parallel to place of beginning. The Indian tribes living within these boundaries are the Methows, Okanagans, San Poels, Colvilles, Lakes, Spokanes, Calispels, and part of the Cœur-d'Alénés. The accompanying map will show what part of this district is occupied by each tribe under my control.

The Methows, residing on the river of the same name, number three hundred and ten, have never received any assistance from the Government, and desire to be furnished with agricultural implements. Most of them cultivate small patches of potatoes and corn; about one-third of their subsistence is derived from this source; the remainder from hunting, fishing, and root-digging.

The Okanagans, numbering three hundred and forty, reside on the Okanagan River and its tributaries; they have only four farms, on which they raise wheat, corn, and potatoes; they have a few agricultural implements that they received from this agency, but need many more; they depend mostly on fish, roots, and berries for subsistence.

The San Poels and Nespelums number five hundred and thirty-eight, and reside on streams of the same name, and on the Columbia River; make but little effort toward farming, they having but few small inclosures, in which they plant corn and potatoes. They have never received any presents from the Government, though frequently offered them by the agents; they tell me that they never will receive anything from the Government; that the land on which they reside is their land; that their fathers gave it to them, and, by accepting presents, they would give the Government a claim to their lands; that the United States has no authority over them; that God is their chief ruler. They are rich in horses and cattle; satisfied with their condition, their only fear being that the white man will settle in their country, or the Government deprive them of it.

The Colvilles, numbering six hundred and thirty-one, and residing on the Columbia, Kettle, and Columbia Rivers, have thirty-five farms; they raise wheat, oats, corn, potatoes, peas, tomatoes, and garden vegetables. About one-half of their subsistence is derived from this source; some of the farmers are industrious, and raise as good crops as their white neighbors; they reside near the agency, and have received more assistance from the Government than any other tribe in this district. This assistance, together with the fact that there are mills in Colville Valley at which they have their wheat and corn ground for consumption, is a great help in encouraging them to farm; the only mills in this district are in this valley.

The Hudson's Bay Company post, established in 1820, and situated on the east bank of the Columbia River, opposite the mouth of Kettle River, and a mile above Kettle Falls, (the great fishery where the surrounding tribes get their annual supply of salmon,) was recently purchased by the United States, and, in the event that these Indians are placed on a reservation, would be one of the most suitable places in this district for the agency buildings, being near the falls where the Indians congregate, at the mouth of Colville and Kettle River Valleys, and at a point where the various trails meet. These buildings are now occupied by Angus McDonald, a chief trader of the Hudson's Bay Company, who informs me that they are situated on his homestead claim. That part of this valley having never been surveyed, I question whether he can acquire any title as a homestead settler. Furthermore, Angus McDonald is simply an agent of the Hudson's Bay Company, and the possessory rights of that company and title to these buildings was acquired by the United States in their purchase. I doubt whether his occupancy of these buildings will give him any title to them or to the land, and that he must be holding possession by sufferance of the Government.

The Catholic fathers established a mission in 1846 at Kettle Falls, called St. Paul's, for the conversion of the Indians; and in 1868 they established another, called St. Francis Regis, five miles east of the first.

They now occupy the former during salmon season, the latter being the chief mission for this tribe. The labor of the fathers is in the conversion of the Indians; they make no effort to teach them reading and writing.

The Lakes, numbering two hundred and thirty, reside on the Columbia, from Kettle Falls north; they have never made any attempt at farming until this year, and a very unusual high water in the Columbia overflowed and destroyed their crop. Losing their labor this year has not discouraged them from trying it again next year. This tribe subsist almost entirely by hunting and trapping; they catch the finest furs, and more of them than any other tribe in this district, which they sell to the traders, and purchase food and clothing.

The Spokanes, numbering seven hundred and twenty-five, reside on the Spokane River; they are divided into three bands, the upper, middle, and lower, with a chief to each band, and Garry as head chief; they have quite a number of farms, on which they raise wheat, corn, and potatoes. This year, for the first time, some of them have accepted presents, and been furnished with seed-wheat and potatoes, but a majority of them are opposed to accepting anything from the Government. About one-third of their subsistence is obtained by cultivating the soil, the remainder from fish, roots, and berries.

In 1836 a mission was established at Walker's Prairie, six miles north of the Spokane River, by Presbyterian missionaries, and a number of Spokanes were converted to Christianity. (The mission was burned in 1848.) A few years ago the Jesuit fathers established a mission on Spokane Prairie, forty miles above the first mission, and have a number of converts to their faith, so that the tribe is about equally divided on the religious question; and as an Indian cannot be conservative, and is from nature a fanatic, the feeling between the two factions is about as bitter as between Orangemen and Hibernians. Trouble was apprehended between these two factions last winter, but when the rumor of a withdrawal of the troops from Fort Colville reached them, they dropped the religious question, and united in council to ascertain what advantage could be gained by the abandonment of Fort Colville. On this question they were also divided. Ah-mā-mel-chin, a middle Spokane, was leader of the party friendly to the whites, and Garry, head chief, was for appropriating what improvements the whites had made on their lands to his benefit. When they ascertained that the troops would not be withdrawn, Ah-mā-mel-chin came to the agency, and stated that he was, and always had been, friendly to the whites, and that his band would show their good feeling by accepting presents against the wishes of a majority of his people. Garry came also, and had but little to say; would not accept anything, and on his way back to the Spokane, notified some settlers not to make any more improvements, for they would do them no good, as he intended to appropriate them to his benefit.

The Calispels reside near the Pen-d'oriell River and on Camas Prairie, numbering four hundred and twenty. They have thirteen small farms, and cultivate wheat and potatoes, about one-third of their subsistence being derived from this source. The surrounding tribes assemble on this prairie in June to dig camas, which they bake and dry for winter use.

The Calispels are the most peaceable and quiet of any tribe in this district, and are desirous of improving their condition. They want agricultural implements; they need them, and are deserving the assistance of the Government.

The Cœur-d'Alenes reside on Spokane Prairie, and their number

living in this Territory is about one hundred and fifty. They farm on a small scale, but subsist principally by hunting and fishing. They have not accepted any presents from this agency.

Kam-i-ac-kan, head chief of the Yakama Nation, with a small band of Indians, resides on Rock Creek, the northwestern tributary of the Palouse. He does not visit this agency, and refused last November, when I visited him, to receive any presents, saying he preferred to have the Government indebted to him than to be indebted to the Government. His band cultivate a small parcel of land, raising corn and potatoes.

Of the various tribes in this district, those who are Catholic, or prefer Catholic teachers, are as follows: Okanagans, Colvilles, Lakes, Calispels, Upper Spokanes, and Cœur-d'Alenes, numbering 2,137. Those preferring Protestant religion and teachers, are the Methows, San Poels, and Lower Spokanes, numbering 1,212.

To better enable you to see at a glance the country comprised in the several treaties with the Flathead, Nez Perce, Yakama, and Cayuse Indians, also to show you the tract not treated for, I have prepared a map showing these facts. The greater part of this tract not treated for is in this Territory, and all the Indians located on it reside in this Territory, except part of the Cœur-d'Alenes, who reside in Idaho. A greater part of this tract is fast settling up, it being near or on the line of the proposed Northern Pacific Railroad. It is no more than justice to the Indians and the settlers to have the Government indicate what it intends doing with these lands. To let the question remain unsettled until all the arable land is occupied by settlers, is not justice to the Indians, and to allow settlers to occupy the land and afterward to establish a reservation for Indians covering their claims, is not justice to the settler. Whatever appraised value they might receive for their improvements would fall far short of the real value dependent on a location near a railroad in a country where arable land is scarce. Men do not go on the frontiers, endure hardships, to be paid just the value of their labor; the *prospective* value of the places they may settle on is the inducement to leave civilization and all its enjoyments and settle in the wilds of an Indian country.

There is fear that the encroachments of settlers on lands that the Indians consider their own may cause a collision between them, and a general war ensue. To guard against an occurrence of this kind, I would suggest that there be reservations established, and the Indians placed on them, and that it be done soon, for the nature of the case demands immediate action.

I would also state, judging by the actions of the Indians last spring, on the rumor of a withdrawal of troops from Fort Colville, that it is my belief that the lives and property of the settlers in this vicinity would not be safe without military protection; a majority of the Spokanes, San Poels, Okanagans, and Colvilles were anxious to appropriate the property of the settlers to their use and benefit; they made no effort to conceal their intentions. Knowing their numbers and feeling their strength, they notified many settlers what they intended to do.

In view of these facts, I believe that the continued occupancy of Fort Colville by the military is our only security against an Indian war, until these various tribes are placed on reservations.

I have the honor to be, very respectfully, your obedient servant,

WM. P. WINANS,

*Farmer in charge, &c.*

General T. J. McKENNY,

*Superintendent of Indian Affairs,*

*Olympia, Washington Territory.*

## No. 11.

CHEHALIS INDIAN RESERVATION,  
*Washington Territory, September 19, 1871.*

SIR: I have the honor to report that I arrived here on the 1st of February last, as farmer in charge of this reservation, and found the Indians to be in a very destitute condition. They had but little to eat for themselves, and comparatively not anything for their horses. The year previous, the farmer then in charge hired their land and them to work it; most of the product was hauled to Olympia, not leaving a bushel of the same for seed. These Indians are fast adopting the manners and habits of the whites. Some have built "Boston" houses, and more are desirous of building, but are not able to get the lumber and other material for the purpose. They have done nothing this summer in the way of clearing land. One reason therefor is that they had nothing to support themselves with while at work, and they were obliged to go off the reservation to find work. Another reason is that as soon as they were done with their planting, they all went to Shoalwater Bay, to a "cultus pot-latch," and did not return for three weeks; some of them not until the middle of summer. Those that returned soonest went to work for the white settlers, slashing and clearing land for them, so that most of their time has been spent off the reservation. Some of the Indians have had cleared land given them to cultivate, I believe twelve in all; they have from two to six acres each, which they call their own, and farm to suit themselves. Always plowing in the spring, when the ground is wet, it is impossible for a full crop to be produced. Their reservation being badly fenced, it has been impracticable to keep the cattle from breaking in and destroying most of the Indian gardens. I suppose you are aware that most of the farming lands are overflowed by water every winter, by which the fencing is carried away. I have been urging upon the Indians the necessity of fencing the highest ground with rails, and of driving pickets in the low places, but they say very high water will carry all away. The Government has had eight or ten acres of land slashed but not cleared, but it has grown up to bushes, and is in a worse condition than before. We have cleared three acres of land and planted therein potatoes and turnips. The corn is an entire failure, having been destroyed by frost, and the potato crop is very light, on account of drought and frost.

Since John Haden's talk with Mr. Brunot, of the board of Indian commissioners, the Indians seem to be very much encouraged. Mr. Brunot assured him that this was their land, and that it would not be taken away from them without their consent. I had informed them of the same, also, many times, but they were not satisfied.

Very respectfully, your obedient servant,

JACOB SMITH,

*Farmer in charge of Chehalis Indian Reservation.*

T. J. McKENNY,  
*Superintendent of Indian Affairs.*

## OREGON SUPERINTENDENCY.

No. 12.

OFFICE SUPERINTENDENT INDIAN AFFAIRS,  
*Salem, Oregon, October 25, 1871.*

SIR: I have the honor to submit my third annual report of the condition of Indian affairs in Oregon.

It will be observed that the agents on every reservation have been changed within the year. These changes have produced confusion, and consequently we have some excuse for not accomplishing all we designed. I believe that every man now in charge of Indians in Oregon has his heart in the work.

## UMATILLA RESERVATION.

(N. A. Cornoyer, agent.)

The condition of Indian affairs in this agency has been somewhat unstable for several years, owing to the great pressure of *outside* parties to obtain possession of the lands of this reservation.

In compliance with instructions from Commissioner Parker, a council was called to meet August 7, at Umatilla agency, to ascertain on what terms the Indians would consent "to remove to some other reservation," &c., N. A. Cornoyer, United States Indian agent, Umatilla, and Hon. John S. White, together with myself, constituting commissioners on the part of the United States; all the chiefs and headmen of the three several tribes belonging to the reservation, on the part of the Indians; Hon. Felix R. Brunot, chairman of congressional executive committee, and Thomas K. Kree, his secretary, honored the council. A fair and plain statement of the several propositions was made and duly considered, and, after six days' council, the Indians unanimously rejected any and all propositions "to sell and remove, or to take land in severalty." This virtually settled the question as to the permanency of these people. It now becomes the duty of the Indian Department to make such arrangement and improvement for them as will prepare them for citizenship.

But few years will elapse until all treaty provisions expire. They are comparatively wealthy, but, when unprotected by an United States agent, would fall an easy prey to the sharpers who hang round Indian reservations.

The agency buildings are worthless, and should be rebuilt. The flour-mill is eligibly located and efficient. The saw-mill should be removed to the immediate vicinity of the timber.

This agency has been assigned to the Catholic church, under whose supervision a school is being kept, though not a very efficient one. I think that the church is preparing to enlarge its facilities for taking care of and teaching the Indian children. This will probably meet the want so far as the children of Catholic parents are concerned; but at least one-half the Indians on the reservation are very much opposed to the Catholic religion, and will not consent to have their children educated in that church. Some liberty of conscience on this subject should be secured to the "non-Catholics." In obedience to the genius of our Government, no people can be forced to *accept* or to reject any form of religion.

I have confidence in the integrity and ability of Agent Cornoyer, and

trust that his administration may be successful, but he should be instructed to establish a school acceptable to the non-Catholic Indians.

Some time must elapse before these people will consent to locate permanently on lands in severalty.

#### WARM SPRINGS RESERVATION.

(John Smith, agent.)

Unlike Umatilla, these people occupy a tract of country that nobody wants. Indeed it has but few resources to make it available as a home for Indians. The few small bodies of arable land, which are second-rate, however, have been surveyed preparatory to allotment.

The agent has found some new country on the reservation which he thinks will be available for settlement. This step is very encouraging to the Indians, who seem to start anew on the road to civilized life.

The present season has been unusually dry, and but little has been provided on the reservation to subsist them. Agent Smith reports that a fair supply of Indian provisions, consisting of roots, berries, and fish, has been secured, which, together with such assistance as he can give, will enable the people to get through the coming winter. In this connection I desire to call attention to the necessity of having a small portion of the Dalles fishery on the Columbia River reserved forever for the especial use of the Indians of Warm Springs reservation. By treaty of 1855 with General Palmer, acting superintendent, this right was reserved by the Indians, but in a supplemental treaty with Superintendent Huntington, in 1865, the right was relinquished for a small consideration, which has been paid. The Indians claim that they did not understand that they were selling the right to take fish at the Dalles, in the latter treaty, and claim the right as before. The whites deny the use of the land to the Indians for fishing. Now this land still belongs to the United States, and inasmuch as the fishery is an indispensable necessity for the Indians at Warm Springs, I would most respectfully suggest and insist on a reservation being made of, say, one mile on the south side of the Columbia River. Captain Smith is a zealous member of the Presbyterian Church, but holds his position under the Methodist, to which this agency has been assigned. Some specific and well-understood rules are necessary to be made for the government of church matters in Indian agencies. This precaution should be heeded, although Captain Smith is, so far as my knowledge extends, acceptable to both Methodists and Indians, "still he is a *man*, and man is mortal." The efforts of Agent Smith to civilize and Christianize this people have been in part successful, especially with the Wascoes. He has organized a Sabbath-school, the results of which are good, and promise much for the future. A large number of the other tribes of the confederation, however, are opposed to the Christian religion, and have steadily refused to accept either religion or schools at the hands of the agent. They are still in "paint and feathers, following the way of their fathers," and will require peculiar treatment, largely mixed with Christian charity and human kindness, to overcome their long-taught prejudices against the white man's religion and customs. The schools are partly successful, and promise but small and comparatively insignificant good for the funds expended. Agent Smith is now preparing to organize among them a manual-labor school, the only kind, in fact, that have success in them, but the funds at his command are insufficient to establish such a school on a permanent basis.

The agency buildings are good ; flour-mill efficient ; saw-mill nearly worn out, and should be rebuilt near the timber.

#### KLAMATH SUB-AGENCY.

(J. N. High, sub-agent.)

This agency has changed the management twice within the year, Captain O. C. Knapp having been relieved by John Meacham, as special commissary, October 1, 1870, and he in turn by the present incumbent September 1, 1871. Notwithstanding the confusion arising from so many changes, the people are steadily progressing, and bid fair, though the youngest in civilization, to rival their red brethren of other and older reservations.

With the present understanding this agency is under assignment to the Methodist Church. These Indians, having never been under any kind of religious instruction, find no fault with the arrangement ; although they are slow to embrace the Christian religion, nevertheless, of all the missionary field, this one is the most desirable and hopeful from the fact above stated.

They are a very peculiar people, exhibiting more enterprise than commonly found among natives. The completion of a saw-mill has worked a great reformation and inspired them to extraordinary exertion to amass property of various kinds. Savages in skins, paint, and feathers, as they were two short years since, they have donned the white man's costume, taken the ax, cross-cut saw, and hauled to the mill a half million feet of lumber, and to-day are lumber merchants with stock in trade constantly on hand, evincing shrewdness and business integrity that makes an agent's heart strong to work with and for them.

The flouring-mill is fast approaching completion, and will do much for their advancement, besides being a profitable source of subsistence. Their native food has hitherto been "nocas" and fish, of which they have unlimited sources.

No schools have yet been established, except a sickly effort several years ago, which resulted in so little good that it was abandoned until such time as buildings could be erected suitable for a manual-labor school, which, with the abundance of lumber now available, may be established at an early day, but can only be made successful by an increased appropriation for school purposes, or by diverting annuity funds to that end.

The exterior boundaries have been run and a sufficient amount of arable land surveyed to allot each person a home. This idea of permanent home, on a small piece of land, with exclusive privileges, is so new to them that they are slow to comprehend, although not unwilling to accept. The altitude of this country being over 4,000 feet, consequently the climate is cold and uncertain. The cultivated products being confined to some hardy varieties of cereals and vegetable, all of which are liable to destruction by the heavy frosts, it is safe to say that Klamath is unreliable as an agricultural country, though, strangely enough, it is a good grazing country.

#### YAINAX STATION.

(J. D. Applegate, special commissary, in charge.)

Located within the boundary of Klamath reservation, on Sprague's River, this settlement was made, in the latter part of 1869, for the pur-

pose of colonizing the Snake Indians with the Wall-pah-pes. Success has attended the labors of Commissary Applegate to a satisfactory extent. He has, with a few white men as employes assisting the Indians, made good and substantial improvements, consisting of a farm of 300 acres, well fenced and cultivated in part, with agency buildings, including houses for employes, barn, and corrals, together with eighteen good substantial log-houses for Indian families, with windows and doors to each. The lumber for this station is obtained from Klamath Mills, without other expense than that of hauling a distance of forty miles. This station was originally a part of the Klamath agency, but owing to the fact that these Indians have long been at war with those at Klamath, consequently are ancient enemies, and still entertaining somewhat the feelings incident to such relationship, which sentiment still lingers also with the Klamaths, it seems impracticable, and in fact impossible, that an agent located at Klamath agency proper could prevent the stronger from constantly encroaching on the rights of the weaker. And since the only way to secure peace and justice is that those in charge at either agency should have equal power to punish crime and protect the weaker, and since the appropriations for each were made separate, and in no way connecting, and these reasons being set forth by the then acting agent, O. C. Knapp, and concurred in by Commissary Applegate, also approved by the chiefs and headmen of the Klamaths, and demanded by the chief headmen of the Snakes and Wall-pah-pe tribes; believing also that the success of the Snake settlement at Yainax depended on effective measures being taken; therefore, on consent, and with a distinct understanding with all parties interested, a line was drawn north and south across Klamath reservation, at or near Mahogany Mountain, the eastern part assigned to the Snakes, and the western to the Klamaths. The success of the movement demonstrates the wisdom thereof, and I would respectfully urge the Department to make and create Yainax a distinct agency; and further, that the present commissary, J. D. Applegate, should be appointed agent permanently. On no account should he, with his long and successful experience among Indians, be placed subject to the whims and caprices of any inexperienced sub-agent, as he was under former connections with Klamath. No kind of religion or church government has been introduced among these people except as the great virtues and principles of Christianity have been exemplified in the management of them by the acting commissary, Applegate, and his subordinates, with "Sunday talks," and easy lessons, and mild sermons, mixed with common and every-day affairs of life, which is, after all, a very successful way to inculcate correct and satisfactory principles of Christianity. Applegate possesses, in a satisfactory quantity, the necessary qualities of both head and heart, combined with industrious habits, uniting energy and hopeful, cheerful manner, to inspire, as he has, his people with confidence in him and his promises. To his adaptability to the work may be ascribed his success. Both Applegate and Indians are glamorous for schools. The present amount of funds appropriated for Snake Indians is insufficient for the establishment on a safe footing of a school with prospects of success. I have instructed him to erect, at the earliest reasonable time, a building suitable for church, school, and general meeting-house. No allotment of lands in severalty has been provided for the people at this station: first, because the Oregon Central and Military Wagon-Road Company have located the alternate sections of lands surrounding this settlement. In this connection, allow me to call the attention of the Department to this subject. In few words, "the

situation" is that the lines of the reservation were agreed on in council with Indians, by Superintendent Huntington, before the organization of the said road company; that the road was located before the treaty was ratified, and the case stands subject to a decision as to priority of right. This condition of affairs was not understood by me at the time of making the settlement for Snake Indians, and it would do much damage to the efficiency of the Department to be compelled to abandon the location at a sacrifice of the improvements already made, and still more the discouragement of the Indians, if compelled to remove, as they "come in" with the distinct understanding (which I felt justified in making) with them that this was to be their permanent home. Pardon me for urging on the Department at Washington especial attention to this subject, as the success of Yainax depends on said action.

#### ALSEA SUB-AGENCY,

(Samuel Case, special commissary, in charge,)

is situated on the Pacific coast, and constitutes the southern portion of the "coast reservation." It is occupied by four fragmentary tribes of Indians, none of whom are under treaty. Their wants are few in comparison with those other reservations, from the fact that they mostly occupy their old homes, and still retain somewhat their former modes of living. It need not, however, be supposed that they are lagging behind in civilization. Notwithstanding they are too few in number to justify the establishment hitherto of shops and schools among them, they have nevertheless shaken off many of their old ways, and adopted the habits of their white neighbors.

The present acting commissary (Case) seems to be thoroughly imbued with the most essential qualities for an Indian agent, and from his long acquaintance with these particular people, together with an enterprising pride to bring them up on a level with those of other agencies, he is doing good and substantial work, and should be permanently appointed to look over and lead them up the "grade." No arrangements have been made to allot land in severalty on this agency, for the reason that it was thought advisable to colonize these people with those of Siletz, in the event that sufficient land could be found in the latter reservation suitable for Indian houses. The report, however, of Department surveyor precludes the possibility of such arrangement, unless funds were furnished to clear up timber-lands for their use.

I have looked this subject carefully over, and now conclude that the only just plan will be to survey and allot lands to the Alsea people on Alsea agency, and will proceed to carry out said plan unless otherwise ordered.

These people should have a cheap saw-mill, church, and school-house erected, and an appropriation to carry them on; and not until then will they be on equal footing with others of their race. Unless steps are taken to secure them in these necessary adjuncts to civilization they must eventually fall behind.

The Department buildings are fast decaying, and in a short time will become untenable. Indeed they are only temporary shanties at best.

#### SILETZ AGENCY.

(General Joel Palmer, agent.)

This agency is so fully reported that it would seem almost unnecessary to amplify.

I do not, however, fully concur in all that Agent Palmer has said and intimated, in this, that the culture of the Indians had been entirely neglected. While it is not my business to defend all the acts of agents, it is mine to see that justice is done those who have served the Indian Department under my administration especially.

The Siletz Indians have always been regarded as the most belligerent and refractory of any in this State; notwithstanding which, however, they are far removed from savage life, having acquired considerable knowledge of the common arts of civilization, and, to all appearance, compare favorably with those of other reservations in intelligence and business capacity. Somewhere, somehow, and by some means or other, they have come to the "front," and it is but justice to former agents to acknowledge that fact. No man is devoid of good qualities. Neither should it (though much has been done for these people) be expected, under the old *regime*, to find a nation of people who were steeped in degradation to be brought into all the wonderful and marvelous light of Christianity in the short space of time that they have been under the care of United States agents.

It is Christian-like to forget wrong and accredit good. Deplorably true, it may be, that Siletz Indians are minus chastity, but the white people, who claim to be civilized, have probably contributed largely to the loss of that particular virtue. Under the management of Agent Palmer, with his long and successful experience as superintendent of Indian affairs in former years, together with eminent Christian virtues and heart fully alive to his work, the much-needed reformation has begun. Every facility and encouragement will be afforded him by me in this worthy labor.

This agency has also been assigned to the Methodist Church, whose well-established reputation successful for missionary labors gives a guarantee that the Siletz Indians will have opportunity and encouragement to throw off some of the bad habits acquired by contact with vicious white men. The schools at Siletz have thus far been only partially successful. The cause of failure is the same assigned by all teachers of Indians, *i. e.*, the constant intercourse of children with their parents. Agent Palmer is sanguine that he can arrange "day-schools," with white female teachers, at a reasonable expense to meet the wants of these people. With the failure of the past fresh in memory, I confess I have not much faith in the plan. Nevertheless, believing that almost any reasonable thing is possible with a *brave* and *true* man, I consent.

The allotment of lands being prepared in severalty for the Siletz Indians is doing much to elevate and encourage them. Some confusion will doubtless arise in dividing these lands, but nothing serious is apprehended.

The agency is much in need of mills; in fact, they are almost indispensable, both for the purpose of Indian and department use.

A large house for general meetings should be built. The school-house, agents', and employes' houses all require repair. For the expense of which see "estimates."

#### GRAND RONDE RESERVATION.

(S. D. Reinhart, special commissary, in charge.)

Late Agent Lafollett was relieved, at his own request, August 22 last, the reasons given in his letter of resignation being "the interference of members of the Methodist Church." This agency having been as-

signed to that church, some unnecessary feeling has grown out of the assignment, owing to the establishment several years ago of a Catholic mission in the agency. It was understood between Secretary Delano, Dr. Harris, of the Methodist Church, and myself, and perhaps others, that this mission was to remain undisturbed; and, to satisfy the demand of Father Mesplie, of the Catholic Church, Chas. Lafollett, the acting agent, was recommended by Dr. Harris. Not being notified by the proper authorities of his responsibility to the Methodist Church, and supposing that he was allowed to remain as a "Catholic agent," Mr. Lafollett was unwilling to be questioned as to his official acts by members of the Methodist Church; hence his resignation. The present incumbent has the necessary business qualifications and good moral character, and is an efficient agent. Nevertheless, this question of agent should be settled at an early day.

The school has been discontinued until a manual-labor institution can be organized, which, with the abundant supply of lumber now available, may be accomplished at an early day, provided a reasonable appropriation be made for the erection of suitable building and support of teacher.

The agency buildings are now being repaired and will require no further appropriation for that purpose. The mills were old and useless for want of motive power, the dam having been washed away repeatedly, and as often rebuilt at enormous expense.

After careful examination and due deliberation upon the clamor of Indians for mills, and the indispensable necessity of the same, a general council of Indians, agent, and superintendent was called. The absence of funds applicable to such purpose being stated and apprehended by all parties interested, the proposition was made and fully explained to build a saw-mill on an eligible site near an abundant supply of timber, with this understanding, that all machinery and mechanical labor was to be paid for out of annuity and repair funds, the Indians to perform all such labor on the mill and contingencies as they were capable of, and the Department to furnish subsistence. This plan of operations was submitted to the Commissioner of Indian Affairs for his approval, which, for some reason, has been withheld, though not countermanded. The mill is completed, and is now making lumber, and has been built at a cost of about \$4,500. The Indians faithfully performed their part of the agreement, cutting a race of sufficient capacity a distance of 600 yards. They are now very anxious for a flouring-mill, as evidenced during the council with Hon. F. R. Brunot during his late visit, and are willing that the necessary funds may be diverted from their annuity. Under this pressure I have ordered such parts of the old flouring-mill as are available, together with such other new machinery as may be necessary, to be transferred to a building attached to the new saw-mill, and put in running order without delay. In this way much expense will be saved by the use of the machinery of the saw-mill. The long-prayed-for allotment of lands to Indians in severalty will be made as soon as the surveys are approved by the Department at Washington, to which matter I beg to call your especial attention and speedy action. These people fully appreciate the good work of the Government in their behalf, and will not prove ungrateful or unfaithful when allowed to assume the privileges and responsibilities of citizenship. The people of this agency are a living demonstration of the possibility of civilizing Indians, and give back denial to the thoughtless and oft-repeated declaration of "Indian haters," that "good Indians are all under ground."

## INDIANS NOT ON RESERVATIONS.

There are several bands of Indians scattered over Oregon that do not belong to any agency. Some of these bands have never been treated with, and are the real owners of the soil they occupy, or have been driven from. The Tilamooks and Clatsops formerly occupied that portion of the Pacific coast between the mouth of the Columbia River and the northern boundary of the "coast reservation." Their number is not definitely known to this office, but their wrongs have been heard and must be redressed. White men have actually crowded them on to the beach of the ocean, not leaving them country enough for graining purposes for the few horses they possess. There is also a small band on the Salmon River, and another on the Nestucca. These, however, are within the limits of the "coast reservation," and free from molestation, but are still living in old Indian style. It is, in this case, only a question of political humanity whether to attempt civilization or allow them to remain as now. They would consent to take land in severalty and receive in full pay for their claim to the country such amounts of money as will place them on a footing with reservation Indians.

Reference to the records of this office discloses the fact that Superintendent Dart made treaties in August, 1851, with these bands, together with other bands now broken up, or who have accepted benefits and protection from the Government by going into agencies, thereby relinquishing all claim to the country they formerly occupied, but that said treaties were never ratified.

It further appears that in 1855 Superintendent Joel Palmer met the representatives of all the various tribes occupying that portion of country west of the summit of the Coast range of mountains from the Columbia River to the southern boundary of Oregon in treaty council, and that a treaty was consummated with the said Indians, though never ratified by the Government.

There is no evidence to show that any of the said Indians above referred to, to wit, Clatsop, Tilamook, Salmon River, and Nestuccas, have ever received any benefits or annuities beyond a few presents at long intervals; hence it is clear that they have never ceded to the Government their country, and, since the country was not acquired by legitimate conquest, it is also clear that these people have rights that ought and will some day be secured to them.

Another band is now being oppressed and driven by white men from place to place in a small tract of country about thirty miles wide by forty miles long, covering the head-waters of the Umpqua River, in Southern Oregon. I have carefully examined the records, and sought all other information possible, and find that these Indians were never represented in any treaty council, and that the country above indicated has never been ceded by any band or tribe of Indians, nor acquired by legitimate conquest. Neither have these Indians ever acknowledged the authority of the United States, or received any consideration for their country.

If our Government intends to be just and uniform in its treatment of Indians, these people should be provided for without delay. Although they may not be the possessors of enough political power to secure to them the consideration of local politicians, they, at least, as original inheritors of the soil, have a "God-given 'right' to life, liberty, and the pursuit of happiness;" and no race, however strong, under a Government claiming to be established on principles of "equal and exact justice," should be permitted to trample on and exterminate a race whose

misfortune it is to be "untutored and untaught," though possessing the mental power and innate manhood, if once developed, superior to other races that now enjoy the great and priceless boon of freedom and protection from oppressors of every kind.

As an officer of the United States Indian Department, I demand, in behalf of the Indians of Oregon, that their rights be regarded, and justice done them in some way, either by paying them for their lands, or allowing them to locate homes in common with the white men who are making the Indian country so valuable. This subject is one that concerns the welfare of thousands of white people settled on the lands still claimed by these Indians. The importance of prompt action is manifest, when it is known that some of them have already taken council of able lawyers, who give them encouragement to prosecute their claims. The Indians must be provided for, and the peace of the country secured as well.

There are several bands of Indians living on the Columbia River, all of whom have been parties to treaties, but have refused to comply with treaty stipulations, and who, under the ruling of Commissioner Parker, last June, have thereby forfeited all right and interest in and to lands and annuities as per treaty, and, having been represented in treaty council, have no claim to the country they occupy. If this be so, I ask what is to be done with them? They should not be allowed to remain where now located. This subject demands consideration, as also what disposition is to be made of such Indians as refuse to return to their agencies.

I have before called the attention of your office to this subject, but have received no instructions. Snake or Shoshone Indians are living in the vicinity of Camp Harney. They were subjugated three years ago, since which time they have been under charge of the military department. An effort was made to remove them to Yainax in 1869, but no authority being invested in the superintendent of Indian affairs to compel them, they persistently refused, and hence the failure.

A large tract of country has been withdrawn from sale and settlement for eighteen months, from March 16, 1871, within the boundaries of which I was instructed to locate for them a reservation. No funds having been appropriated to defray the expenses, I am obliged to await such time as funds shall be on hand applicable for such purpose. The welfare of these Indians, and the public necessities, suggest action on this subject.

#### THE MODOCS

belong by treaty to Klamath agency, and have been located thereon, but, owing to the overbearing disposition of the Klamath Indians, they refuse to remain. Unavailing efforts have been made to induce them to return, but they persist in occupying their original homes, and, in fact, set up claim thereto. During the past summer they have been a source of annoyance and alarm to the white settlers, and at one time hostilities appeared imminent.

The military commander at Fort Klamath made an unsuccessful effort to arrest a few of the headmen. Two commissioners were sent from the Indian Department, and a temporary arrangement made whereby hostilities were averted. They cannot be made to live on Klamath reservation on account of the ancient feuds with the Klamaths. They are willing to locate permanently on a small reservation of six miles square, lying on both sides of the Oregon and California, near the head of the Tule Lake. In equity they are entitled to a portion of the Kla-

math and Modoc annuity, and need not necessarily be a burden to the Government. According to ruling of Commissioner, they have forfeited these rights. I would recommend that they be allowed a small reservation at the place indicated above, and also a *pro rata* division of the Klamath and Modoc treaty-funds for employés and annuities. Otherwise they will doubtless be a source of constant expense to the Government, and great annoyance to the white settlements near them. This proposition will be strenuously opposed by persons who are endeavoring to obtain a large land interest in that portion of the State. Though they may be somewhat responsible for not complying with the treaty, yet, to those familiar with Indian superstition, it is not strange or unreasonable that great charity should be extended to these people.

Actual experience demonstrates the impracticability of "consolidating" tribes of Indians, although in theory it looks well; and, if we seek to gratify the wishes of heartless white men, it can be made a complete success, as the weaker tribes are exterminated by the stronger, despite all efforts of agents to protect them. No people are more ambitious for power, nor exercise it with more tyranny, than do Indians. Under the present humane policy of the Government, the civilization of Indians is possible. To accomplish it, however, requires some definite, well defined, and well guarded permanent regulation, based not on theory, but on actual experience, and executed by men selected on account of their fitness for the work—men who are thoroughly Christianized, and have business qualification, united with enlarged views of duty; brave, strong, and true to the instinct of humanity, fully comprehending the whole economy of our Government; fired with ambition to do good by elevating a fast-decaying race to the plane of citizenship, and supported with the assurance that their term of office entirely depends on faithfully achieved success, not on the lapse of four years or the change of presidential administration. A new day begins with the Indian when such men are placed over them, and funds are furnished them to establish manual-labor schools, where more than books is taught; where the American language is laid on Indian tongues; where religion is made a motive-power in every human action, thus surely and permanently engrafting into Indian hearts and lives the great principles that govern men in the highest and best civilization of the age. In this way will be found the only approach to successfully combat and supplant their old superstitious ideas and practices of savage religion, medicine, marriage, merchandise of women, and the various inborn prejudices against our laws, usages, and customs. Then, too, another great hindering cause is the existence of the chieftainship and hereditary honors. Within two years a manifest advancement has been made. These Indians have been recognized as people, consulted as to the expenditure of funds, and in no instance have they disappointed the hopes of those in charge of them by unreasonable suggestions. On some agencies they have abandoned the Indian mode of making chiefs on account of hereditary right, and have taken pattern from white men by electing officers and making success depend on manhood. Also, the "old laws" for the adjustment of difficulties have been ignored and trial by jury instituted. Slavery has received an eternal quietus among them. Polygamy has been checked, and the sale of women prohibited, and within one year a new and encouraging interest is manifest in church and schools, especially in the latter, on account of the introduction of a new and original series of "object-charts," gotten up expressly for the Indians of Oregon by myself within the last year. This experiment was proposed to Commissioner Parker and had his sanction. The charts were ordered from

the house of Carlton & Lanahan, New York City, early in April last. The charts, being unlike any heretofore published, required new plates and engravings, thus augmenting cost and causing delay. The original design of having ten charts lithographed in colors was abandoned in part, and, on account of great expense, they were reluctantly cut down to eight in number, with but *one* in colors, to bring them within the resources of the superintendency. The total number furnished, 800 copies, (100 of each,) cost, delivered at this office, \$553. These charts have been submitted to the criticism of every Indian teacher in the service in Oregon, and have received commendation, often expressed in the declaration that "they are worth more for teaching Indians than all the primers and books ever invented." Professors and teachers in schools have importuned for copies of sets for use of white children. They being the property of Oregon Indians, the request has been denied, except for one set, donated to the deaf-mute school of Salem. One copy of each chart has been furnished your office; also, one to each superintendent of Indian affairs of Montana, California, Washington Territory, and Nebraska. Faith in the experiment and a desire to benefit the Indian race have induced me to send these samples to other superintendents, without intending to do an act of injustice to our own friends. And if they should meet the approval elsewhere that they have with my people, we are not losers by having contributed somewhat to advancement in this indispensable auxiliary to civilization.

Theory alone is not sufficient to insure success, and the almost universal report of failures in common Indian schools has been the result of attempting to introduce knowledge into the Indian mind by the same modes that white children are taught. It is a well-known fact to those who have been personally acquainted with Indian character that they are apt at illustration, always able to give or receive information by signs, however rude. Something tangible to the senses seems necessary, and in fact indispensable, whereby to instruct these people. The charts are so simple and plain that the mind comprehends the meaning whenever the eye rests on the object. An old Indian declared a few days since that he had given up all idea of learning to read, but now "these new papers (meaning the charts) have come, I can steal some of the white man's sense, and know what he does." I believe the investment a good one, the experiment successful, and that a new start will be taken by all our Indian children and adults, and that another and more advanced series of object-charts will soon be required.

The allotment of land in severalty, now being prepared, is perhaps the greatest boon they have yet received, and has already done more to raise the drooping heads of these down-trodden people than anything that has hitherto been done for them by the Government of the United States. They start anew, and, with proper management, the tribal relation will soon disappear, and many of them come up to the level, politically, with their white neighbors. I would respectfully suggest, in this connection, that if any impediments now exist under the Constitution and law to their becoming citizens, that congressional action be had without delay to remove such barriers. Also that the laws regulating intercourse be codified and amended so that they can be understood and applied practically to the administration of justice between white men and Indians belonging to reservations, and who are not qualified to become citizens, especially the liquor laws.

The late visit of Hon. F. R. Brunot has been very beneficial and stimulating to the Indians, and especially on the three several agencies which he honored by visiting personally. His words of encouragement

to these people have been remembered and treasured, and we hope for another visitation of like character.

Believing in the innate pride and ambition of the Indians to become white men in heart, and knowing full well that these people are close observers and apt imitators, a convention was called to meet at this office October 9, to be composed of acting agents and three Indian delegates from each agency.

Umatilla responded in person of Agent Cornoyer; Indians, Howlist-wan-pe, Winap-snoot, and Pierce.

Warm Springs: Captain Smith, agent; Indians, Mark, (head-chief,) Billy Chinook, and Pia-noose.

Siletz: Agent Palmer; Indians, Too-toot ney, Jack, Push-wash, and George Harney.

Grande Ronde: S. D. Reinhard, commissary in charge; Indians, Louis Lipsank, Joseph Hutchings, and Solomon Riggs.

Alsea sub-agency: Commissary Case, in charge; Indians, Jo Scott, Tyee Jim, Tyee John.

Klamath and Yainax were too distant to respond. Full proceedings will be forwarded at an early day.

That great good was accomplished no one doubts who took part in the convention. The Indians were much encouraged by what they saw at the State fair, then in active operation, also with the speeches made to them by distinguished gentlemen, among them Hon. George H. Williams, ex-United States Senator. Nearly every minister in the city, besides visitors from other parts of the State, addressed them. Perhaps the most appreciated lecture was delivered by Mrs. B. H. Bowman, a teacher in this city, in which many practical ideas were advanced, bearing directly on Indian civilization.

The Indians have heretofore been adjudged by the worthless vagabonds that escape from agencies, and, by lewdness and dissipation, incur the displeasure of the better portion of society. But these Indian delegates have won the good will, respect, and confidence of our white citizens, and demonstrated the transforming power of civilization over savages by their manly bearing, good behavior, personal appearance, and strong, logical speeches, which some of them delivered in a strange combination of Indian and American language, and with Indian oratory, often winning from the audience enthusiastic applause; the agents and Indians getting more interested as the convention proceeded for seven days, each session "better than the last." The churches, schools, colleges, and other public institutions were open to our delegates, and every facility offered by the citizens to make these people realize that the time had come when neither color nor race were barriers to the respect and consideration of mankind.

No event in connection with the Indian affairs of this State has ever produced so much enthusiasm, so much interest among white people, so much ambition among Indians, as has this convention, which finally culminated in a grand public meeting in the largest church in the city, densely crowded, continued until a late hour, and was finally adjourned against the protest of the citizens who had taken so much interest in our people. During the convention agents' meetings with the superintendents were held, and after comparing notes and exchanging views on the various subjects pertaining to Indian affairs, among other propositions agreed upon to be recommended was, after the present officers' time should expire, that the welfare of the Indians suggested that it would be good policy to select superintendents and agents for their fitness for the work, they to hold office during life, (subject, of course, to

impeachment,) and that an allowance of \$2,000 per annum and subsistence be made for agents, and \$4,000 for superintendent; that physicians serving the Department should be allowed at least \$1,200 per annum and subsistence; that every agency should have a commissary clerk, at \$1,000 per annum and subsistence; that agents should have the same control and power over visiting and truant Indians upon their agencies that they have over their own Indians; that tribal relations should be broken up, and the people admitted to citizenship as fast as they were qualified. Believing that our Government intends well by these people, and will do justice to them by furnishing the necessary funds to advance their interests, I would respectfully submit the accompanying statistical table, marked A, together with estimate required to carry out the policy lately inaugurated, of feeding and educating instead of killing, of building up instead of trampling down, of encouraging instead of enslaving these people.

These estimates are not exorbitant, and nothing less will fully meet the demand. With full appreciation of the prompt support of superiors in office, and words of commendation for subordinates, and a hope for another year of progress and prosperity in the affairs of this superintendency, I am, most respectfully, your obedient servant,

A. B. MEACHAM,

*Superintendent of Indian Affairs in Oregon.*

Hon. COMMISSIONER OF INDIAN AFFAIRS,

*Washington, D. C.*

### No. 13.

#### WARM SPRINGS AGENCY,

*September 1, 1871.*

SIR: I have the honor to submit the following report of the condition of Indian affairs at this agency from October 31, 1871, the date of assuming the duties of agent, to the present time.

After a careful enumeration of the Indians known to belong to this reservation, I find as follows: Of Wascos, 154 males, 134 females; Warm Springs, 131 males, 158 females; Terrinos, 16 males, 23 females; making an aggregate of 616 souls; of this number 128 are known to be absent without permission, as was more fully set forth in my communication to you under date of August 18, 1871.

I regret that I am not able to give a more favorable account of our agricultural prosperity. When I assumed charge here last fall there was only 120 bushels of wheat on hand for the subsistence of the infirm Indians during the winter; consequently I was not only compelled to purchase seed-wheat in the spring, but oats and hay for the department stock; and this season the department has not raised one pound of any kind of grain, although the usual amount of ground was properly cultivated.

The Indians had in cultivation about 700 acres; they raised over 1,000 bushels of wheat, besides oats, corn, and vegetables, though not more than one in every three raised anything. The principal yield was on the Schittack River, which affords but a limited amount of tillable land. All the other streams on which farms are located have been dry during the summer months. As soon as I was aware of the failure of crops I gave the Indians permission to go to Turn-Water, near the Dal-

les, after salmon, and furnished them with several tons of salt; they succeeded in securing over 35,000 pounds of salt and dried salmon; they have also secured an ample supply of roots, an excellent substitute for bread, and a large majority are now in the mountains after game; therefore I do not think any of them will require subsistence from the Government, except it be a few very old persons, or the winter should be unusually severe.

You will see by my statistical reports that these Indians are well supplied with horses, the present number being greatly in excess of former reports, while there is a decrease in the number of their cattle in a corresponding ratio. I am now trying to induce them to dispose of their surplus horses and invest the proceeds in something more beneficial, but as they believe that the larger the band of horses that they can call their own, the greater the honor attached to the owner, I have little hopes of success; while at the same time they will readily dispose of their cattle, especially for saddles, with which they are most all supplied. I shall stop, if possible, the further sale by them of cattle. I have had one frame house built for them this season, and bedsteads, tables, chairs, and benches, as they are called for; also they have been furnished window-frames and sash complete for their houses, and the demand for them as well as rough furniture is steadily on the increase, a gratifying evidence of their progress.

I found on my return Hop-to-wit, or Jacob Thomas, a native Wasco, in charge of the day-school. He remained in charge until July 31, 1871. Under his management there has been great improvement in the scholars, though he labored under the same disadvantages as all teachers under the present system, that of the intercourse of children with their parents out of school hours; this great draw-back I now propose to remedy, provided I am furnished with the means. I now have a new school-house well under way, and which I expect soon to have completed, where ample provision is made to board and lodge all the scholars, as well as instruct the girls and women in household duties, the latter to be under the supervision of a lady. I had proposed that the parents of the scholars would contribute for the subsistence of their children while at school, and they were all very willing to do so, but as their crops are a failure I am compelled to abandon this intention and depend entirely on the Government to make provision for the support of these children while at school, as I am convinced, after four years' experience, that this is the only way these children can be advanced.

I am very much gratified to be able to report the very great success of our Sabbath-school; all the Indians manifest great interest in its teachings, and this interest seems to be steadily on the increase, with both old and young. I have organized a Bible-class having some fifteen members, who read a chapter, and then it is fully explained to them; in these labors I receive great assistance from the employés and their families.

The health of the Indians has been as good as could be expected under existing circumstances; comparatively few deaths have occurred, though a majority of these were those we could least afford to lose.

I think a majority of the Indians now employ the physician provided for them, and are dispensing with their native doctors. I have been in the habit of issuing tea, sugar, and rice to the sick; this is very essential, as their own food is not at all suitable for them during convalescence.

Notwithstanding the failure of crops, which is so much calculated to discourage an Indian, I am able to report them as being generally contented and happy; the proposed allotment of lands meets their hearty

approbation, as they have a great desire to become the permanent owners of their own farms. In this connection I will state that I have lately found an excellent tract of land about twenty miles from the agency, and designated by the Indians as the Sin-e-marsh country, which will afford a large number of farms, and from appearances, and from all I can learn, crops will be almost sure and the yield ample; the visit of the Hon. F. R. Brunot, president of the board of Indian commissioners, to this agency, also gave them great encouragement, not only for the manner in which he addressed them, but they now believe that the President of the United States has their welfare at heart, by reason of his sending a man of such a "good heart" to talk with them, and they are now determined to improve themselves, and come up to the standard of the white man if possible; and as an earnest of this, there are a number of young men who are desirous of learning the different trades carried on here, but they are not able to give their time to the work and support themselves, and as there is no provision for this purpose I am unable to aid them. If provision could be made for board, lodging, and clothing of apprentices, it would be of great benefit to the Indians on this reservation. At the present time I have an Indian at work in the harness-shop to whom I have been paying \$1 25 per day; he can make a good set of harness after it has been cut out; he repairs all the harness both for the department and the Indians, and also does all the repairing of boots and shoes for the Indians; as far as repairing is concerned he fills the place of a good workman, and by his example stimulates others of his race to become mechanics.

I respectfully call your attention to the various reports of the employés herewith submitted, for information in detail in their respective departments.

In conclusion, I desire to acknowledge the promptness with which you have always abundantly supplied everything necessary for the welfare of these Indians, and they very quickly notice the contrast, in both quality and quantity, of the annuities now furnished, from what it was during former administrations of the superintendency, and they are encouraged accordingly.

Very respectfully, your obedient servant,

JOHN SMITH,  
*United States Indian Agent.*

Hon. A. B. MEACHAM,  
*Superintendent of Indian Affairs, Salem, Oregon.*

---

No. 14.

WARM SPRINGS AGENCY, *July 31, 1871.*

SIR: I have the honor to submit the following as my annual report:

I have held school steadily since my last report, made to your predecessor, with the exception of a short intermission during the Christmas holidays. The attendance of scholars has been regular, and, notwithstanding the great drawbacks under which a teacher of Indian children labors, with the present system of day-schools there has been considerable progress made, and under the new system proposed by you, of boarding and lodging the scholars, they will rapidly advance. The average attendance during the year has been about seventeen daily. With

what experience I have had, I am convinced the only way to permanently advance these children is to keep them entirely away from their parents.

Very respectfully,

JACOB THOMAS,  
*Teacher.*

JOHN SMITH, Esq.,  
*United States Indian Agent.*

---

No. 15.

UMATILLA INDIAN AGENCY,  
*Oregon, August 29, 1871.*

SIR: In accordance with the regulations of the Indian Department, and circulars from the Department of the Interior, Office of Indian Affairs, dated August 1, 1871, I have the honor to submit my first annual report of the condition of Indian affairs at this agency.

On the 1st day of May last I relieved First Lieutenant W. H. Boyle, United States Army, and assumed charge of this agency. I am unable to state anything in relation to the prosperity of these Indians from the date of the last annual report of my predecessor up to the time of my taking charge. I will therefore confine myself to their condition at that time and the short period that has elapsed since.

I found the agency buildings (so-called) in a most dilapidated condition, dangerous to inhabit much longer. I would therefore most earnestly and respectfully recommend that an appropriation be made by Congress to assist in the erection of new buildings; and I would respectfully suggest that they be erected at a point nearer the mills, which will enable the agent to superintend the work at the mills every day; located as we now are, seven miles from the mills, it is impracticable for him to do so. At the time of my taking charge I found that the mill-dam had been entirely swept away during the last spring freshet, and the saw-mill considerably out of repair. I at once went to work and had the saw-mill temporarily repaired; the dam, however, could not be replaced until low water, and I am now having a new dam put in and expect to have both the saw and flour mills running in a short time.

The stock turned over to me by my predecessor consisted of fourteen horses and mules, only six of which, viz, five horses and one mule, were serviceable as work-animals, and five head of very old oxen, totally unfit for service, having been in use on the reservation about twelve years. One of the oxen was stolen and butchered last June; I caused the thief to be arrested and he is now awaiting his trial at the next term of court in November, but I was unable to recover the value of the animal. We are greatly in need of five or six yoke of work-oxen.

Our harvest is now complete, and I am sorry to state that the yield does not nearly meet my expectations. On the department farm the oats are very light, and no wheat was sown this year by my predecessor, and at the time I took charge it was too late to do so. The Indians' crops are also very light, caused by the extreme drought during the months of May, June, and July. We were also visited about the last of July with a most tremendous hurricane or tornado, accompanied by a terrific hail-storm, which did great damage to the standing crops. However, having been able to secure a considerable amount of hay, I

hope to be able to feed the Government stock during the coming winter. It will be necessary, however, to purchase some wheat in the spring to issue to the Indians for seed. It is impossible at this time to make more than an estimate of the amount of grain raised by the Indians, but I trust that, notwithstanding the partial failure of the crop and its destruction by the storm, that they will have sufficient to carry them through the winter without suffering. For an estimate of crops, &c., see accompanying "statistical return of farming."

The fences on the department farm were in very bad condition, and also on the farms of the Indians. I have caused to be made about 1,000 rails, and have placed them around the department farm, thereby securing our crop this season.

The commissioners appointed by the President of the United States, in accordance with a joint resolution of Congress approved July 1, 1870, to negotiate with the Indians on this reservation, with a view of ascertaining on what terms said Indians would vacate the same, or take lands in severalty, met at this agency on the 7th day of August and held a council with the Indians, which lasted all the week. Hon. F. R. Brunot, president of the board of Indian commissioners, and Mr. T. H. Cree, his secretary, were also present during the entire council. The object of the resolution of Congress was fully explained to the Indians by the commissioners, and at the same time they were told that it was a matter on which, after duly taking into consideration all the circumstances, they must make up their own minds; and great care was taken by the commissioners, in accordance with the instructions of Hon. E. S. Parker, Commissioner of Indian Affairs, that the Indians fully understood the propositions presented, and that no outside influence was brought to bear to induce them to agree to anything they might hereafter regret. After the matter had been fully discussed, the Indians declared that they would not part with their present reservation, and none of them expressed a wish to take their lands in severalty. A full report of the action of the commissioners will doubtless be forwarded by them at an early date.

The constant fear and expectation of the Indians that they would soon be removed from here has been a great drawback in the past, but now that the matter is settled that they will remain on their present reservation it is hoped that they will go to work and improve their farms.

In a former part of this report I alluded to the condition of the agency buildings, and suggested the necessity of an appropriation being asked for the erection of new buildings. This I find has been reported upon several times by former agents, and the matter urged upon the attention of the Department at Washington; but in consequence of a doubt existing in their minds as to the permanency of this reservation the matter has been laid over until that question should be determined. It now being permanently settled by the action of the council, and the refusal on the part of the Indians to give up their present home, I would beg leave respectfully to call the attention of the Department to the report of my predecessor, Lieutenant W. H. Boyle, made on the 26th day of January, 1871, in answer to a letter of honorable Commissioner of Indian Affairs, dated December 29, 1870, calling for the same, and hope that it may receive the immediate attention of the Department.

Shortly after taking charge of the agency I was notified by you that a contract had been made and approved for the survey of this reservation, and on the 9th day of May last Mr. Z. F. Moody, deputy United

States surveyor, reported to me and showed me his contract and instructions. Mr. Moody at once commenced work, and about the latter part of the month of June he informed me that he had completed his contract; that he had run and marked the boundary line of the reservation, and had also sectionized a portion of the arable land on the same. But as no maps or field-notes of the survey have been placed in my possession, I do not know precisely what portion of the same has been surveyed. I would respectfully recommend that, as soon as practicable, a map of the same be obtained from the surveyor general of Oregon for the use of this office.

Although there has been considerable sickness among the Indians during the past few months, there have been but few cases of a dangerous character, nearly all being of a mild type, yielding readily to the treatment of the physician; and I am happy to say that at the present time their sanitary condition is generally good.

In addition to what I have stated in a former part of this report in reference to the mills, I would recommend that the saw-mill be removed to a point farther up the river, where it would be accessible to the timber, and thus avoid the great outlay now necessary to procure logs, which have now to be hauled a distance of over seven miles. This I think would only require an additional appropriation of \$500.

I much regret that the present condition of the school at this agency does not meet my wishes. I have, since I took charge, strenuously urged upon the chiefs and head-men to assist me in my endeavors to get the Indians to send their children to school, and have tried to impress upon their minds the advantages that would accrue to them by their so doing. In my exertions in this behalf I have received the hearty assistance and co-operation of the Rev. Father Vermeersch. Some of the chiefs and head-men have promised that as soon as their people return from hunting and fishing that they will give me what assistance they can. The school has been closed for a few weeks as it was impracticable to carry it on during the late council, and after the council most of the scholars were taken by their parents to accompany them to the mountains for a short time during their regular hunt. During the vacation the Rev. Father Vermeersch has visited Portland for the purpose of consulting his bishop in regard to the spiritual condition of the Indians. I have delayed my report until I could have the report of the Rev. Father Vermeersch, which I have just received, and to which I would respectfully refer you for a more detailed account of the school and the moral and spiritual condition of the Indians under my charge.

Very respectfully, your obedient servant,

N. A. CORNOYER,  
*United States Indian Agent.*

Hon. A. B. MEACHAM,  
*Superintendent of Indian Affairs, Salem, Oregon.*

---

No. 16.

UMATILLA INDIAN AGENCY,  
*Oregon, September 6, 1871.*

SIR: I have the pleasure, in accordance with your request, to submit the following report of the school for the year 1870-71:

During the winter season the number of scholars amounted to 23,

but in summer it was reduced to 16, viz, 9 boys and 7 girls. The school on this agency being simply a day-school is certainly insufficient for the rapid civilization of the Indians; but, after all, no unbiased man can deny that it has effected a great deal of good. The children that have frequented it are certainly more civil, better dressed, and more modest in their behavior than they were before. I hope that this year I shall be able to increase the number of scholars, and I have made efforts to procure the assistance of another competent teacher.

Now that it is decided that our Indians will remain on this reservation, I have confidence that the Indian Department will take steps to establish the school on the basis of a "manual-labor school," the only system by which the real civilization of the savage can be advanced and secured.

I am pleased to state that our Indians seem to take more interest than before in their spiritual welfare. The services on Sunday are better frequented, and many more have joined the church. You are aware that their conduct and behavior are generally good. Let us hope that their good example and the light of the Gospel may have a good influence over the minds of those who are yet buried in the darkness of paganism, and that finally all will submit to the civilizing influences of Christianity.

Respectfully yours,

G. A. VERMEERSCH.

N. A. CORNOYER, Esq.,  
*United States Indian Agent.*

---

No. 17.

ONEATTA, YAQUINA BAY AGENCY,  
*October 1, 1871.*

SIR: I have the honor of submitting this my eighth and last annual report of the affairs of Siletz agency.

I closed my term of service as agent on the 1st day of May, 1871, at which time, as you are already aware, I turned over the agency to my successor, Hon. Joel Palmer. Since then I have been busily engaged in making up my final papers. This task, I regret to say, is not yet entirely finished. The delay has been owing to some irregularities, occasioned by a change of employes, and to other causes over which I have had no control. I shall now, however, push the work forward with all possible dispatch, and shall soon have my papers fully completed. I ask, for that purpose, your indulgence, and that of the Department, for a short time.

I presume it will hardly be expected that I should at this time enter into the usual details concerning the affairs of the agency. All the important facts which have not been communicated to the Department by myself heretofore will undoubtedly be embodied in the first annual report of my successor. He will find it convenient, if not necessary, in introducing himself officially to the Department, to give some sort of a summary of the condition of the affairs of the agency at the time he took charge. I feel therefore that it would be altogether a work of supererogation for me to go over that ground in detail. As this is my last report, after a somewhat protracted term of service in charge of Siletz agency, I think it not inappropriate that I should present here a few statements

of facts in the history of the dealings of the Government with these Indians, in order to show some of the difficulties with which I have had to struggle. I shall also presume somewhat upon your indulgence by offering some suggestions, prompted by my own experience, concerning the future management of the Indians over whom I have so long had control.

I have had charge of Siletz agency for eight years, and in that time have had to encounter many stubborn obstacles to the successful management of its concerns. I think, too, that I may say, without vanity, that I have *overcome* many such obstacles. It is not an easy matter, even under the most favorable circumstances and with all possible helps, to conduct successfully the affairs of an Indian agency. To a race accustomed, as the Indians have been, to the licentious freedom of the savage state, the restraints and dull routine of a reservation are almost intolerably irksome. It is not wonderful, therefore, that they should be often fractious and impatient of control, or that, even when reduced to complete submission to the regulations imposed upon them, they should, in many instances, become sullen and unteachable. To manage such a people in such a condition with any degree of success requires unceasing, anxious labor. Yet this is the duty imposed upon almost every Indian agent in the United States. But in addition to these difficulties, which are incident to Indian management everywhere, there are some which are peculiar to Siletz agency. There are at this agency some fourteen tribes and parts of tribes of Indians, numbering, in the aggregate, at the time I took charge, about 2,500. Separate treaties were made with all of these different tribes in 1855, at the conclusion of what is known as the "Rogue River War," in Southern Oregon. Some of these treaties have been, in part, confirmed and complied with by the United States Government, but most of them have been entirely and persistently disregarded. In expectation, however, of the immediate ratification of all the stipulations entered into, the Indians were all removed from their lands in the Rogue River country to Siletz reservation at the close of the war above referred to. Here they have been kept ever since as prisoners of war, supported by a removal and subsistence fund, appropriations for which, varying from \$10,000 to \$30,000, have been annually made by Congress. For sixteen years this scant, irregular, and uncertain charity, doled out to them from time to time, has been the only evidence they have received that they were not utterly forgotten by the Government. For sixteen years they have been fed upon promises that were made only to be broken, and their hearts have sickened with "hope deferred." For sixteen years they have seen the white man gathering in annually his golden harvests from the lands which they surrendered; and for all those sixteen long, weary years, they have waited, and waited in vain for the fulfillment of the solemn pledges with which the white man bought those lands. What wonder is it that, suspicious and distrustful as they are by nature, they should, under such tuition, cease to have any faith in the white man's word, or to heed his solemn preachments about education and civilization? Who can blame them if, after such an experience, they come to regard the whole white race, from the Great Father down, as a race of liars and cheats, using their superior knowledge to defraud the poor Indian? And is it amazing that, with such an eminent example before them, they should grow treacherous and deceitful as they grow in knowledge; or, that they should use every possible exertion to escape from the restraints which, as they believe, the white man has imposed upon them only for the purpose of defrauding them? In my judgment, it is safe to

assert that by far the greater part of their restiveness and indocility is justly attributable to this cause. I am fully satisfied that it has more than doubled the difficulty of controlling and managing them for the past eight years. So thoroughly have I appreciated this fact, that I have again and again urged, in my annual reports, the necessity of entering into treaties with the Indians at this agency who are not now parties to any stipulations. Feeling, as I do, that the neglect with which these Indians have been treated in this particular has been most unwise as well as grossly unjust, I cannot permit this last opportunity of expressing myself officially on the subject to pass without again earnestly urging a speedy correction of this grievous error and wrong.

Notwithstanding the many embarrassments with which I have had to contend in the management of the affairs of this agency, I am fully satisfied that no Indians on this coast have made any more rapid advancement than those under my charge, in industry and civilization. When I entered upon the discharge of my duties as agent, eight years ago, I found the Indians in almost a wild state, kept together and controlled by military force. This condition of things rapidly disappeared, and for the past four or five years I have succeeded in keeping the Indians generally upon the reservation, and in controlling them without any other aid than a very small corps of employés. And when I turned over the agency to my successor the state of discipline was far better than it was at any time when the agent had the assistance of a detachment of soldiers to enforce his orders. Besides, the Indians have, many of them, attained a comparatively high degree of proficiency in the useful arts. About all the mechanical work needed on the reservation can now be done by them. Indeed, so great has been the improvement among them in every respect that, in my judgment, many of them are to-day capable of becoming citizens of the United States, and should be admitted to citizenship as soon as circumstances will permit. Knowing as I do the liberality of your views on the subject of the equality of men, I feel confident that you will spare no effort in your power to bring about this state of things at as early a day as possible.

Before closing this report permit me to make one suggestion as to the management of the Indian agencies under the system lately adopted by the Government. I am satisfied that under this system it would be a matter of economy, as well as a benefit to the Indians, to place the whole subject under the immediate control of the superintendent, doing away with agents entirely. Each reservation could be managed by a sub-agent appointed by the superintendent, and subject to his supervision and control. The superintendent should then be held strictly responsible for the management of the reservations or agencies within his jurisdiction, and the various sub-agents and employés should be made accountable to him alone. The disbursements could be made by the superintendent, and the accounts for the whole superintendency could be kept in his office. The advantages of this system would, undoubtedly, be great. It would reduce considerably the machinery of the Indian Department, and would simplify all its processes. Besides, it would render those who had the management of the different reservations amenable for their conduct not to a distant authority, but to one at home. Their acts would thus be judged, and condemned or approved, as the case might require, in every instance by one who would have, to a great extent, a personal acquaintance with all the circumstances. Under the present arrangement the Indian Department is little better than a gigantic circumlocution office, in which everything is done by indirect and circuitous methods. Every agent renders his account, and is respon-

sible (nominally) to the central office at Washington, and not to his immediate superior. In this labyrinth of routine and red-tape official incompetency and dishonesty may often hide securely. On the other hand, wise management and worth frequently escape notice altogether or receive censure instead of commendation. In fact, there are in each superintendency so many different centers of power and influence, each of which must be watched from the head of the department, that the view is distracted and bewildered, and official accountability degenerates into a mere farce. The superintendent, though he has a sort of supervision of the different agencies, is yet really powerless to correct abuses which may come to his notice. His subordinates are not responsible to him, and he can do no more than report their incompetence or misconduct to the common superior of all, and then await the tedious processes of circumlocution. His jurisdiction is, in fact, merely formal, rather than actual, and he is not responsible for the conduct of his subordinates; there is but little motive for him to exercise even the slight power which he has. The only remedy is to give him full authority over all the agents and sub-agents, and to make him personally accountable for their official acts.

I think that the necessity for this change is now more urgent than ever before. As a religious element has been infused into the management of Indian affairs, and as agents are appointed upon the recommendations of the different churches, there is danger that, in the search for piety in those who aspire to office, certain other very respectable and necessary qualities may be lost sight of. It is quite as needful that appointees should have some talent for affairs as that they should have the spirit and form of godliness, yet the former does not always accompany the latter. Many very good and pious men are but children in the business of the world. It is also a fact of common experience that if religious bodies are left to select men for responsible positions of any sort, they are apt to choose them more on account of their zeal in the service of God or of some gift of exhortation or prayer, than on account of capability for business. I know that thus far the President has been very fortunate in his selections of men to carry out his new "Indian policy," but depending, as he must, upon the recommendation of church organizations in these matters, he is liable hereafter to make the mistake I have mentioned, and appoint men to office whose piety constitutes their only fitness for the positions they are called upon to fill. It is in view of this danger that I particularly recommend the propriety of making the change suggested above.

With many thanks for the distinguished consideration which I have received at your hands in my official dealings with you, I have the honor to be, your most obedient servant,

BEN. SIMPSON,  
*Late United States Indian Agent.*

Hon. A. B. MEACHAM,  
*Superintendent Indian Affairs in Oregon.*

No. 18.

OFFICE SILETZ AGENCY,  
*September 9, 1841.*

SIR: I have the honor to submit the following as my first annual report of the affairs of this agency. In making this, my first report, I

may not be able to set forth all the facts that ought to be known in order to induce the proper kind of legislation to secure the wants of the Indians upon this reservation, and that kind to which they are justly entitled.

If we take the Indians of this agency as a criterion by which to judge of the merits of the civilizing progress for the last sixteen years, there is but little to encourage us, for while a little improvement may have been made among a portion in regard to apparel and ordinary work in the field, it is difficult conceiving of a people who have sunk lower in the scale of morals and all the vices to which civilized or savage people can reach, than is found among these Indians. If there be an honest or virtuous male or female among them, it is an exception rather than a rule. The child is educated from its infancy to steal. The women are bought and sold like cattle, and, as a general rule, the number of wives owned by the man is limited by his means to purchase, the price ranging from ten strings of aroquois shells of ten each, to five horses. The daughters are loaned, hired, or sold at from twelve to sixteen years of age, as inducements are offered, sometimes for one night, one month, a year, or a bona fide sale, the purchaser casting her off at pleasure, and when so cast off or divorced, the property originally paid must be refunded. The feelings of the girl or woman are seldom consulted. If they have no parents, the nearest of kin, or, if no relations, the heads of the family or tribe to which they belong, make the sale and receive the purchase-price; and it is often the case, after a woman has been thus disposed of and matters settled, that another relative or tribal claimant makes a demand upon the purchaser, and an additional amount must be paid. This plurality of wife system, and the recognized right of the man to cast off the bands, is a fruitful source of contention, for it is often that the woman is returned for the purpose alone of securing a return of the property or gifts originally paid; and one of the worst features of this degrading system is, that it extends to the whites, who have been their teachers in many of these debasing vices.

Considerable progress has been made in the surveys, but the dense growth of fern, brush, and weeds, and the circuitous course of streams, with precipitous cliffs and mountain ranges, renders it a slow and tedious task. I have had detailed one and sometimes two persons to accompany the surveyors, to aid in marking lines and designating corners; yet with even this precaution, I fear it will be difficult tracing lines another season, as fires have been raging through the uncultivated portions of the agency, and in many localities have obliterated every trace of surveys.

Much interest is manifested among the Indians in relation to the allotment of land, but we cannot hope to amicably adjust the conflicting interests involved until a saw-mill is erected, so as to obtain lumber to build them houses, in lieu of those to be vacated when land is assigned them in severalty. At the central or home farm, the greatest number of the Indians are residing upon the land best adapted to the use of a manual-labor school and for agency purposes. The Government buildings are located upon this tract, as are also about sixty Indian families; and even if this were allotted to Indians, the greater number of them would be compelled to rebuild, as they are now huddled together in small villages of from ten to fifteen families. The character of the buildings belonging to Government is not such as can be conveniently removed, and in fact many of them are too much dilapidated to be longer fit for habitation; and the site now occupied is probably the best

location on the agency for such purposes, being nearly central between the upper and lower farms, the extremes being about twelve miles; besides, this is the largest body of land suitable for cultivation. The system of farming heretofore adopted has been to generally have large fields, bordered on one side by the river, and these fields cultivated by from ten to fifteen different families, each having their separate tracts designated by stakes or strips of uncultivated land; but when the allotment of land is made, it will involve the necessity of much additional fencing; in fact nearly all the fence upon the reservation must be rebuilt, for in addition to the fact that changes are to be made, nearly all the fencing is so old and so much decayed, that but little remains sufficiently sound to make into new fence. Had we provisions with which to subsist them, the Indians might be induced to make rails the coming winter for new fence, and a portion might also be employed in clearing off brush-land, which, when assigned to Indians, would place them upon an equal footing with those who obtain prairie and lands already improved.

The absence of teams among the Indians is a constant source of trouble and embarrassment, it being very difficult, with the limited number of agency teams, to distribute them so as to even partially meet the requirements of the Indians. The work-animals belonging to this agency, both horses and cattle, with but few exceptions, are entirely worn out and unfit for service; many of the oxen are so old they cannot masticate dry food, some of them partially and a few totally blind, and I fear quite a number will perish the coming winter from sheer old age. The horses are, many of them, quite old and badly stiffened by hard and constant usage.

All the feed, harness, wagons, plows, harrows, &c., in fact all agricultural implements, and the expense connected with keeping them in a condition to use, has been borne by the Government, and in the event an Indian produces more than he requires to subsist upon, he disposes of the overplus to whomsoever will pay most, thus losing the lesson of self-reliance; for when he desires his ground plowed, his grain hauled, or any other team-work performed, he calls upon the agent; so, also, if he has use for any agricultural implements of any description, he calls upon the agent, and seldom returns any tools so obtained unless specially required to do so. We greatly need some thirty or forty span of horses, with wagons, harness, plows, &c., yet these implements might be manufactured in the shops upon the agency, so as to teach some of the young Indians in each of these branches of industry, or, perhaps, a more effective method would be to apprentice them to mechanics off the reservation and away from the superstitious influences of their people. With the foul condition of the cultivated portions of the agency, at least ten additional plow-teams should be started this fall, and by this effort to assist the Indians we would remove great doubt from their minds and encourage them to put forth new efforts in agricultural pursuits.

The present has been a very disastrous season for farming operations upon this agency. The continued rains until the 10th of June so retarded the putting in of crops, that nearly every variety is too late to fully mature; besides, several severe frosts about the first of the present month destroyed the greater portion of the potato crop, and, in fact, all varieties of vines, and much injured the corn and beans. The hay crop was good, but the quantity of meadow is entirely inadequate to the requirements of the agency. The early sown oats yielded a pretty fair crop, but little, however, was sown for Government use until after my arrival, and I fear that sown after the date of my assuming charge will

but partially mature. For further information upon this subject, I will respectfully refer you to the statistical return of farming herewith submitted.

No successful effort seems to have been made to induce these Indians to obtain domestic animals. With the exception of George Harney, a young Rogue River chief, who has nine head of stock cattle, not a single head of the cow kind is owned by any of these tribes, and, with but few exceptions, no horses are owned by them suitable to work.

It was contemplated, at the time of selecting this coast reservation, to purchase, for the benefit of the Indians to be located here, herds of cattle and sheep, believing then, as I do now, that these Indians could be more easily induced to become a pastoral or stock-raising people than as exclusive cultivators of the soil. Quite extensive tracts of tide-lands are situated upon this reservation, along the shores of the Siletz, Nestucca, and Salmon Rivers, and rolling sand-hills, coated with nutritious grasses, abound along that portion of the sea-coast, and the adjacent mountain slopes and valleys all afford the best of grazing for cattle, sheep, and goats. If one-fourth the amount that has been thrown away in the purchase of trinkets and useless farming implements, and in unprofitable experiments, now visible at every turn, had been expended in the purchase of that kind of stock, even ten years ago, if properly directed, would have made this a wealthy and prosperous people, and with the additional advantage of the allotment of land in severalty, as originally contemplated, furnishing each family with one or two cows, would have given them an individual interest in their homes that would have made a strong contrast to the roving, thriftless people they now are. It is not yet too late to attempt this policy among them, although much more difficult to accomplish at this late date, as the same number of cattle or other stock could have been purchased then for one-half the sum now demanded. Still, if Congress could be induced to make an appropriation of four or five thousand dollars for the purchase of stock for these Indians, it would, in the end, be great economy to do so.

The early construction of a saw-mill upon this agency is a matter of the greatest importance. The Government buildings as well as those of the Indians are generally very much dilapidated, and many so far decayed that the expense of repairing would almost be equal to that of rebuilding; besides, the changes of residence, in consequence of the allotment of land, will require the erection of many new buildings, and a little interest exhibited in the style and manner of erecting these buildings will do much toward making the homes of the Indians attractive, and aid materially in reforming and changing their reckless habits. I therefore earnestly desire and hope that an appropriation for this purpose may be secured. Under the circumstances, it is my opinion that a portable steam-mill would be preferable to any other, and would cost, with the addition of transportation, about three or four thousand dollars. There is an old excuse of a mill at the upper farm, six miles distant, but it is hardly worth repairing, though, if repaired, it may be made to saw a sufficient quantity of lumber to supply the demands of that station.

The only means we now have of obtaining lumber is to purchase of the Oneatta mills, situated on the Yaquina Bay, boating it up the bay seven or eight miles to the mouth of Depot Slough, thence up the slough three miles, to Premier mill, and from that point hauling over a mountainous road, fording the Siletz River, to the agency, a slow, tedious, and

expensive method of obtaining lumber; besides, during a portion of the winter season, it is impossible to cross the river with wagons. We will also require a flouring-mill, as the one reported as such, recently built, is useless for any purpose; the building, with proper improvements, may be made a dwelling, but it is difficult to imagine any useful purpose to which the mill could be applied upon this agency. The horse-power may be made useful to propel a lathe or some such purpose. The samples of wheat grown here the present season warrants us in believing that it can be produced in sufficient quantities to meet all the requirements of the agency. At present, all the flour consumed upon the reservation is hauled from King's Valley, a distance by nearest wagon-road of not less than fifty miles. For a time the steam-power of the saw-mill, if one is obtained, might be applied to propel the grist-mill; still, it would be better to have them separate, and in that event it would probably require an appropriation of from \$3,500 to \$4,000. There are several streams upon the reservation suited to mill-power, but none applicable convenient to the home or central farm. It appears that an effort was made by Agent Metcalf to erect a mill upon a stream emptying into Siletz River, about one mile distant from the agency buildings, and quite an expenditure of Government funds seems to have been made, but it was found that the back-water from the river destroyed the power at the only times when the stream afforded a column of water sufficient to run the mill, and the enterprise failed, and the entire expense, whatever it was, was lost to both the Government and Indians. The burrs are still there, exposed to the elements, and the dam partially washed away.

I have recently been examining the Siletz River as to the feasibility of the construction of a dam across that stream about one and a quarter miles above the agency buildings, and the opening of a race to intersect the river again about one-fourth of a mile below, the entire distance of the race being, perhaps, a little more than a mile and a half, while the circuitous course of the river between these two points is not less than seven miles, with a continued succession of rapids. We have no instruments with which to take levels, but it is believed that a fall of at least thirty feet could be obtained by thus damming. The dam need not exceed 10 feet in height nor more than 200 in length, and the banks are very favorable for the construction of a dam at this point. The ground over which the race will pass presents a sag almost the entire distance, decidedly favorable, the exception being a gravel bench of perhaps near one-fourth of a mile, where it would require a cut of 10 or 12 feet in depth. Could these suggestions be realized, it would make one of the most valuable water-powers in the State, and would be sufficient to propel all the machinery required on the agency. I regard this as a matter of great importance, and would ask that a survey and estimate of expenses might be had of the premises by practical engineers.

The sanitary condition of those people, I regret to say, is by no means flattering, for many reasons. They have but few comfortable dwellings, mostly living in huts and lodges, destitute of floors, windows, chimneys, or any conveniences suited to health and comfort, and, in fact, many of their houses are but little if any better than the ones occupied by them in their old mountain haunts, previous to their removal to this agency. Their diet is of an unhealthy character, subsisting upon fish, potatoes, and oats often for months at a time, and not unfrequently without a sufficient supply of even these articles. The distance to their fishing-grounds, by the nearest available route, is some twenty miles. The superstitious notions of the Indians in regard to their doctors or

"medicine-men" are very difficult to overcome. They, with but few exceptions, believe that their "medicine-men" can "will" their death, and they must inevitably die. Another great drawback to the treatment of diseases among these Indians is the presence of syphilitic affections among at least four-fifths of all the Indians belonging to this agency; in fact, this disease is so prevalent among them that its effects are becoming apparent among the reckless portions of whites to an alarming extent. The erection of a hospital, where the old, helpless, and crippled Indians could receive attention and subsistence, and be under the immediate supervision of the resident physician, would aid us materially in this great and important work, as it is impossible for a physician to administer to the wants of the sick in their present scattered condition, many of them living a distance of six or seven miles from the physician's residence, and his presence required at different points at the same time; some must be neglected. I would, therefore, respectfully ask for an appropriation for the erection and maintenance of a suitable hospital at this agency. When I assumed charge of the agency, (May 1, 1871,) many of the Indians being without provisions, I was compelled to give passes to quite a number to go out to the valley and work, or permit them to suffer, as I had no means to purchase subsistence. Some of those leaving were industrious, and purchased clothes, provisions, and, in a few cases, work horses; while many others idled their time about the towns, drinking and selling out their women to profligate whites, and greatly annoying the citizens, and have since returned to the agency, many of them sick, as they were imprudent in their diet as well as habits, ague and fevers prevailing among them, as also bowel complaints. The fatality, however, thus far has not been very great.

The schools upon the reservation have evidently been greatly neglected, and the policy adopted in regard to them very obnoxious to the Indian, for upon my arrival among them the mention of establishing schools was received with disfavor. There is no building upon the agency suitable for school-rooms, nor any seats or desks. The building heretofore used for that purpose is attached to a dwelling, and is old and dilapidated, and unfit for use.

I much doubt whether there are to exceed six children among the tribes, under the age of sixteen years, who can call off the alphabet. The constant repetition of the great importance of acquiring an education is making a favorable impression among them, and it is my opinion that, as soon as we can erect buildings, we can gather together a sufficient number to maintain a good school. Owing to the scattered condition of the settlements, we will require at least three day and one manual-labor schools. As a general rule, the teachers in the day schools should be females, as they can be had at less figures, and would be received among the Indians with more favor than male teachers, and could, by example and counsel among the mothers of the children, exert a great influence in this work of reform, and it is among the female portion of the Indian race that we must look for the greatest results in accomplishing this work.

Much of my time has been consumed in adjusting difficulties between Indians. In the absence of head chief or prominent men, or the existence of any code of laws for their government, the settlement of these cases often involves an unpleasant and difficult task. We have in contemplation the calling of a council for the purpose of electing a number of Indians to act as a jury or court, before whom all minor cases may be adjusted. If this can be done successfully, it will, in my opinion, give

more general satisfaction, and consume less of the time of the person in charge.

I am, very respectfully, your obedient servant,  
JOEL PALMER,  
*United States Indian Agent.*

Hon. A. B. MEACHAM,  
*Superintendent Indian Affairs, Salem, Oregon.*

---

No. 19.

CALIFORNIA SUPERINTENDENCY.

CALIFORNIA SUPERINTENDENCY,  
*San Francisco, September 1, 1871.*

SIR: I have the honor to submit my annual report for the fiscal year ending June 30, 1871.

In pursuance of an order of His Excellency the President of the United States, I had the honor to resume the active duties of superintendent of Indian affairs for California on the 1st July, 1870, receiving from and receipting to Brevet Major General John B. McIntosh for the public property and moneys remaining in his hands.

Requisitions for supplies, sent forward by the agents, were on file, demanding my immediate attention.

Twelve hundreds pairs of blackets purchased by General McIntosh, under contract with the Mission Woolen Mills, deliverable August 15, were received and paid for in accordance with its stipulations.

Proposals for furnishing supplies during the year were advertised for, bids received, contracts executed and approved, purchases made, and supplies sent forward to the agencies during the months of September and October.

Immediately thereafter I made a tour of inspection, visiting successively Hoopa, Round Valley, and Tule River Indian reservations.

HOOPA VALLEY.

Captain S. G. Whipple, U. S. A., was assigned to this agency May 23, 1870, in place of Lieutenant Spaulding, removed. He found the Indians much demoralized and greatly scattered. His administration of Indian affairs during the short period of his service was marked with sound judgment and rigid economy. He was succeeded by the present agent, David H. Lowry, March 13, 1871.

In common with other portions of the State, this valley suffered from extreme drought, and the vegetable crop was almost an entire failure, rendering it necessary to purchase potatoes for consumption, as also for seed.

With a view of conserving the live stock until such time as its increase will meet the requirements of the reservation, beef has been purchased for consumption. Under the present careful management it is hoped that at an early day this outlay may be avoided, and that the recurrence of more propitious seasons will increase the agricultural yield of the valley.

This reserve extends along both banks of the Trinity River about eight miles. The farms are divided by sharp mountain points extend-

ing to the river, alternating in such manner as to require many subdivision of laborers, each under the immediate management of an employé, involving a necessity for a larger number of buildings and more agricultural implements than usually required on a compact reservation.

The saw-mill is old and of little or no service without expensive repairs. In view of the necessity for lumber to erect school-houses, dwellings, barns, fencing, &c., I have made arrangements for the immediate construction of a new mill at a more favorable site. The estimated cost, exclusive of unskilled labor that can be furnished from the reservation, will not exceed \$1,000 for an ordinary structure, or \$2,000 for a first-class mill, with requisite apparatus for hauling logs from the river.

The site selected is adjacent to an excellent timber tract, on the southeasterly portion of the reservation.

There is one school maintained under a salaried teacher. There should be at least three, on account of the scattered situation of the Indian families, and the difficulty of fording the river at certain seasons of the year.

Here, as at the other agencies within this superintendency, religious exercises are conducted with considerable regularity by the agents and clergymen of the Methodist Episcopal Church, and visited occasionally by Catholic priests who baptize such as desire it. The latter attend also exclusively to the religious culture of the Mission Indians in the southern part of the State, who, by education, are wedded to that faith

#### KLAMATH INDIANS.

I would respectfully invite attention to the destitute and impoverished condition of the Klamath Indians, residing on the Klamath River, and adjacent to the Hoopa reservation. They number, per last census, 2,365. They were formerly under the charge of a sub-agent, and a farm was cultivated successfully for several years, which was finally washed away, with its improvements and growing crops, in the year 1861, a full account of which, by Superintending Agent G. M. Hanson, is found on page 313, Indian Reports of 1862.

The lands along the Klamath, and for many miles on each side, are utterly useless for white settlement, and never would pay the expense of a survey. Game and fish are abundant, and a few small patches susceptible of cultivation. Within, however, three miles of the river, upon either side from its junction with the Trinity to its mouth, there cannot be found 160 acres, or the half of it in a compact body, fitted for white settlement.

I would therefore respectfully recommend that the Hoopa reservation be so extended as to take the river and the land for three miles back upon both sides to the Pacific Ocean, and thereby include the Klamaths, without requiring any to remove, other than those who may prefer to live at Hoopa. These Indians receive medical treatment at Hoopa, and the destitute who are known to be friendly often receive subsistence and clothing. If they were provided with implements of husbandry, a few yoke of oxen, seeds, and a white man from the reservation to assist them, they could raise vegetables sufficient for their own consumption and for exchange with Hoopa for flour, clothing, &c.

The few patches along the river produce potatoes in great abundance. This particular crop is almost invariably a failure at Hoopa, and we are compelled to buy them every year.

These Indians are kindly disposed and desirous of assistance from the Government, without being obliged to leave their fishing-grounds.

#### ROUND VALLEY.

Lieutenant W. H. Andrews, U. S. A., was in charge from April 1, 1870, to April 1, 1871, when he was relieved by Hugh Gibson, the present incumbent. Its management during Lieutenant Andrews's term was evidently successful. And too much credit cannot be awarded Agent Gibson for his industry, fidelity, and sound judgment, thus far displayed.

The lands at Round Valley are of great fertility, and the climate conducive to a widely varied growth.

Notwithstanding the depressing influences of an unusually dry season, a large surplus has been produced, giving earnest of its capacity under more favorable circumstances. Every facility has been placed at the disposal of the agent, in order that the reservation may be a perfect success.

The proceeds of surplus produce have been applied to the purchase of thoroughbred stock and work mules, which were greatly needed. There are now at Round Valley some seven hundred and fifty head of cattle and nearly five hundred hogs. The stock is increasing yearly, besides supplying all the beef and pork required for consumption, and this despite the cattle-thieves who infest the adjacent country, and are on the alert to brand or kill, as opportunity offers.

The entire valley is capable of sustaining all the Indians in the northern portion of the State, and should have been devoted to such purpose. Attracted by its advantages of soil and climate, settlers have taken up the larger portions under various pretexts, in some instances claiming within the reservation fences. Large droves of stock are pastured with impunity upon the Indian lands, to the injury of that belonging to the Government. Some of the locations have been made in accordance with the swamp-land laws of the State—a very flimsy tenure, as it is well known there is no swamp and overflowed land in the valley, within the true intent and meaning of the law. The showing of the claimants, up to the time they obtained their certificates from the State, was entirely *ex parte*. The tardiness of the General Government in asserting its rights, gives additional encouragement to this class of claimants, and they buy and sell for as much as the land would be worth with a perfect title.

I would respectfully call attention to my letter to the Department, of date May 2, 1871, concerning trespassers on this reservation, as also that of the 8th May, 1871, relative to Hoopa Valley, neither of which have been answered. I am exceedingly anxious to know whether we have reservations with clearly defined limits, and, if not, I trust the attention of Congress will be again called to the subject. Unless some definite limits to this reservation are established by congressional enactment, encroachments will continue. In my annual report of 1869, reference was made to this matter, and a line between townships Nos. 22 and 23 suggested as the southern boundary. This would be a liberal compromise with the settlers, and give to them at least two-thirds of the valley, leaving but few to be bought off or removed.

Agent Gibson, in his report of last April, says:

I would respectfully recommend that now, while it can be done, the boundaries of the reservation be fixed, by taking the line between townships Nos. 22 and 23, extended to the north and middle forks of Eel River; the forks of Eel River as eastern and

western limits, and placing the northern boundary as far north as may be considered expedient. This plan I consider perfectly feasible. The lower part of the valley is occupied by settlers, whom it would require a large outlay to dispossess. Within the limits I have named there are but seven or eight settlers; but there is a constant disposition to encroach under the present circumstances.

This proposition of the agent meets with my entire approval, as the most practicable solution of the difficulty, and I recommend it to the Department for early consideration.

The fixed property of this reservation consists of agent's quarters, 3 dwellings, 2 blacksmitheries, mill-dam and flume, saw and grist mill, 4 store-houses, 8 granaries, smoke-house, corn-houses, 4 barns, 4 hay-sheds, hospital, corrals, fencing, gates, &c.

A school-house, store, agent's residence, and barn are in process of erection, in addition to the improvements of the present year.

A school was established in June last, under the management of Mrs. Gibson, and has been conducted with marked success. Upward of one hundred pupils are upon the roll, and with an average daily attendance of 45. Ignorance of the English language, the absence of a suitable school-building, with other drawbacks incident to the enterprise, have been bravely met and largely overcome. Mrs. Gibson, in her report, speaks very cheerfully of the good conduct of her pupils, and their desire for improvement.

#### TULE RIVER.

Lieutenant John H. Purcell, United States Army, assigned to this agency August 7, 1869, was relieved at his own request August 24, 1870, by John W. Miller, special employé; and the latter in turn by Charles Maltby, March 24 last.

The Indians at Tule became very much demoralized in the latter part of 1869, and in 1870 a census taken by Purcell, in the month of August, showed but 229 upon the farm. These numbers were materially increased under his immediate successor, Mr. Miller, who reported in November of that year 497, and in the following December 510.

The lynching of several Indians at that time (December) for the murder of a woman and two children, created great consternation among the others, and many fled to the mountains. Fears of Indian outrages upon the one hand, and threats against the reservation upon the other, resulted in the establishment of a camp of United States soldiers in the month of February last; subsequently peace and good order prevailed, and some of the absentees returned, bringing other Indians with them.

Upon the representations of Agent Maltby that the troops were no longer needed, the camp was broken up and abandoned on the 24th July following. On learning that an order withdrawing the troops had been made, citizens in the vicinity became much excited, and the agent induced to recall his action, too late, however, for effect. It would have been in accordance with my judgment if a company of soldiers could have been kept there to afford security to all parties.

This reservation is upon a rented farm of 1,280 acres, belonging to Thomas P. Madden, besides about 500 acres of Government land, inclosed many years since for Indian uses. The fences are poor, and for the last two years the summer crops have been mostly destroyed by stock. This season I have purchased fencing material, and every pains will be taken to correct the evil. The valley is very productive in ordinary seasons, but the prevailing drought has very seriously affected its capacity during the past two years.

In view of the improvements of a permanent character in the way of

fencing, building, &c., already initiated, I have deemed it advisable to renew the lease under which the farm is now held, or rather extend it for the term of five years from and after the 31st December, 1874, subject to the approval of the Department.

It is to be regretted that Congress failed to make an appropriation for the purchase of this farm, as recommended in my report of 1869.

The working teams at Tule are old and unserviceable, having been purchased some twenty years since by E. F. Beale. Requisitions from the agent for others are on file, and will be filled in time for the winter's work.

The old animals I propose to condemn and sell, as their existence is a detriment to the reserve.

#### MISSION AGENCY.

Special Agent J. R. Tansy relieved Lieutenant A. P. Green, United States Army, February 28th last, and on the 5th of April following the agency was abandoned, in pursuance of orders from Washington, and the agent disposed of the property and made his final settlement with this office.

Much discontent prevails among the Indians at this (to them) unexpected result. Some trouble has already arisen, and more serious disturbances apprehended hereafter.

There are, according to a census made by Lieutenant Green, 5,056 Indians in the counties of San Diego and San Bernardino, and known as Mission Indians, over whom the Government has for years had a special agent. Of this number 2,556 are living at San Pasqual, Pala, San Luis Rey, Temacula, and other rancheros in the immediate vicinity of the whites, and the remainder (2,500) in the San Jacinto and San Bernardino Mountains and their eastern slopes. These latter are but partially civilized. Very little can be done for them without a reservation, where they can be directed in agricultural pursuits and other industries of civilized life.

For many years past they have believed that lands would be set apart for their use, and that the valleys of San Pasqual and Pala would be selected for the purpose. The failure of that project leaves them at the mercy of settlers, with whom it is a question of time only when they will absorb the lands now occupied by the Indians, and leave them homeless wanderers.

Should the reservation project for these Indians never be revived, the right might be given them to locate upon the unsurveyed lands, and means provided by which they could maintain the possession thereof for themselves and their children without the power to alienate, and the lands so located to revert to the Government when such occupation ceases.

#### SUB-AGENTS SERVING WITHOUT COMPENSATION.

William Robertson, appointed by my late predecessor, General McIntosh, in December, 1869, over the Indians in Ukiah, Laurel, and Potter Valleys, has been retained by me in that position, to the satisfaction of all parties. So also with George Bucknell, sub-agent for Lake County. These gentlemen exercise a beneficial influence among the Indians in providing labor for them at fair wages with the farmers, attending to the details of contracting, collecting their wages, and seeing that a portion thereof is applied to the maintenance of the aged and helpless.

There are, according to a census report of 1870, made by me from the best and most reliable data, at the request of Francis A. Walker, Commissioner of the Census Bureau, some 31,000 Indians in the State of California. Of this number some 10,000 are wholly and in part provided by the Indian Department with subsistence, clothing, agricultural implements, medical treatment, &c., comprising those upon the reservations, the Klamaths in the northern portion of the State, and the Mission Indians of the South.

Others living in Mendocino and Lake Counties are under the supervision of sub-agents, who exercise a beneficial influence over them, and conserve their interests much better than if left to themselves. The balance are scattered throughout the State, eking out a precarious existence, often subjected to want and suffering.

In former years their villages were fostered and encouraged upon the large stock ranchos, from which the proprietors of the latter obtained their herdsmen and farm hands. Most of these large tracts have passed from the original owners and been subdivided. The necessity for the Indian no longer exists, and the field he occupied is now required by the owner of the soil. The condition of those upon the public lands is scarcely better, as settlers are rapidly absorbing them irrespective of the prior possession of the Indians.

Respectfully submitted.

B. C. WHITING,  
*Superintendent Indian Affairs, California.*

The Hon. COMMISSIONER OF INDIAN AFFAIRS,  
*Washington, D. C.*

No. 20.

HOOPA VALLEY INDIAN RESERVATION, CALIFORNIA,  
*September 1, 1871.*

SIR: In compliance with the requirements of the Indian Department, I have the honor to submit this my first annual report as agent of the Hoopa Valley Indian reservation. In submitting this report I would state that I relieved Captain S. G. Whipple, United States Army, Indian agent for this agency, on the 13th day of March, 1871, since which time I have been diligently engaged in ascertaining and ministering to the wants of the Indians placed under my charge.

On taking charge of this agency I found in the service the following employes, to wit: physician, blacksmith, assistant blacksmith, farmer, miller, carpenter, herdsmen, and one special employe in charge of the saw-mill. With the exception of the blacksmith, they were all unmarried men, and with the exception of the physician and blacksmith, I found them all living with or keeping Indian women. A few days after entering upon my duty as agent I had occasion to discharge all of them except the physician and blacksmith, as I did consider them proper persons to have charge and be among Indians, if the object to be attained was the elevation of the moral and intellectual status of the Indian character. Immediately after discharging these persons I appointed Christian men, with their families, to fill the vacancies, and I am pleased to state that the change was a most beneficial one, and that all the employes now engaged on this reservation are good, moral, and reliable men, whose example has a tendency to exert a very beneficial influence

over the Indians, instead of degrading and demoralizing them, and I have every reason to believe that their labors to civilize and Christianize the Indians will prove successful.

The number of acres of land under cultivation at that time were as follows, to wit: 300 acres of wheat, 50 acres of oats, and 100 acres of hay, from which I have harvested about 240,000 pounds of wheat, 13,000 pounds of oats, and 320,000 pounds of hay. I cannot at this time give the exact yield, as only a part of the crops has been thrashed. Owing to the fact that the lands on which the above crops were grown had been poorly plowed and had been cropped from year to year for the past ten years with the same kind of grain, the yield was much lighter than I had anticipated. It is my intention, during the coming season, to plow as much new land as possible, and summer-fallow as much of the old land as can be spared from cultivation. In addition to the above I have had put in about 10 acres of potatoes and 6 acres of peas. The peas yielded about 6,000 pounds, and the potatoes proved an entire failure. The products of the farm for the past season may be summed up as-follows, to wit:

| Crops.        | Acres. | Pounds. | Value.  |
|---------------|--------|---------|---------|
| Wheat.....    | 300    | 240,000 | \$7,200 |
| Oats.....     | 50     | 13,000  | 500     |
| Hay.....      | 100    | 320,000 | 4,800   |
| Peas.....     | 6      | 6,000   | 360     |
| Potatoes..... | 10     |         |         |
| Apples.....   |        | 25,000  | 1,000   |
| Peaches.....  |        | 5,000   | 150     |
|               |        |         | 14,010  |

I found all the buildings, with one or two exceptions, in a very dilapidated condition, totally unfit for the habitation of the several employés and their families; also all the fences old and rotten, and in many places broken down, so that the stock belonging to the agency, as well as that of the military, could roam at will in the grain-fields. No new fences, if I except a mile or two immediately around the agent's house, have been built since the valley was purchased from white settlers for a reservation. I have had the carpenter steadily at work ever since I took charge repairing old buildings and building new ones. I have had erected a new dwelling for the farmer, a new office for the agency, a blacksmith and carpenter shop, and two new horse-stables, besides repairing the old houses. Much time will be required to put everything in proper shape. It is my intention to set as large a force as possible at work making rails and shingles as soon as harvesting is over.

I desire, in this connection, to again call the attention of the Department to the fact that the saw-mill is almost entirely worthless, and unless a new one is built it will be utterly impossible to make improvements that are absolutely necessary. Where the present mill is located the timber that is fit for milling purposes is almost entirely exhausted; so much so, that I am unable to keep the mill running for want of saw-logs. There is a very desirable location for a saw-mill on the reservation, where there is an abundance of water and the best of timber, and if a mill was built there, it could be kept running the year round, and in a short time lumber enough could be sawed to supply the demand. Many of the Indians are very desirous of building new houses, and liv-

ing like white folks, and frequently ask me for lumber for that purpose, but with my present limited means of manufacturing it, I am unable to comply with their request. I have no doubt that if I could furnish them all with new houses, in a short time they would abandon their old huts and become more civilized and cleanly in their habits. In view of this state of things, I trust the Department will see the necessity of having a new mill, and authorize its construction at an early day. The cost of such a mill as would be required will not, in my judgment, exceed \$2,000 in money, as most of the labor can be furnished on the reservation. All the extra labor that would be required will be one millwright to superintend the work.

The number of Indians located on this reservation, as near as I have been able to ascertain, is about 800, nearly all of which are natives of Hoopa Valley and its vicinity, and are known as the Hoopa Indians. There are about 50 of the above number, known as the Siahhs, who were brought here from the Smith River reservation, and are natives of Humboldt County. Although there are but 800 Indians that are located within the limits of what is known as the reservation, I have to provide in a great measure for at least 1,200, 400 of them being Klamath Indians, who come here for medical treatment, and for the principal part of their subsistence, and in many instances, where I have found them destitute, I have furnished them with blankets, clothing, shoes, &c.

Most of the Indians under my charge are intelligent and industrious, but sadly in need of education and moral teaching. Very little, if any, attention has ever been paid to the moral elevation of these unfortunate beings. I have endeavored to impress upon their minds the great benefit of education; but, as yet, little has been accomplished. We have at this time a school in operation, under the charge of an accomplished teacher, Mrs. Wells, wife of the farmer, who devotes all her time in teaching the young Indians who can be induced to go to school. Owing to the petty feuds that exist among the several different tribes, it is impossible to get the children to go to one school, as their parents will not allow them to associate together. In order to carry out my ideas relative to teaching the Indians, it will be necessary to have at least three schools, for the reason above given, and from the fact that the children are living at different places on the reservation, scattered along the Trinity River for a distance of seven or eight miles. We have, in addition to the week-day school, opened a Sabbath-school, where many of the Indians, both old and young, assemble to receive religious instructions. This school is under the charge of Mr. Wells, the farmer, who acts in the capacity of superintendent, while the other employes and their wives act as teachers. I am in hopes that, by precept and example, to exert a very beneficial influence over them, and yet reclaim many of them from their present degraded position. In connection with the above schools, I should like, and I deem it of great importance, to have a school for teaching the Indian women the art of making their own, their husbands', and childrens' clothing. Many of them are very anxious to learn; and if such a school was opened, in a short time all of them would be able to make their own clothing. I would, therefore, respectfully request that I be permitted to employ a suitable person for that purpose, at a salary not to exceed \$500 per annum.

Herewith inclosed please find report of teacher for this agency for the time she has been in charge of the school.

The sanitary condition of the Indians has undergone no material change since previous years, from what I can learn. The principal ailment is venereal disease and its consequent evils. Consumption, blind-

ness, sore eyes, and ulcers, are the consequences. Dr. Force, the reservation physician, is doing all that science and humanity can dictate to effect cures; but without a proper hospital building, in which to treat and care for them, it is utterly impossible to stop the ravages of this disease. I am convinced that the close proximity of the military post to this agency, located, as it is, in the very center of the reservation, has a very demoralizing effect upon both the Indians and the soldiers. I have no hesitation in saying, and I think statistics can be furnished to bear me out in the assertion, that at least one-half of all the diseases among the Indians is engendered and kept alive by the continual cohabiting of the soldiers with the Indian women. The only remedy for this evil that suggests itself to me is that the post is entirely too close to the reservation, and should be removed to a distance of not less than fifteen miles. I have tried every remedy that I could think of to break up this most degrading and demoralizing practice, but with little or no success. Such practice is an abomination in the sight of God, a disgrace to the American Government, and shocking to all refined feelings, and should be broken up. I would therefore recommend that Camp Gaston be removed to some point at least fifteen miles from the reservation.

Before closing my report, I desire to call the attention of the Department to the necessity of providing in some manner for the Indians living on the Klamath River. From reliable sources I am informed that there are not less than 2,500 Indians living along this river. They are all peaceable and well disposed toward the whites, and are deserving of more attention than they receive at present. Hundreds of these Indians come to this agency annually for medical treatment, clothing, subsistence, &c., but with my limited supply of clothing, farming implements, &c., I am unable to minister to their wants as I should like to, and as they deserve. During all the Indian wars in this vicinity, most of these Indians were the friends of the white men, and rendered good service when they were called upon for assistance. For the benefit of these Indians, I would respectfully recommend that they be furnished with a supply of farming implements, seeds, &c., and that a special agent, or a special employé, be appointed to superintend and teach them how to put in crops, and have a general supervision over them. I would also recommend that all the lands lying along the Klamath River, from a point two miles above the mouth of the Trinity River, extending back to the summits of the mountains on either side, be annexed to the Hoopa reservation, and be declared a part of the same. I trust the Department will give this matter some attention, in order that these Indians may be provided for as humanity dictates.

Very respectfully, your obedient servant,

D. H. LOWRY,

*Indian Agent, Hoopa Valley Reservation, California.*

Hon. COMMISSIONER OF INDIAN AFFAIRS,

*Washington, D. C.*

No. 21.

HOOPA VALLEY INDIAN RESERVATION, CALIFORNIA,

*March 20, 1871.*

SIR: I have the honor to report that I have been relieved by Rev. David W. Lowry, recently appointed Indian agent, and that I have

transferred to that officer the property pertaining to this reservation, pursuant to instructions from your office of February 17th ultimo.

In my annual report of date September 1, 1870, I suggested the propriety of rewarding the Indians according as they should be obedient and industrious. After careful observation and much thought upon the subject, I adopted the plan of hiring Indians by the day, month, or job, paying them with blankets, clothing, shoes, &c., and have distributed these articles to others able to perform labor. The old people and children without relations competent and willing to provide for them, with all others needy and helpless, have been looked after and their wants supplied to the best of my judgment and ability. A trial of several months' satisfies me that this is the right course to pursue. The Indians see that this is just and fair, and all of the better class are in favor of it. There is now no difficulty in getting Indians to labor at any time. They not only respond willingly when called upon, but they manifest more interest and do better work. They are employed and paid for their labor, as they know is the custom among white people, and the result is that they seek opportunities to be employed. It was not (under the system of annual distribution) uncommon that Indians at work on the reservation were jeered at and made sport of by others for laboring, when they were to derive no more benefit from the same than would those performing no labor. These Indians comprehend the performance of service for pay perfectly well. They can be hired to do anything, and if well rewarded no disgrace or crime attaches. It having always been their custom to pay each other for services rendered, and seeing the same rule practiced by the white race, it is not to be wondered that they consider labor upon any other terms objectionable.

As to the conduct of the Indians on the reservation, I am able to report a great improvement in the last six months. They are, I believe, without exception, well-disposed, and willing to comply with the requirements of the agent when made known to them.

The crop planted consists of 400 acres in wheat, 50 in oats, and 10 in peas, leaving sufficient breadth of volunteer to insure a good supply of hay. Care was taken to thoroughly prepare the ground before applying the seed, and with corn, potatoes, and other spring crops yet to be planted, there is hopeful promise of a greater supply of food for the Indians the coming year than in either of the two past.

During my administration of affairs here there has been issued to all on the reservation, men, women, and children, five pounds of flour each week, besides vegetables and meat, as the supply on hand would permit. To Indians at work additional rations have been given of flour, beef, and vegetables, with occasionally a small ration of tea, coffee, and sugar, of which three last named the Indians are extravagantly fond.

The presence of troops in the immediate vicinity of the reservation is a great evil, and a hinderance to the advancement of the Indians. The teachings of the agent are neutralized by the conduct of individual soldiers. Some Indians acquiesce in the debauchery of their women for the profit it brings, while others struggle against it, and lament the demoralization consequent upon the proximity of troops. There can be no doubt but the prosperity of the reservation would be much enhanced were there no white men within its boundaries other than those employed by the Indian Department.

So far as the management of the Indians on the reservation is concerned, no troops are required, or not more than a small detachment of

selected men. To hold in check the various tribes in this section, a military force will probably be necessary for several years, but it should be stationed some miles from the reservation or other Indian settlement. A military post a day's march from the reservation, and visiting to and fro prohibited, would exert a far greater influence over the Indians than one constantly in their sight, and where the men, when off duty, mingle with them. What I desire to suggest is that it would be to the benefit of this reservation were the military post ten or fifteen miles away. Of such paramount importance do I consider the separation of Indians and troops that I do not hesitate to express the belief that it would be good policy, if found necessary in order that the change be effected, that the Indian Department purchase at a fair valuation the fixed property at Camp Gaston. To this subject I respectfully but most earnestly invite the attention of the Commissioner.

The situation of the Indians of the Lower Klamath River, by far the most numerous and important tribe in this vicinity, demands notice.

In 1853 the Klamath reservation was established, extending from the mouth of the river up about twenty miles, and to within about that distance of this place. That reservation was in successful operation seven or eight years, when it was abandoned for some rented land in Smith River Valley, to which place were removed a few Indians that had been gathered to the Klamath reservation, but none of the original inhabitants. The Lower Klamaths born and living within the boundaries of the Klamath reservation at the time it was occupied as such numbered about 3,000; probably a census at the present time would show considerable diminution. The condition of these Indians in the last ten years has been worse than if they had never been under the fostering hand of the Government. It is true they had an opportunity to go to the Smith River agency when the Klamath reservation was broken up, or could, at any time of late years, have come here; but the love of the Indian for the home of his fathers is so strong that he will seldom leave it for any prospect of good that may be held out to him. Nor do I think that any particular pains has been taken to induce the Klamaths to remove, neither is it certain that their removal to this reservation, all things considered, would be a benefit to them.

These Indians have made but little effort to continue cultivating the soil, as they were doing when the Klamath reservation was in operation, and have fallen back to rely upon the natural resources of the country, or seek to gratify their desires for better food and clothing by performing occasional jobs of labor for white people, and disreputable practices. There is much sickness among them, chiefly venereal. The medical officer here informs me that by far the largest portion of the medicines he dispenses is to the Lower Klamath Indians.

Though formidable as enemies, the Lower Klamaths, as a rule, are, and have been for several years past, on friendly terms with the white inhabitants on either side of them, and desirous of instruction and assistance toward civilization.

I respectfully recommend that the old Klamath reservation be made a dependency of this, to the extent at least of a sub-agent, who shall be able to dispense medicines under instructions from the physician here, one assistant, and a supply of tools, farming implements, and seeds. The soil and climate on the Klamath near the coast are admirably adapted to the growing of potatoes, carrots, cabbages, &c., and there is sufficient land lying waste to raise all that the Indians living there could use for food, as also a surplus to exchange for articles that grow to ad-

vantage in this valley, where esculent roots are very uncertain and never prolific.

I remain, sir, very respectfully, your obedient servant,

S. G. WHIPPLE,

*Captain First Cavalry, U. S. A., late Acting Indian Agent.*

Hon. E. S. PARKER,

*Commissioner of Indian Affairs, Washington.*

No. 22.

HOOPA VALLEY INDIAN RESERVATION,

*August 31, 1871.*

SIR: In compliance with your request, I have the honor to submit the following brief report relative to the school under my charge:

My school has been in session three months. I began with five scholars, but the number has increased to twenty-five, with an average attendance of twelve. As the feuds existing among the several tribes prevent them from mixing, these, for the most part, belong to the Si-aha tribe, which is located nearest the school-house; however, lately, several have come in from the "Hostler" and Matilden ranches. Their ages average from eight to fifteen years; all are docile, and, with few exceptions, seem anxious to learn. I am surprised at their readiness in learning. When I commenced teaching, none knew the alphabet; now all have learned it and several can read quite readily in words of three and four letters. Counting, making figures, and printing form part of their daily exercises, and for the latter they display a decided taste.

Irregularity in attendance is here, as in many schools for whites, a prevailing evil, which I hope may be at least partially overcome during the year.

Very respectfully, yours, &c.,

ADA M. WELLS, *Teacher.*

D. H. LOWRY,

*Indian Agent, Hoopa Valley Reservation.*

No. 23.

ROUND VALLEY RESERVATION, CALIFORNIA,

*September 7, 1871.*

SIR: In accordance with my instructions, I submit the following as my first annual report of the condition of the Indian service on this reservation:

When I entered on my duties as agent, on the 1st of April last, no count was taken of the Indians. By an enumeration, made for this report, I find that there are 793 Indians on the reservation, classified as follows:

| Tribes.          | Men. | Women. | Boys. | Girls. | Total. |
|------------------|------|--------|-------|--------|--------|
| Ukies.....       | 123  | 128    | 27    | 27     | 305    |
| Concows.....     | 61   | 79     | 19    | 19     | 178    |
| Pitt Rivers..... | 42   | 51     | 13    | 14     | 120    |
| Wylackies.....   | 45   | 52     | 3     | 7      | 107    |
| Red Woods.....   | 35   | 38     | 5     | 5      | 83     |
| Total.....       | 306  | 348    | 67    | 72     | 793    |

Besides these, it has been rumored among some of the Concow Indians that over 200 Sacramento Valley Indians are making preparations to come voluntarily upon the reservation in a short time. It seems that the Indians are becoming more convinced that it is to their interest to be upon the reservation, as all of those here appear to be satisfied to remain, and several outsiders have lately come in. Considering their habits and modes of living, their general health must be regarded as good. The causes of sickness among them are, with few exceptions, of a pulmonary and venereal character. To their carelessness of exposure and the mingling with them of the very lowest grade of white men must be attributed nearly all the sickness among them. The physician has experienced no little difficulty in treating the sick, in consequence of their frequent preference for native doctors, who use a species of incantations. I am happy to say, however, that this practice shows signs of decrease, and that some of the doctors themselves acknowledge the superior efficacy of "white man's medicine." If their intercourse with the white men surrounding them could be prevented, much more might be done to improve their sanitary condition, but owing to public sentiment, and the low state of morals in the surrounding community, it is a moral impossibility to obtain the conviction and punishment of a white man for any offense against the Indian Department. This was proven to me shortly after I came here, when a man whom I had had arrested was cleared, although positive proof of trespass of the most aggravated character was introduced against him. Accordingly, I have since, as far as possible, prevented such acts without resort to legal process, well aware that any such attempt would prove useless.

As far as I can learn, no school for the education of Indian children had ever been attempted on this reservation until the past summer. In the latter part of June Mrs. Gibson commenced the experiment, which has thus far proved successful beyond our expectation. During the most busy season of the year the number of scholars has constantly increased, until at present there are more in attendance than can well be taught by one teacher. They evince both ability and disposition to learn, although their education has been generally conceded to be an impossibility. So far the school has been conducted in the open air, but the approach of the inclement season renders necessary the erection of a suitable building. The school-house at one time reported is the upper story of a log house, and is low, small, without a window, with but one door, and utterly unfit for school purposes. It is now used as a store-house for agricultural tools.

I inclose tables showing the agricultural products of the reservation. These do not include the corn and vegetables raised by the Indians as a private undertaking. In the spring I placed oxen, plows, garden tools, and seeds at the disposal of such as wished to cultivate gardens for themselves. Several availed themselves of the opportunity, and planted between 25 and 30 acres. They seem much pleased with the result of their industry, and will probably cultivate considerably more next season.

Some improvements have been made during the spring and summer. A new store-house, 44 by 26 feet, has been erected, which, it is thought, will conveniently contain the annual supplies of clothing, groceries, &c. A barn, 30 by 60 feet, with sheds on each side 14 by 60 feet, will soon be completed. Several other new buildings are an imperative necessity, among which is an agency. Several buildings have received repairs. The saw and grist mill is being prepared and improved while the water is low and but little or no work is being done. During the season of

high water the mill, when not grinding and sawing for the reservation, is always profitably employed in grinding for settlers, and sawing lumber, which always commands a ready sale. If an assistant miller were employed during this period to run the mill a portion of the night, a considerable sum over and above his wages could be realized by the Department.

Last May I entered into a contract to furnish Lieutenant J. H. Hurst, acting assistant quartermaster at Camp Wright, with forage for the year ending June 30, 1872, at the following rates: barley or oats, 1½ cents per pound; hay, \$10 per ton; straw, \$8 per ton; being a fair market price for each article. In the discharge of my duties my action has been constantly impeded by a matter which will continue an effectual barrier in the way of any progress of the reservation unless soon attended to. The land occupied as a reservation, instead of covering the entire valley, as originally set forth, has been encroached upon by settlers, until it is now comprised in a few thousand acres at the extreme northern end of the valley, and the undisturbed possession of even this is not allowed us. It is my opinion that this reservation is now doing as well as it ever will unless it is given more room, with limits distinctly defined. At this time it would be very difficult to obtain possession of the entire valley, and my observation leads me to the conclusion that the most feasible plan to settle the matter is to take as the southern boundary of the reservation the northern line of township No. —, extended to the North Fork of Eel River, on either side; as eastern and western limits, the North Fork of Eel River, just referred to; as the northern boundary, an east and west line placed as far north as might be considered expedient or desirable. The improvements made by settlers upon this tract are not numerous, and, with few exceptions, are merely nominal.

Several important objects would be attained in this way:

1. The most prominent is a range for the reservation cattle, which are in great danger of starvation during the coming winter, as sheep have been herded this season over the country heretofore occupied to a great extent by reservation cattle.

2. In the valley a sufficient quantity of land for farming and for pasturing horses and work-cattle would be secured.

3. The reservation would be rid of a certain class of neighbors who, occupying the position they do, possess powers of annoyance and injury, which they seldom fail to exert upon the slightest pretext.

4. The timber on this land would be amply sufficient to supply all the saw-logs, rails, and fire-wood needed.

I have previously called your attention to this matter in a monthly report, and hope I may not be considered intrusive in again reverting to it. It is a duty, in which I take pleasure, to commend the employés for the faithful discharge of their duties.

Please find inclosed the teacher's report.

I am, very respectfully, your obedient servant,

HUGH GIBSON,  
*Indian Agent.*

Hon. E. S. PARKER,  
*Commissioner Indian Affairs, Washington.*

## No. 24.

ROUND VALLEY RESERVATION, CALIFORNIA,  
*September 6, 1871.*

SIR: I would respectfully submit the following as a report of the school under my charge:

The school was opened on the 26th of June, and has continued since that time, holding a session every day except Sundays. Previously to that time no school had ever been attempted, if I am correctly informed. The prevailing impression was that the Indians were incapable of learning, but, not wishing to give the matter up without an effort, I started the school as an experiment, which has thus far succeeded beyond my anticipations. Some difficulty was at first experienced in inducing the children to attend. The stealing of Indian children was no rare occurrence in this valley a few years ago, and the parents seemed to dread some decoy, when their children were invited to come, but since they have comprehended my intentions they are very anxious that their children should be regular attendants.

I had no trouble in classifying my school, as all were in blissful ignorance of the alphabet; but although their knowledge of the English language is very limited indeed, their advancement has been quite rapid. Several are now able to master the easy reading lessons.

The number of scholars has increased steadily, and they all manifest a strong desire to learn. The number now on the roll is 102, classified as follows: Ukies, males, 11, females, 22; Concows, males, 14, females, 15; Pitt Rivers, males, 14, females, 18; Redwoods, males, 3, females, 5.

In consequence of the busy season the attendance has been quite irregular, averaging only 45. Sixty is the largest attendance recorded. Although they are crowded together on seats in the shade outdoors, their deportment and attention have been remarkably good. The object method has of necessity been in constant use, and has proved very useful, especially with those entirely unacquainted with our language.

A very strange (to them) idea was that of washing and combing, which have been required of them, but not only have they become reconciled to the custom, but they seem to enjoy their ablutions preparatory to school exercise.

To enable them to present a neat appearance, as well as to secure regular attendance, some clothing and dry-goods have been distributed among them with satisfactory results.

I hope that your efforts to provide a school-building before the rainy season sets in may prove successful, as it is certainly very important that the school should not be dismissed during the winter months, to leave the children to lapse again into ignorance.

Very respectfully, yours,

MARY A. GIBSON,  
*Teacher.*

HUGH GIBSON, Esq.,  
*Indian Agent, Round Valley Reservation.*

---

No. 25.

INDIAN AFFAIRS, CALIFORNIA,  
*Office Indian Agent, Tule River Reservation, September 1, 1871.*

SIR: I have the honor to submit the following annual report of the Indian service at this agency for the period intervening between March

24th ultimo, at the date when I assumed charge, and the 1st of September instant.

The tribes of Indians at the agency are the Tules and Tejons, numbering, on the 26th of March last, men, women, and children, 374. Since that date rations have been issued to from 303 to 386 Indians, an average of 341. During the summer months, a large number of Indians are employed in harvesting, herding, and shearing sheep for the citizens in the vicinity of the agency. They are allowed, when not employed on the reservation, to labor for others, they receiving the compensation for their services, which they generally expend for clothing for themselves and their families.

The condition of the Indians is materially improving; many of them are becoming quite proficient in all kinds of farm work, and perform all labor required of them readily and cheerfully. They take an interest in cultivating lands on their own account; and this desire has been encouraged by the agent, the present season, by giving to each a piece of land for cultivation in corn and vegetables. Their work has been generally on their gardens performed efficiently and properly.

Since I assumed the charge of the agency the Indians have been orderly, obedient, and well disposed. No trouble has occurred between the Indians on the reservation and the citizens, and the only obstacle to good order, peace, and quiet is the facilities afforded the Indians in obtaining spirituous liquors, for which quite a number have a desire, and habits formed which they will gratify whenever opportunity offers.

There is in the vicinity of this agency, "as of all others," unprincipled white men and many Mexicans, who embrace every opportunity to sell and furnish the Indians whisky, and in almost every case it has been impossible to convict the offending parties; and it is from the effects and results of this traffic that former troubles have resulted, and the apprehensions and fears of the citizens of like difficulties are apprehended. Could this traffic be prevented, there could not be found a more orderly and well-disposed body of Indians in any locality.

There is located in this county, distant from twenty to forty miles, Wichumnies, Coweas, and Yokas, remnants of tribes, numbering, probably, 500. Quite a number of them obtain employment from the citizens in their vicinity, and obtain a comfortable subsistence, while the young and old suffer for the bare subsistence necessary to sustain life. Their former means of subsistence—game, fish, acorns, and grass seeds—are not to be obtained. Those helpless and dependent wards of the Government should be provided with homes on the reservation.

The land at this agency, suitable for cultivation, is the upland, mostly Government land, and the low-land or river-bottoms on the rented farm. The upland sown in grain by my predecessor was an entire failure, on account of early pasturage and the extreme drought.

The river-bottom in cultivation, 120 acres, 50 acres of which was not sown, but left, by my predecessor, for a volunteer crop, which was a failure for wheat, producing a crop of clover and wild oats, which was cut for hay. Forty acres were harvested, wheat producing 516 bushels. Thirty acres have been planted in corn and beans. The corn looks well; the bean crop is a failure, it being so situated that it could not be irrigated.

The products of the reservation, so far as harvested and estimated, are:

|                                               | Value-   |
|-----------------------------------------------|----------|
| Wheat, 516 bushels.....                       | \$1, 295 |
| Corn, (estimated,) 600 bushels.....           | 1, 200   |
| Potatoes, sweet, (estimated,) 60 bushels..... | 52       |
| Hay, 45 tons.....                             | 900      |

|                                | Value.             |
|--------------------------------|--------------------|
| Peas, 1,500 pounds.....        | \$45               |
| Beans, 600 pounds.....         | 30                 |
| Grapes, 1,800 pounds.....      | 54                 |
| Peaches, 4,000 pounds.....     | 120                |
| Pumpkins, 2,000 pounds.....    | 40                 |
| Water-melons, number, 500..... | 50                 |
|                                | <hr/> 3, 826 <hr/> |

The excessive drought that has prevailed in this part of the State for the last two years has caused the failure of all crops sown except, those irrigated.

No permanent improvements have been made on the reservation since I assumed charge. Two miles of brush fence have been rebuilt, with almost daily repairs, and notwithstanding every effort, it has been impossible to prevent the inroads of stock with fences of this kind. The employés, when not engaged in harvesting, planting, and irrigating the growing crops, have been engaged in fencing and repairs of fences, which has been only of temporary benefit and of no permanent value; and the material of this kind of fencing has become so far exhausted that resort to other materials must be had if farming is successfully prosecuted.

Forty-eight head of Government horses and mules have been driven to the mountains, forty miles distant, for pasturage. All of the mules, except one, are from fifteen to twenty-five years old, and the most of them entirely worthless for service, and many of the horses are in the same condition. Three of the Government wagons are worn out, unfit for service.

The buildings at the agency are agent's quarters, large, adobe houses, five rooms unfinished, adobe store-house, 2 frame granaries, 2 employés' houses, adobe; 1 store-room; 1 harness-room; and 1 blacksmith-shop, all adobe, and 1 large shed, 36 feet square. The Indians have 8 adobe and 15 frame houses.

Number of deaths on the reservation, 9; births, 3. The present sanitary condition of the Indians is better than usual at this season of the year.

The Indian school, which was opened on the 16th of May ultimo and continued until 11th August ultimo, was then discontinued by the illness of the teacher, Flora J. Saxe, who at that date resigned. The average attendance was 25; the advancement and progress of the pupils were good, and their deportment very satisfactory. It is proposed to continue the school as soon as the services of a teacher can be obtained.

Moral and religious instruction has been imparted to the Indians by the ministers of the Methodist Episcopal Church with results beneficial and encouraging for continued labors. The Indians have manifested much interest, and the good order and deportment has been very commendable.

The late instructions requiring employés to furnish their own subsistence, except such as is raised on the reservation, has been the cause of some resigning their appointments.

Sixty dollars per month in currency leave but a small margin when flour is 8 cents and beef 10½ cents per pound. It is difficult to obtain the services of moral, reliable, and efficient employés at such inadequate compensation for services.

Very respectfully, your obedient servant,

CHARLES MALTBY, *Agent.*

Hon. E. S. PARKER,

*Commissioner Indian Affairs, Washington, D. C.*

## No. 26.

TULE RIVER AGENCY, *June 30, 1871.*

SIR: I have the honor to submit the following report as school teacher:

I commenced teaching the 16th of May, and have held school regular ever since. For the first ten days in May there was an average attendance of 35 and 40 scholars; since that time the average has been about 25. As they have so little encouragement and influence from their parents, they do not attend so regularly as I could wish for their own advancement; but when they are in school they appear to take an interest in their studies and manifest a desire to learn. With two or three exceptions, they all had to begin with the alphabet. They have now all learned their letters, and about 12 or 14 are commencing to read. They also write words of four and five letters very correctly. Thus far I have been obliged to confine myself to reading and writing, but if they continue to progress as they have done, I shall commence other branches soon.

I have found them very obedient and attentive, and I think they have done as well as the same number of white children placed in the same circumstances.

I find they understand most of the English language, but the girls particularly are very backward about speaking it. But I hope time and patience will overcome this difficulty.

FLORA J. SAXE, *Teacher.*

CHARLES MALTBY, Esq.,  
*Agent Tule River Agency.*

---

 No. 27.

OFFICE MISSION INDIAN AGENCY,  
SAN PASQUAL RESERVATION,  
*San Diego County, California, February 20, 1871.*

SIR: I have the honor to submit the following report of a tour of inspection made to the different bands of Indians embraced within the limits of the Mission agency, commencing on the 10th and ending on the 23d of January last.

I would state that the tour was made in order to find out what the Indians were doing in the way of planting and sowing crops for the next season, to ascertain if any change had taken place in their feelings in reference to locating on the Government reserves, and to learn any other facts of interest which might possibly have a bearing on the future welfare and prosperity of these people.

San Pasqual Rancheria, on reservation of same name, numbers in all 200 persons. This includes men, women, and children of all ages and sexes. In consequence of the drought prevailing in the county the Indians have not sown any wheat or barley, but they are making preparations to plant corn; have opened ditches and will irrigate the soil as soon as the San Bernardo River has a flow of water.

The Indians complained that a settler named Peter Abel had fenced in the upper part of the valley, and would not allow them to cut fencing-poles, &c. They also asked the agent when would the Government compel the settlers to leave the reservation?

I found the practice of selling young girls to white men prevailed to an alarming extent at this rancheria, so much so that it is almost

impossible for an Indian to get a wife, unless he takes one at second-hand.

As regards the settlers, most of them have squatted on the lands since the recommendations made in 1867 and 1868 by the Hon. B. C. Whiting, superintendent of Indian affairs, that San Pasqual be set apart as a reservation; some of them located in the valley to trade and sell liquor to Indians, others expecting to be bought off by the Government, and but very few, if any, to make permanent homes.

General McIntosh, superintendent of Indian affairs, reported August 25, 1869, the following-named persons as squatters in San Pasqual: Peter Abel, John Moore, Juan Ossuna, Juan Diego Ossuna, Daniel Kinester, Estaven Soto, Jose Juan, Jesus Morania, Moses Manasses, Jose Morania, Domecio Espinosa, Juan Minto, Lebrado Silva, and Roswell Trask.

Of the above John Moore, Juan Ossuna, Jesus Morania, Jose Morania, and Roswell Trask left prior to the promulgation of the President's order, declaring San Pasqual a reservation. Jose Juan and Juan Minto left some months since.

Outside of the valley and in the township embraced in the reservation are located the following persons, viz: Asher Maxey, William Ingraham, Enos Mendenhall, Andrew Montgomery, James Cassidy and Frank Raetzky, the last three occupying the same house and working the same land. James M. Lovett may possibly be on the reserve, but it will require a survey to determine the question. There are also on the lands a number of migratory Sonorians.

Pala rancharia, on reservation of same name, numbers in all 150 persons. They have sown in wheat and barley about 60 or 70 acres of land, and are making preparations to plant corn, melons, &c. They are under the immediate supervision of Manuelito Cota, head chief of the Mission Indians, and are doing well, which may be attributed in a measure to the good counsel and example of their excellent chief, but more particularly to the fact that Pala is quite isolated from the routes traveled by the whites.

Manuelito complains that he is virtually a prisoner in Pala; that his life is in danger from the party acknowledging Oligario as their chief. He inquires, when will the Government take decisive measures toward placing Pala reservation in working order? And also to afford protection for his life and property. He further states there are a number of Indians desirous of locating at Pala, but are deterred from doing so through fear of Oligario.

I would respectfully state that I have made several reports in reference to this Oligario, with recommendations attached thereto. At the time Pala was declared a reservation the following-named citizens of the United States were located thereon: Antoine Réche, Vitel C. Réche, Sylvester Gomez, Phillipi Sares, Jose Ossuna, Derroughta Correilla, and Lucio Castro; of the above all have left with the exception of Ossuna, Gomez, and Castro. Ossuna is a very old man, living in a brush-house and cultivating a small piece of land. Castro squatted on the place he now occupies within the last two years, (on ground formerly used by Indians for planting purposes,) and has, in defiance of positive orders, built a new house within the last few months.

In relation to Gomez, I would invite attention to the following extract from a letter to the superintendent of census, dated from this office August 25, 1870:

Sylvester Gomez lives with an Indian woman named Viviana Ochuck, and has two children by her named Cenovia and Ramon Gomez; after the birth of the children,

Gomez went to San Juan, and married a woman of that place; after an absence of seven years he returned to the Indian woman and children. It is said the improvements at Pala are mainly due to the exertions of Viviana Ochuck and children. I place this evidence on record, that the claims of Viviana Ochuck and children may have due consideration as regards the property along with the claim of the wife, in case of the death of Gomez, as he is now in very feeble health and cannot last long. I am thus particular in my remarks, as it appears to be claimed among the settlers that the Government will pay them for their improvements.

In my opinion, the only settler entitled to consideration is Philippi Sares, a naturalized Frenchman, who settled in Pala some ten years ago. He is an industrious man and a good citizen. He built a substantial adobe house, fenced in thirty or forty acres of land, planted a vineyard of about 1,500 vines, worked hard, and took care of his family. Sares came to the agency and said he wished to obey the laws, and would leave, but if the reservation order was revoked he felt assured the Government would take measures to have his house and lands restored to him.

Pauma rancharia numbers in all 67 persons; in 1865 there were 106. It is located on Pauma grant, owned by José Antonio Serrano and others. The Indians have sown about twenty acres in wheat and barley, but the chances are they will make no crops. Pauma ranch adjoins Pala reservation. The Indians of Pauma are neutral in their preference between Manuelita Cota and Oligario; still they think the reservation a good thing, and in case they are compelled to leave the ranch land they would like to go there. For many years there have been difficulties between the Indians and the owners of the grant, and in the year 1857 or 1858 a certain portion of the ranch was set apart for the use of the Indians by Louis A. Rowen, justice of the peace of Temecula township, the justice acting under California law, article 2642, section 2, act of April, 1850, for the government and protection of Indians; which act states that, when land is thus set apart, "the Indians shall be permitted to remain thereon until otherwise provided for," or words to that effect. Now that the United States Government has provided for the Indians, the question may be brought before the agent, have not the owners of grants the right to compel the Indians to move from their lands?

Temecula rancharia numbers 237 persons; at the time the agent took the census in 1870 it numbered 252; the difference is accounted for by the gain at Pala reservation. In 1865 the rancharia numbered 382; in 1860, 525; in 1850, 600 or 700; at this latter date they had numerous herds of cattle, and raised abundance of grain, and to spare, for sale to emigrants. Now they pick up a precarious subsistence, and many of them are on the verge of starvation. This rancharia is located on Temecula grant, and is immediately situated on the old overland and Government road to Fort Yuma, which fact will account, without any comment, for the rapid decrease in its population. A few of the industrious Indians have sown about 60 or 70 acres in wheat and barley, and as there are facilities for irrigating the land from Temecula Creek, the chances for a crop are good.

There is difficulty between the grant owners and the Indians concerning the land. About the year 1849 most of the Indians were located on what is now known as the Chino Ranch, near Los Angeles. They moved in a body to Temecula Valley, and along about 1856 Juan Muchado, justice of the peace for Temecula Township, under the law of 1850, set apart a portion of the valley for the use of the Indians.

At the present time the resident agent in charge of the grant requests the Indians to confine themselves to the land set apart for their use. This the Indians refuse to do, claiming that the whole valley belongs to

them, and therefore the right to settle in any part thereof. On the 18th of January I proposed to José Antonio Champkin, the captain, to hold a council in order to learn their feelings in regard to the Pala reservation, and also for them to state to me, as their agent, what were the difficulties with the agent of the grant. Champkin positively refused to call his people together. It is as well for me to mention that Champkin is in full accord with Oligario, who heads the party opposed to the reservations, and that the former well-known Captain Jeronimo has moved, with his family, to Pala.

On the 19th instant, the agent being seriously indisposed, occasioned by the hardships incident to the trip, started for San Pasqual, via Auenga and San Pasqual.

Auenga reservation is on the public domain, in close proximity to the Fort Yuma road, and in the immediate vicinity to the well-known Dutchman's ranch. It numbers 33 persons. They have not planted, because they have no agricultural land other than 5 or 6 acres, which is already taken up with their vines and fig-trees.

Mr. Benjamin Bergman, the proprietor of the Dutchman's ranch, complains that the rancheria is a refuge for Indian cattle-thieves; that he knows of his own knowledge the Indians are killing Muchado's stock, and thinks when that source of supply is exhausted they will commence on his cattle.

The agent is satisfied that Auenga has been for years a nest for thieving Indians, and had occasion, some time since, to use his authority to compel the Toceval family to move therefrom. (For the history of this family see report January 31, 1870.)

San Ysabel rancheria numbers 146 persons, and is located on ranch of the same name owned by Captain Wilcox, of San Diego. They have not planted or sown, and are very poor, living mostly on acorns. In former years they had some vineyards and peach-orchards, but now only few vines and trees remain. They are fearfully demoralized, which condition can easily be accounted for, as the rancheria is only about seven miles from the Julian mines.

I have the honor to submit the following conclusions, viz:

The Indians have done very little in the way of planting and sowing for the next season's crops, and the probability is they will soon be in a starving condition. When they arrive at this state they will commence killing stray cattle, which will lead to a war between them and the whites, with the usual result to the Indians.

I find that their feelings in reference to locating on the reservation have improved but very slightly, and will state that nothing effectually can be done by the agent toward getting the Indians to locate until the settlers have been moved therefrom.

I would most respectfully call the attention of the Department to the monstrous practice of depraved white men buying young Indian girls, and that speedy action be taken in the matter.

Experience shows that the two races cannot live together or in close proximity and prosper, and the Indian invariably gets the worst of it. The difference between Pala and Temecula rancherias is instructive, more particularly as they belong to the same tribe of Indians. At Pala, which is comparatively isolated, they hold their own and are doing well, while at Temecula, which is on the highway, they are lazy and thriftless, and, as will be seen by the statistics, are rapidly dying out.

If it is the earnest desire of the Government that these Indians should be advanced in agricultural pursuits and the arts of civilized life, I would state that, in my opinion, the only way it can be accomplished is

by getting them on the reservation provided for their use, where they will be removed from the pernicious influences and bad advice of designing white men, and would therefore recommend that the settlers be removed forthwith, and the Indians be brought in as soon as practicable.

I am, sir, very respectfully, your obedient servant,

AUGUSTUS P. GREENE,

*First Lieutenant, U. S. A., Special Indian Agent.*

Hon. B. C. WHITING,

*Superintendent Indian Affairs, California,  
San Francisco, California.*

---

No. 28.

INDIAN AFFAIRS, CALIFORNIA,

*Office Indian Agent, San Pasqual Reservation, April—, 1871.*

SIR: I have the honor to make my first monthly and final report.

Hearing of disloyalty and threats of violence in Pala, I went on the 20th of March to investigate the matter. I found the reports true, and fear there will yet be trouble in Pala.

In my travels among the Indians, since my special report, I find the destitution much greater than anticipated in that report. I find also much dissatisfaction among intelligent and reliable men of the county with the Government, for their recent action in abolishing this reservation, by which the Indians are unprovided for, and necessarily turned loose upon the country to steal and rob, or starve. As the whites who are now among them are killing their cattle, and driving them from their arable lands, which they have had peaceable possession of for thirty years or more, men who are in sympathy with the Government exceedingly regret that the Administration should be so influenced by such gross misrepresentations, for that which was represented as strengthening the Union element in these counties has only weakened it. It is now largely democratic. Whatever influences may have been brought to bear in the interests of any party or parties, whether those desiring the lands segregated for Indian purposes, or those hirelings of disloyal men, a public wrong has been done by which blame is attached to the Administration by a most foul deception practiced upon our Representatives in Congress.

I now repeat what I referred to in my special report—that if the Government intend to do anything for the Mission Indians, now that they have abolished this reservation, it will cost them more money to purchase lands for them than would have been necessary to make San Pasqual self-supporting.

I would earnestly recommend that this matter be investigated before the lands are ordered surveyed, or further improvements made upon them by the settlers. From the most reliable information, I am confident that there was not a white family living on these lands at the time they were segregated for Indian purposes, and there are none but squaw men living on them up to date, except in Pala Valley. I am informed that these men (cannot say as to families) have come upon them within the year under protest of Government.

I feel confident that \$2,000 would have been the outside limit of the value of all the improvements which were on these lands at the time they were set apart for Indian purposes.

Pursuant to instructions, I have closed up the business of this agency, and herewith send an account of all funds belonging to the Government, together with an invoice of property yet unsold.

JOHN R. TANSEY,

*United States Special Indian Agent, Mission Indians, California.*

Hon. E. S. PARKER,

*Commissioner Indian Affairs.*

---

## ARIZONA SUPERINTENDENCY.

No. 29.

OFFICE SUPERINTENDENT INDIAN AFFAIRS,  
*Arizona Territory, Arizona City, August 22, 1871.*

SIR: The period having arrived wherein it becomes necessary to make annual report, I have the honor to submit the following:

I assumed the duties of superintendent for this Territory on the 13th March, 1871, less than six months ago, and consequently am not so well prepared to treat upon the Indian question as I could desire; nevertheless I shall lay before the Department my views as gained by this limited experience.

I found the office turned over to me in point of systematic record complete in all particulars; and I am not a little indebted to my predecessor for the carefulness shown in its management, thereby saving me a good deal of unnecessary trouble.

The general condition of the Indians has not materially changed since the last annual report, save that the number of hostile ones have diminished in their unremitting warfare. Their transactions for the year may be reckoned as more bold and successful than at any former period, and, as a corresponding consequence, the loss of life and property among settlers has been greater. To such extremes had they been pushed that a secret organization resulted, and, well concealing their plans, left Tucson and vicinity for Camp Grant, where at the time quite a number of Indians were supposed to be receiving from the post rations and assistance, under the pretense of being peaceably inclined. Whatever may have been their condition, they were found by the party from Tucson, and a slaughter ensued, involving the death of some eighty to one hundred Indians of both sexes. In this camp was found evidence of recent robbery and murder; but whether committed by those Indians or not has yet to be determined. The military part of the Government having this matter in charge will, it is presumed, fully investigate it. It is lamentable to reflect upon the causes which have led to this fatal effect, and it is sincerely to be hoped that a similar transaction may never again occur or even be contemplated. There appears but one course to pursue with the Apache, and that is to unequivocally conquer him, and then he can be handled with less restrictive measures. Such I deem to be the policy of the Government; and it would not be inapt in this connection to suggestively ask if those societies in the east who are yearly expending immense sums in furnishing missionary labor and light to the heathen abroad could not be induced to look about among our Indian heathen, and, by permitting them to partake of some of the lavish generosity bestowed upon others, assist in relieving the Government of a deal of embarrassment as well as expense?

## THE COLORADO RIVER RESERVATION.

Shortly after my arrival here I visited this reserve, and though the time and circumstances were not as favorable altogether as could be desired, I saw enough to satisfy me that the reserve had not been a success—not that the agent had been neglectful, but arising from causes that appear to have commenced when the reserve was originally located. Still, I am not aware of any better place on the river for the purposes to which it is dedicated, and therefore advised that the work on the irrigating canal should be prosecuted as recommended by Mr. C. E. Krauss, civil mining engineer, as per specifications and plans forwarded by me to the Department. In order to accomplish this a special appropriation will be required of Congress, and I trust that a proper attempt will be made in this direction at its first sitting.

A constant, living supply of water upon the reserve will be competent for all now there, and such as may hereafter be induced to settle; but in a country like this, where the soil is sandy, the heat intense during one half of the year, and evaporation so active, it will require intelligent management in its distribution to accomplish all that is expected.

The desirable land on this reserve for purposes of cultivation does not lie in a contiguous body, but in patches of greater or less area, and at distances of miles apart. It would appear, therefore, that the greatest care should be exercised in the handling of this canal and the distribution of the water, and as I did not see that the limited amount at my command which could be diverted for this purpose would accomplish an adequate good, I refrained altogether from expending money upon it. Whatever may be done hereafter by Congress should be done promptly and without delay, for, in the end, it will be far less expensive to furnish permanent water than to subsist the Indians and furnish them annuities. The annuity policy with the Indians of this Territory is simply a plague, and the quicker that liberal and energetic action is bestowed to render them self-sustaining, so much the better in reality for them as well as the Government. They are naturally lazy and worthless, as seen from our stand-point, and anything which adds to this condition, no matter how produced, only makes it worse and less easily managed.

No coalition has yet taken place between the divided houses of the Mohaves. That portion under Sic-a-hoot, at Yreteba Slough, finding themselves cut off from supplies of all kinds, may think it best to waive their views and come to the reserve. Still, I am of the opinion that they are better off where they are, and, under the direction of a sub-agent, could be made comfortable and contented. I have already recommended this proposition, and find no present cause to change my views upon the subject.

The agency building requires extensive repairs in order to render it habitable to the employés. But little can be diverted for this purpose, and only patching can be done to preserve the property. As far as this is practicable, it will receive proper attention.

The sanitary condition of the Mohaves is deplorable, and calls for different treatment than heretofore. Syphilitic diseases find pregnant ground among these poor creatures, and even after treatment they manifest a perfect abandon, which neutralizes its efficacy, and from that they run to indifference and decay. It would be almost impossible for the resident physician to get about the length and breadth of his reserve daily, to see his patients and watch their progress. They come to him from long distances, retire in want and pain, and it is not surprising that many fail to return. I therefore recommend the establish-

ment of a proper hospital upon the reserve, where all the sick can come for treatment, and remain until pronounced convalescent; that means be appropriated for its management, to cover everything necessary to render it thoroughly effective.

The subject of teaching the youth of the tribe, through the medium of a properly organized school, is one of the greatest importance. By this means they will be withdrawn for a time from the pernicious influence of the older ones, and if no result ensues immediately, beyond the acquisition of habits of cleanliness, a point will be gained in the right direction. With the persistent exertions of proper teachers, an interest can be awakened which in time will yield its fruit. Heretofore, in my monthly reports, I have suggested that competent persons should be selected to serve as interpreters to the different tribes; that they be provided for at the different reserves with all things necessary to acquire the different languages, and reduce them to a system for educational purposes; that the persons selected should be of superior intelligence, and when they shall have arrived at the point of usefulness, that they receive adequate compensation for their services. At the present time there is only one teacher in the Territory employed by the Government, and much of his time has been devoted to the acquisition of the language of the tribes with whom he is associated. Perhaps it would not be necessary to create a distinct corps for interpreters, but the teachers could serve, in addition to their other duties, and a just premium for these exertions should be the salary that an interpreter alone might enjoy. It is neither a pleasing nor thankful task to occupy either of these positions, and to make them attractive a liberal salary (in the full sense of the word) should be established.

#### APACHE MOHAVES.

This tribe have vacillated between a desire to locate upon a reserve and otherwise. They are accused of having participated in several robberies and murders during the year, and little doubt remains as to the accusation being well founded. I am now engaged in preparations to meet their chiefs at the Colorado reserve, and regret that the result of the interview will not transpire in time to be embodied in this report.

#### YUMAS.

This tribe range in and about Arizona City. The Government of late years has given little or no attention to their condition. I have frequently invited their chief (Pascual) to visit me, but he has declined in every instance. The bulk of the tribe remain in their rancheros, and gain a substance by planting and cutting wood for the steamers plying on the Colorado River. The vagabonds of the tribe remain about the town, gaining a precarious living by menial services performed for the citizens, but principally relying upon the successful prostitution of their women to furnish them means to gratify their vicious propensities for gambling and drinking. They render themselves, however, amenable to the operation of civil law, and their excesses are punished in this manner. They will not go to the Colorado reserve, and are satisfied where they are.

#### PIMAS AND MARICOPAS.

These tribes move along in the same track of events and consequences as set forth in the last annual report. From time to time they have

been detected in the fact of stealing stock from citizens, and appropriating it to their own uses. A large number of reclamations have been made and the documentary evidence of claim transmitted to the Department at Washington. But one case has been referred back during my administration, and the instructions accompanying it were verified by the action of Agent Grossmann in bringing together the captains and demanding satisfaction. The satisfaction offered was a refusal to make good the demand. This procedure having accomplished the line of instruction, was transmitted to the Department. Again, comes a petition of the settlers on Salt River to Agent Stout, requesting him to remove the reserve Indians, who are encamped upon their claims, and engaged in destroying their crops. The Department is in possession of information of a similar character, applying to the last harvest season, and I deem it necessary to enlarge upon the subject.

While the Government manifests in every way a desire to care for and protect those Indians, it should compel them by force, if necessary, (and there appears no other way,) to remain upon their reserve, and let the settlers alone. Exhausted patience on the part of the settlers may produce a conflict, and, once commenced, it will end disastrously. Placing the question simply upon the ground of dollars and cents, the prevention will be far less expensive than the cure, and, upon the grounds of justice and humanity, it is too grave to admit of speculation.

Apart from the condition of affairs as above related, an interesting feature has arisen based upon an attempt to close up the establishments of certain illicit traders, and bring them within the scope of the law. Messrs. W. Richard & Co., H. Morgan & Co., and F. Larkin, upon and in close proximity to the reserve, had at one time been licensed traders. Upon application of the parties for renewal of license, causes existed within the knowledge of the agent to withhold such renewal; his actions were approved both by the superintendent and the Department at Washington; the parties were so informed; notwithstanding which they continued to trade, and never availed themselves of the right of appeal, as prescribed by the law "regulating the intercourse with the Indians," &c., but did set at defiance the law, the Government, and its authorized agents. Formal notice to desist from such trading was served upon each of the parties. This notice was totally disregarded, and orders were given to Agent Grossmann to make seizure of their property. This he did in the case of Richard & Co., then trading at the point known as Casa Blanca. Subsequent to the seizure the parties formed a combination, and when an attempt was made with Morgan and Larkin, they declared themselves ready to resist by force. The agent not being in a position to repel force by force, the seizure in these cases was not consummated. The property seized was taken into possession by Agent Grossmann, but such was the sympathy created among outside parties, and such the action of the officers of the law in consequence, that the property was replevined by a process issuing from a territorial court, and the efforts of the United States district attorney were unavailing to procure restitution. He has made a statement of the case to the United States Attorney General, and awaits instructions.

Having already communicated to the Department my views upon the subject, a repetition of them at this time would appear unnecessary; nevertheless, I consider the prompt action of the Department extremely important, as not only showing to traders generally in the country that the Indian law is alive and means something, but, also, to the Indians that the Government has power to force its mandates to citizens and

Indians alike, and preserve the scales of justice evenly balanced between them. I also deem the propriety of placing a full company upon each reserve as unquestionable, for nothing short of their presence at all times will enable the agents to fulfill the duties required of them by law.

#### SCHOOLS AND HOSPITALS.

My views in this connection will be found in the remarks applying to the Colorado River reserve, with the exception that a school has been in active operation at the Gila reserve for some months with the pleasing result of an average daily attendance of 38 pupils. I am not fully prepared to say whether a day or boarding school would be the most desirable. It will depend upon progress made, and sufficient time should elapse to test one system first. I am of the opinion that an industrial school, above all things, would be most desirable, where rough mechanics and practical farming could be taught. A hospital, however, is of every importance, and should be created. Syphilitic disease among the tribe is increasing, and it is far easier to give it a check now than it will be hereafter, when it shall have become chronic.

#### CROPS, ETC.

The crop of wheat this year has yielded somewhat in excess of the last, and the Indians now have at their command all the means required to render them well fed, well clothed, and contented. They have harvested sufficient barley to make return of nearly all the seed loaned to them last year, and, as far as crops are concerned, I have only one recommendation to make; that is, to furnish the reserve with a reaper and thrasher. It would be highly desirable; the Indians have seen it work at Salt River, among the settlers, and comprehend its advantages; it would enable them to harvest more per cent., realize earlier, and undoubtedly aid in extending the area of cultivation.

The proposed extension of the reserve, as intimately connected with the future welfare of these Indians, has my entire approval. The rapidly increasing settlements on the Upper Gila, with the continued increase of cultivated area, has made the question of supply of water paramount to almost every other consideration. By extending the reserve, the Indians are secured in their head of water; otherwise, they are subject to such contingencies as may be produced by scarcity and an unintelligent irrigating system above them. This waste (which is waste indeed) can never be benefited to any extent under their management, and this season proves the correctness of these suppositions, inasmuch as the usual second crop of corn will not be planted, while the settlers above, at or near Phoenix, have planted. Such has been the result of the water question this year that the Maricopas, who occupy the lower end and worst part of the reserve, have actually left and gone off some thirty miles, near Salt River, for the purpose of raising a crop; while the Pimas have been steadily moving toward the upper end. These circumstances indicate the natural desires of the Indians, and I can confirm them by personal intercourse and change of views upon the subject.

#### THE MOQUIS.

This tribe has never been brought in contact with this superintendency, though belonging to its jurisdiction. I believe they are under the

direct control of the Department, and have been informed that about \$5,000 of the appropriation made for Arizona will be required for that tribe.

#### THE PAPAGOS.

This tribe is scattered over a large area of country on both sides of the dividing line between the United States and Mexico.

Since my arrival here Dr. R. A. Wilbur has been assigned to duty as temporary agent, with headquarters at Tucson. He is now on a visit to the different branches of the tribe, and I fear that his report may not reach in time to be embraced in mine. The object of the Government appears to be to ascertain if they are willing to settle upon a reserve. When it is considered that a large portion of this tribe have been Christianized and baptized into the Church years ago, and that they have acquired many of the customs of civilized life, it is questionable whether they can be induced to change their peaceful pastoral life of liberty among their herds, and come to a reserve where their movements will be restricted. The country they principally inhabit furnishes ample pasturage for their numerous bands of stock, while any point to which they might be removed would alone offer cultivable land, to which branch of industry they are not particularly addicted, as the raising of stock appears to be their specialty. A large number of them live in the vicinity of Tucson, and are self-sustaining, industrious, and well-behaved people; their women are virtuous, and their general character is commendable in every way. The few at the Gila reserve are mostly employed by the Pimas, and are not altogether scathless in point of propriety; contact with the demoralized Pimas and Maricopas has had its effect upon some of them, and, like them, they will naturally go to ruin. I trust, however, that the agent will make such report as to permit them to enjoy their fair portion of expenditures made in the Territory, as a recognition of their conceded merit.

#### GENERAL MATTERS.

During the past month Dr. J. A. Touner, Dr. R. A. Wilbur, and J. H. Stout, esq., have assumed charge of their respective agencies at the Colorado River reservation, Tucson, and the Gila River reservation, the former relieving Lieutenant H. Dodt, United States Army, and the latter relieving Captain F. E. Grossmann, United States Army. In retiring, Captain Grossmann has submitted a partial annual report, which I have the honor to transmit inclosed. He has my cordial thanks for his assistance and co-operation in all matters connected with this department, and I can bear cheerful evidence to his sterling ability and judgment, as well as his unselfish zeal and scrupulous exactions in all things pertaining to the business of his agency.

I also have the honor to transmit the report of Dr. J. A. Touner, of the Colorado River reserve, accompanied by statistical returns of education and farming, necessarily limited by the few days only that he has had charge of the agency.

My attention has been directed to the act of Congress approved March 31, 1871, respecting "disbursing officers," &c., and their discretion to pay "fifty per centum" value of supplies furnished to the Indians by contract or otherwise, or the transmission of the original bill to the Department for its approval in full before payment of any portion. While intending no disrespect to the law, or the orders of the Department, it does appear to me superfluous that while the original

contracts are of record in the Department at Washington, a contractor should be compelled to accept 50 per cent. of his pay after he has made satisfactory delivery under the contract, and then wait an indefinite time for the balance. In this remote country it works a positive hardship to the parties interested, and instead of acquiring a fair remuneration on their contracts, they ultimately culminate in loss. In any future contracts made in this Territory this circumstance will be prominent, and operate to increase the value of each article contracted for by just so much as is lost in time on the payments, which would appear, from experience had, to be about fifty days.

In reviewing the different subjects recommended in this report, the vital question of resources comes prominently to the front. The appropriation made by the last Congress, of \$70,000, is wholly inadequate to meet the various draughts upon it arising from the formation of a new agency, the payment of salaries to the superintendent and agents, heretofore paid from the War Department, and an innumerable quantity of minor requirements, at once necessary and important. In addition to which, the appropriation by the Department of \$5,000, more or less, of the above amount, for expenditure with the Moquis, renders the active supply for distribution among the Mohaves, Yumas, Pimas, Maricopas, and Papagos only \$65,000. When the vast extent of this Territory is considered, the necessity of traveling over a large portion of it, the danger attendant in so doing, and the high and gold rate of cost for forage and subsistence, the figuring will demonstrate how insignificant is the sum to accomplish anything like solid results.

In order to proceed to the Colorado River reserve, where I may be compelled to remain beyond the time allowed to forward my report, it has been incumbent to anticipate events to some extent, and I trust that they will not be found remotely distant from the actual condition, as may subsequently appear.

In conclusion, I have to tender the Department my best thanks for the uniformly kind consideration of my requests, and attention to my wishes.

I have the honor to remain, very respectfully, your obedient servant,  
H. BENDELL,  
*Superintendent.*

Hon. E. S. PARKER,  
*Commissioner Indian Affairs, Washington, D. C.*

---

### No. 30.

UNITED STATES INDIAN AGENCY,  
*Gila River Reservation, Arizona Territory, August 18, 1871.*

SIR: I have the honor, in compliance with circular letter from Office of Indian Affairs, Washington, D. C., to submit the following as my annual report as agent of the Pima and Maricopa Indians of Arizona Territory.

I assumed charge of this agency on the 24th of July last, and consequently from the little time (twenty-six days) which has elapsed since my arrival, my knowledge of affairs pertaining to this agency is necessarily limited, and my report will be correspondingly meager.

On my arrival here I found my predecessor, Captain F. E. Grossmann, United States Army, ready and anxious to be relieved. He had been acting as United States special Indian agent for nearly two years, and

during that time, from all I can learn, he has devoted his time to the amelioration of the condition of both tribes of Indians on this reservation. He has earnestly studied their wants, and faithfully striven to secure them.

In retiring from the not altogether pleasant duties of agent at this place, he carries with him the respect of all well-meaning men, and the consciousness of having done his duty in serving, with the means at his command, the best interests of the red men under his charge.

On taking possession here, I found a commodious building erected for the use of the agency, by your predecessor, Colonel George S. Andrews, United States Army. It contains office and rooms for the agent, a moderate-sized school-room, quarters and office for a physician, a good well, stables, corral, &c. I found three different parties in possession of licenses to trade with the Indians on this reservation; two of whom, Messrs. Moore & Carr, and Messrs. McFarland & Forback, have establishments in operation, and the other, Mr. George Ting, will, in all probability, commence trading within a few weeks.

A Mr. Richard & Co., alluded to in my predecessor's report last year, (see page 123, Report on Indian Affairs, 1870,) has for several years kept a trading-post on this reservation. His last application for license was refused by my predecessor, on the ground that he was not a proper person to trust as Indian trader.

Notwithstanding the refusal of his application, he still continued to remain on the reservation trading with the Indians until the 20th of June last, when Captain Grossmann, under instructions from your office, made a seizure of his establishment. The whole matter has been referred to the honorable Commissioner of Indian Affairs at Washington, and it is the opinion of this office that illicit trading on and in the vicinity of this reservation will, at an early date, meet with a merited suppression.

There are two other parties doing an illegal business near the lines of this reserve—a Mr. F. M. Larkin, who keeps a stage-station on the main road passing through this reservation, and within a few hundred yards from the line; and a Mr. Henry Morgan, who has a store a few miles from the same route, on the road leading from it to the Salt River settlements. I understand that both these cases have also been represented to the proper authorities at Washington, and suppose both will be covered by the decision in the case of Mr. Richard & Co.

I also regret to state that it is generally believed that some of the settlers living on the Gila River, above this reservation, (Mexicans, I believe, all of them,) and who are nominally tillers of the soil, are actually disposing to these Indians a greater or less quantity of intoxicating liquors every week. Thus far this belief has not been ascertained to be a fact from positive proof; but the circumstantial evidence, such as seeing Indians return from that portion of the country under the influence of liquor, leads me to conclude that it is not unfounded. It has furthermore reached me that there are some parties at Adamsville, (a small settlement above the reserve,) who vend ardent spirits to Indians under the shelter of a territorial license.

My predecessor, in his last report, alludes to the last-named place, and states having received promises from the military commanders in that vicinity in answer to his application to them to assist him in "bringing to trial such persons as may be guilty of selling liquor to the Indians."

Before leaving this subject, I would earnestly recommend that the fullest possible power be delegated to the agent to aid him in suppress-

ing this seemingly growing evil, and would suggest that he be authorized to call upon the military authorities for assistance in the suppression of both liquor venders and illegal traders, and until this immunity is secured to them, I entertain but little hope of any considerable advance in the physical, mental, or moral scale of these Indians.

Some of the old chiefs and head-men of these people have assured me of their dislike to the habit of indulging in intoxicating drink, but do not hesitate in admitting their utter inability to restrain their young men from the practice.

The next evil to which my attention has been more directly called, and which bids fairly to result most disastrously if not met with a prompt and firm suppression, is the apparently increasing tendency of these Indians to leave their reservation in bands of perhaps from thirty to one hundred strong, and move on to or near the cultivated lands owned and occupied by white settlers in the vicinity of this reserve.

My predecessor, in his report for last year, alluded to this practice, and cites an instance in which 400 Indians left this reservation in November, 1869, and moved into the fields of the settlers, near Adamsville. He reported the case to the military authorities, but failed in securing any aid from them to compel the return of these raiders within their own lines. During my short residence here, numerous complaints have reached me from the settlements on Salt River, generally to the effect that these Indians have, to the number of several hundred, moved into the vicinity of the white settlements of that section, and are daily depredating on their fields and vegetable gardens.

In two or three cases these red raiders have taken possession of the houses of the settlers living in the suburbs of the thinly-populated districts, and after rifling them of their contents, have actually destroyed them. An affidavit of one case, to the effect of the above statement, is now in my possession. Several meetings have been held by the citizens of these invested districts, and formal petitions have been forwarded to me, asking my influence to assist them in ridding themselves of these depredators, but, being powerless to act, I could only advise. Being unable to procure protection from the Government, these pioneers have, as a last resort, banded themselves together, and I believe now are fully determined to defend their homes with their lives.

The Indians having been allowed from time immemorial to follow the bent of their own inclinations, unrestrained by any external force whatever, have at last fully acquired the impression that there is no power strong enough to subject them, and indeed when the young men are told by the old chiefs or head-men of the might and strength of our Federal Government, which will some day be turned against them if they still continue to molest its citizens, they laugh and ask: "Why does not the Great Father do something with us if he is so powerful as you say? We do not believe it; there is no power greater than ourselves."

The settlers are firm and determined and the Indians are insolent, and if the latter do not from this time forward restrain their propensity to appropriate to themselves the property of others, the most fearful results will inevitably ensue. If they still intend to depredate on the fields of their white neighbors, they will do it over their dead bodies, and the oft-repeated boast that they "have never shed the blood of a white man" will have soon passed into history.

On the 14th instant a letter was received at this office from Messrs. Moore & Carr, Indian traders on this reservation, that the Indians had closed their establishment. No other reason was given for this unwarranted procedure than that these Indians wanted silver for their grain

which they had brought there to sell. As this has not been the custom on this reservation, it is plain to my mind that this action was the instigation of some white man, and it is generally believed to be the work of some interested parties who wished to control the grain trade of this reserve, which amounts to over 3,000,000 pounds annually. The store yet remains closed, and the Indians threaten to burn it down if the silver is not forthcoming, and yet the agent is unable to do anything toward preventing such violations.

Antonio Azrel, the head chief of all the Pimas, whose house or hut is within a few hundred yards of the agency building, is in almost daily communication with this office. I believe him to be a well-disposed man, but he has little or no power to restrain his tribe from their evil inclinations. Not having the moral courage to assert his authority, the evil-disposed are allowed to do as they please. Conscious of his inability to govern and careless as to the results, the cares of his nation hang as lightly on his shoulders as do his raven locks. I would strongly recommend that the Government at once give these Indians to understand that it is the power to which they must yield obedience, and if they are once made to feel the force of our Federal strength, I apprehend no further trouble from them. I would suggest that the military forces in this vicinity be instructed to compel these Indians to remain on their reservation.

It is with pleasure that I now turn from the rougher to the better side of this semi-civilized red nature. There is much to say in favor of these Indians, and it must of necessity be brief. They were, according to past report, at one time well disposed toward white people, and in time gone by have proved on more than one occasion their friendship for the whites. It would be absurd to suppose that this relapse is without a reason.

To ascertain the true cause, I venture to say, will be to convince any one who will make the investigation, that the evil that at present pervades these tribes has its origin from the hands of bad white men. The universally bad example of the latter has, in many instances, met with too prompt an imitation by the untaught savages, while his oft-repeated violation of promises made to them leads them naturally to look with distrust upon the whole white race. The Government, in permitting such bad men to reside within easy communication of them, as a necessary consequence, shares this distrustful feeling, and it is not to be wondered at that they entertain many doubts as to the purity, strength, and goodness of our great republic. They are self-sustaining, yearly producing enough of grain and staple vegetables to procure for them all the necessities and some of the luxuries of life. Very little money is spent annually for the benefit of the Indians living on this reservation, and aside from the agricultural implements given them, they are limited to a very few presents. They are a shrewd and quick-witted people, and very apt at trading, and in this respect they will compare favorably with the white man. They are intelligent, and some of them, especially the younger ones, have shown themselves willing to learn. I cannot urge too strongly that every available facility be afforded them in this direction.

There is at present a teacher, Rev. C. H. Cook, employed at the agency, who will begin school probably on the 1st of September, or as soon thereafter as the children return to their villages from the fields, where they are now getting in their crops.

As it is vacation now for the purpose above mentioned, and has been since my arrival here, I cannot, from observation, furnish any state-

ments on the subject of education, but I am assured by Mr. Cook that, with proper facilities, in a very short time we may accomplish much in this direction. Books of the most primary class are in demand, and I am lately in receipt of your letter stating your intention to furnish them at the earliest possible moment. They are as yet in total darkness as to any spiritual belief, but have expressed a willingness to learn, and some of them have frequently asked the teacher here when he would preach to them. As the Government contemplates the moral and mental as well as the physical advancement of this people, and as such a regeneration must necessarily, from their present ignorant state, be the work of years, the sooner commenced the quicker accomplished. I would, therefore, recommend that every reasonable means be furnished them, or the agent in charge, to aid in their education and Christianization, and would suggest, as a means to accomplish this end, that a large school-building be erected in the vicinity of this agency, capable of accommodating from sixty to one hundred pupils, with rooms for teachers, &c., where the children of both sexes, under competent religious instruction, could be taught the rudiments of education, the domestic duties, the necessary mechanical knowledge, and improved methods of farming. This, as a matter of course, can only be done at a considerable cost, but, in my opinion, the end aimed at can be reached through this means far sooner than any other manner now deemed practicable.

Several of the religious associations have lately entered into this work among the Indians with a zeal that cannot fail of a rich success. They are earnest and anxious to do good in this direction, but as a general thing have so many benevolent channels through which to expend money, and their resources being more or less limited, the amount at their disposal to devote to these new demands will be proportionately small.

The society which your agent has the honor to represent (the Reformed Church) is deeply interested in the spiritual and mental advancement of the tribes on this reservation. I have no doubt it will fully indorse my recommendations, and it may possibly stand ready to act conjointly with the honorable Secretary of the Interior and honorable Commissioner of Indian Affairs, not only in laying the foundation of this great work, but in conducting it to a successful and fruitful end.

In taking possession here, I received from my predecessor one large wagon, a light wagon in which to travel about the reservation, two mules, a horse, two sets harness, &c. The light wagon is in very poor repair, and the mules should be replaced by two or four others, large and strong ones. With four good mules I could furnish all the hay necessary for use at this agency, and in this way the animals asked for would soon pay for themselves. The harness is also in a very bad condition, and has been mended and pieced so often that comparatively little of the original material remains. Should the mules be furnished, complete new harness would be necessary.

I also received quite a supply of medicines, which, however, needs replenishing. I understood from my predecessor that you would be pleased to furnish them at an early date.

I am very much in need of lumber at the agency, also lime and tin-spouting, to protect the roof of the agency building against the rain. A new force-pump, with 100 feet of hose, is also on the list of necessities, and in case of fire in any part of the agency building would be invaluable.

A thrashing-machine, under the supervision of the farmer, would be of almost inestimable value to the Indians. I would also strongly recom-

mend that the Government put up a small flouring-mill on the reserve, and under the supervision of a competent miller these Indians would be able to supply, at lower rates than now paid, all the flour consumed by the military in this Territory. This statement certainly deserves consideration.

There are at present five persons engaged rendering services for this reservation, viz, a teacher, carpenter, farmer, blacksmith, and an interpreter. The first three mentioned reside at this agency. The other two do not, for the simple reason that their salaries alone will not support them. The blacksmith lives outside the lines of this reserve, on the main road, and keeps a public blacksmith-shop, so when any work, repairing, &c., is necessary, I am obliged to take it twenty-four miles to have it done, which, as you will readily see, is a great inconvenience; but as the salary allowed for a blacksmith is only \$600 per annum, I cannot do any better at present.

My interpreter remains with me only four days of the week, spending the remainder of his time on his little farm or patch of ground, a few miles above this place. His salary is only \$500 per annum, and he cannot be expected to give his whole time to a work that will not keep him in the necessities of life. As I am called upon daily to attend in various ways their wants, this, as you will easily understand, is of the greatest inconvenience to me, more especially as, being a stranger to their language, I have to depend solely upon an interpreter.

A physician is needed very much indeed, and if one is not secured for the reservation at an early day, it will take a long time to place these two nations on their former basis of health. A good physician is very desirable, but as those who stand No. 1 in their profession can, in almost any locality, acquire a practice that will yield a greater pecuniary remuneration than the position at this agency will afford, they are slow to accept my offers.

As the wagons at the agency, and the carts, &c., of the Indians are constantly getting out of repair, authority should be granted for a wheelwright, and I would recommend that the salaries of the above-named persons should be fixed thus: For a physician, \$1,800; for a teacher, carpenter, wheelwright, blacksmith, and farmer, \$1,200; and for interpreter, \$900 per annum.

These, in my opinion, are the very lowest figures which will secure good, reliable, and capable men, and the exorbitant rates charged for the necessities of life renders it almost impossible to live with a less salary than the above named.

I would state, in support of my recommendation, that the military authorities in this Territory are constantly employing all of the mechanics above mentioned, and are paying them not less than \$1,500 per annum. To this is added a ration, which the Indian department does not furnish, and which is worth \$400 or \$500 more, making in all \$2,000 a year. Again, the Government pays in paper currency, while here the price-lists are established on a gold basis, which, for instance, at 12 per cent., (the present premium on gold,) makes a difference of \$180 in a salary of \$1,500 per annum, leaving the employé with just \$1,320 a year.

Should the amount recommended for a wheelwright and blacksmith be allowed, two small shops and a supply of material would be necessary. The blacksmith-shop is of the utmost importance to the well-being of these Indians. It is my intention to take, if possible, a few of the Indian boys, and, placing them in charge of these different mechanics, give them such instruction as will be of benefit to them and the tribe. This, if

they are so inclined, will be a step in the right direction; at any rate, it will test their ability and willingness to learn.

I inclose statistics of farming and education, marked, respectively, A and B. Both of them, particularly the former, are more or less inaccurate; but I have based the estimate on such information as I have been able to gain in the few days since my arrival here.

In conclusion, let me say that, with proper management, firm measures to restrain their evil inclinations, a faithful adherence to any policy looking to their mental elevation, and an untiring devotion to their moral wants, will, in time, produce from this ignorant and barbarous people a nation of whom we, as co-workers to this end, may justly be proud.

Permit me to take this occasion to thank you for your assured intention to co-operate with me in any and all measures contemplating the interests of these Indians; and, hoping that our mutual efforts will not prove unavailing,

I remain, very respectfully, your obedient servant,

J. H. STOUT,  
*United States Special Indian Agent,  
Pimas and Maricopas.*

H. BENDELL, Esq.,  
*Supt. Ind. Affairs Arizona Territory, Arizona City, A. T.*

---

No. 31.

ARIZONA CITY, ARIZONA TERRITORY,  
*August 16, 1871.*

SIR: I beg leave to subjoin herewith a report of affairs upon the Gila River reservation, Arizona Territory, for the time intervening between the date of my last annual report and the 24th of July, 1871, upon which day I was relieved from the duties of United States special Indian agent for the Pima and Maricopa Indians by J. H. Stout, esq.

During that time I have seen no reasons for changing any of the views expressed in my last annual report, and desire now only briefly to report upon what has been done during the time referred to, and, in closing, to offer a summary of what, in my judgment, remains to be done.

The physical condition of the Indians under my charge being bad, the services of a physician were absolutely necessary. Dr. R. A. Wilbur devoted himself earnestly to the work, and with good results, but, unfortunately for the Indians, he obtained a more lucrative position elsewhere, and resigned on the 31st December, 1871, since which time the agency has been without a physician.

On the 1st January, 1871, I engaged the services of Rev. C. H. Cook as teacher for the young children of the Indians. After devoting himself for a short time to the study of the Pima language, he opened school on the 18th of February, continuing the same until the 31st May; average daily attendance of pupils during term being 38. Considering that this was the first attempt ever made to instruct the children of these Indians in a regular school, and that the teacher labored under the disadvantage of having but a very imperfect knowledge of the Indian language, the results have been more than gratifying. The children, though not very regular in attendance, have learned the English alphabet, some words of English; they write both letters and numbers reasonably well, count in English, and sing several hymns. It must be remembered that none of

them had the slightest idea of English before school commenced. The heat of the summer months and the harvest season made the closing of the school a necessity, but it is intended to reopen whenever the state of the weather will justify. The school was a day-school, the pupils coming from one to five miles for the purpose of attending it. The teacher, Mr. Cook, has been laudably eager in his work, and has faithfully attended to his duties, although I doubt the good policy of issuing bread, and at times candy, (panoche,) to the pupils, which he has done for the greater part of the school-term, under the mistaken belief that the children were starving.

In my opinion day-schools on the Pima and Maricopa reservation will never do any permanent good. The children should be continuously under the eye of the teacher, and a boarding and industrial school seems to be best adapted for this purpose. The morals of the Indians lately under my charge are bad; children, no matter how well instructed in a day-school, being thrown in daily and hourly contact with adult Indians, must become contaminated to a greater or lesser extent; while in a boarding-school, Indians of immoral and vicious tendencies could be excluded. On the 19th of January, 1871, I reported at length upon this subject in a communication addressed to the honorable Commissioner of Indian Affairs, and would now respectfully call attention to the same.

The crops of the Indians, (wheat and barley,) the winter crop, were abundant during the past season, but the corn and melon and pumpkin crops will be a failure, owing to the scarcity of water in the Gila River.

In order to give the Indians a better supply of water, an extension to the present reservation had been surveyed in the spring of 1870, which, if granted, would have supplied the Indians with ample land, and fine facilities for irrigation. Congress, however, failed to approve the extension, and the result is that no corn can be raised this fall, and it is clear that, owing to the increasing settlements made by whites and Mexicans above the reservation on the Gila River, the time is not far distant when the Pimas and Maricopas (an agricultural people, without doubt) will be without the necessary water to enable them to raise any crops.

A carpenter, a farmer, and a blacksmith have been employed at the agency during the greater part of the time. The former constructed an undershot Chinese water-wheel by means of which water (for irrigating purposes) was raised 16 feet from the river to the land immediately adjoining the Gila River. With the water thus obtained, it was proposed to irrigate a tract of about eight acres of land which had been cleared under the charge of the farmer, but, unfortunately, the low state of water in the river ever since May last has prevented the execution of the plan. It is believed, however, that during the winter months a crop of barley or wheat can be successfully raised, for at that time the river generally contains a larger quantity of water.

During the past year the Indians planted 10,000 pounds of barley issued to them by the Government, and raised a handsome crop, which they sell at fair prices. According to agreement, they are now returning to the agent an equal amount of barley to replace the seed given them. Up to the time of being relieved I had collected about 3,600 pounds.

The blacksmith has repaired tools and farming utensils of the Indians, but the salary of \$600 per annum is entirely inadequate, considering that he has to furnish his own shop and tools.

During my administration, since my last annual report, I have issued to the Indians of the reservation, and also to the Papagos, a liberal supply of farming implements, and if the Government is inclined hereafter,

as heretofore, to extend a helping hand to the Pimas and Maricopas, I would respectfully suggest that in the future only agricultural implements and tools, medicines, and articles required in the school be furnished. Clothing or food should never be given them, for they are well able to purchase or to produce all they require. I should also be strongly in favor of giving them a thrashing-machine next year.

I regret that I cannot report an improvement in the conduct of the Indians lately under my charge. They still leave their reservation whenever they feel like it, (some Maricopas have even permanently settled in the Salt River Valley, thirty miles from their reservation;) they still steal cattle and horses whenever opportunity offers; they still destroy (sometimes wantonly) the crops raised by the hard labor of whites and Mexicans in the vicinity of their reservation, and though often advised to refrain, and often asked to restore stolen property, they still persist in refusing to do so. There are of course many good men among them who discountenance the evil-doing of others, but, since the tribes, as tribes, never brook control, the better-disposed Indians cannot exert any influence over the bad ones. This is so well understood by the Indians themselves that the bad ones deride the chiefs whenever the latter attempt to advise them to behave themselves, while the better class only recently united in asking me to represent to the Government that they were powerless to curb the evil inclinations of the bad men of the tribes, and to ask the Government to send troops to the reservation with instructions to punish the thieves, promising at the same time to assist the troops whenever they were ready to deal out chastisement. It is undeniable that the number of thieves and rogues is increasing from year to year, and I see no reason for changing my apprehension (frequently expressed before) of ultimate difficulties between these Indians and the whites, and once more desire to say a word of warning.

The settlements on the Upper Gila, and on the Salt River, are growing rapidly. The inhabitants thereof, pioneers and frontiersmen though they be, have universally treated these Indians in the kindest manner.

They never have encroached upon the Indian lands nor interfered with Indian property, and, though sorely imposed upon at times by the Indians, have not revenged themselves for injuries sustained at the hands of the Pimas and Maricopas, but have rather tried the more peaceful way of repeatedly representing their grievances to the General Government in the form of petitions. These petitions so far have remained unanswered. The conduct of the Indians is becoming worse from month to month; before long some settler, unable any longer to endure to see his crops destroyed before his very eyes, will defend his property even though odds may be against him, and should any one be killed in the conflict, either white or Indian, who is there that can foretell the consequences? The reservation contains 1,088 warriors, nearly all armed with fire-arms, who could desolate this portion of the Territory if inclined so to do. It is true that they never have killed a white man; it is also true that the good men of both tribes do not desire to do so; but it is to be apprehended that, once life has been lost on either side, the feelings of all concerned, and their friends and relations, will be wrought up to such an extent that it will be impossible to allay the storm until after more blood has been shed.

To avert this, and for the sake of the Indians themselves, (who can be made good Indians if they are made to feel that they must be good,) and for the sake of the citizens of the country, who, trusting that their Government will protect them, toil from year to year in the development of a Territory which is not extraordinarily inviting, I would urge

that the commander of the Department of Arizona be authorized and directed to furnish such troops as may be necessary to enable the agent to arrest known offenders among the Indians, and that from this out all Indians guilty of stealing from whites or Mexicans may be tried before the civil courts of the Territory and punished according to law. To accomplish this, a company or more of troops should be permanently stationed upon the reservation and near the agency buildings until the Indians have learned to know that the Government of the United States has not only the will but also the power to compel them to conduct themselves properly.

But while I am anxious to have protection afforded to respectable white men and Mexicans against the thieving propensities of the Pimas and Maricopas, I, on the other hand, pray that the Pimas and Maricopas may also be shielded from the immoral and swindling operations of white men.

In my last annual report I took occasion to represent in what manner Indian traders had been in the habit of carrying on their trade, and expressed a determination to lessen their number. Another year's experience has only strengthened the views then expressed, and confirmed me in the opinion that some of the traders on or near the Gila River reservation were not men "fit to be in the Indian country." This being my estimate of their character, I refused to renew their licenses on the 1st of January last. Nevertheless, they all continued to trade as heretofore, totally disregarding the authority of the Indian Department. They were notified that unless they desisted from trading, legal proceedings would be instituted against them. This notice also was disregarded by them; their trading with the Indians was continued, and, in addition thereto, they employed every means in their power, fair and foul, to lessen my influence with the Indians. Finally, under instructions from the superintendent of Indian affairs for Arizona, and in compliance with a circular letter from the Indian Office, dated April 4, 1870, I attempted to seize the merchandise of these illegal Indian traders. I accomplished a seizure at the trading establishment of W. Bichard & Co., at Pima Villages, Arizona Territory, but a like attempt on my part at the store of F. M. Larkin, trading with the Indians at Sweetwater, Arizona Territory, was forcibly resisted by the owner of the store. Resistance was also threatened by H. Morgan, a third illicit Indian trader. Since the seizure, which was made at Pima Villages, Arizona Territory, on the 20th June, 1871, the three traders above named have combined in their opposition to the enforcement of laws. F. M. Larkin and H. Morgan & Co. continue their trade triumphantly at their places of business, and W. Bichard & Co., though closed up at Pima Villages, still trade with the Indians at Blackwater, Arizona Territory, all of which stores are in close proximity to the reservation. It is a contest between money and law. The governor of the Territory, misled by representations made by some of the illegal traders, has espoused their cause, and has denounced the action of the superintendent and myself in public as robbery, and thus countenances men, whom even the Indians denounce as bad and immoral, in a course which is opposed to law. The chief justice of the Territory, before whom the issue will be tried eventually, has given private opinions adverse to the officers of the Indian Department; the United States marshal, recently appointed, and instructed to receive from me, on behalf of the United States, the property seized by me at Pima villages, for some unknown reason failed to qualify; the United States deputy district attorney, when directed to file information against the property seized, instantly resigned his position, and immediately

after appeared as adviser to one of the illicit traders, and the officers of the Indian Department within the Territory stand almost alone in their effort to carry out the law, in the case made and provided. Such was the state of affairs when I transferred the agency to my successor, J. H. Stout, esq., on the 24th of July last.

To make certain of improving the Indians and inducing them to abandon thieving ways and immoral practices the following changes are required, in my opinion, on the Gila River reservation, Arizona Territory, viz:

1st. Bad traders must be removed. Their example is pernicious and their counsels to the Indians being bad have a tendency to weaken their respect for their agent and the Government.

2d. Military assistance should be given to the agent to enable him to seize the merchandise of illegal Indian traders (it being forfeited to the United States according to law) and to arrest evil-doers among the Indians. A show of real strength will soon demoralize both bad white men and bad Indians.

3d. The reservation of the Pimas and Maricopas should be extended so as to give them a certainty of water-privileges for irrigating purposes, thus forever putting at rest their just complaints about settlers who take the water from the river above the reservation.

4th. A good physician, no matter what his salary, must be found to arrest the fearful spread of syphilitic diseases among the Indians, and a well-arranged hospital should be provided large enough to accommodate patients until a permanent cure would be effected.

5th. And perhaps most important of all the day-school system should be abandoned, and in its place a liberal boarding and industrial school should be started. In connection with this school a blacksmith and wheelwright shop should be erected and furnished where the young boys might learn something more useful than hunting birds' nests and shooting arrows. At least one of the teachers employed ought to be a lady who could impart instructions to the girls in sewing, cooking, washing, ironing, and general housework.

I am well aware that to carry out the above suggestions a large expenditure of money will become necessary for the first year at least, but if it is the intention of the Government to redeem more than 4,000 human beings, who can be redeemed if the means are furnished, now is the time to do so. Soon the Texas Pacific Railroad will pass through Arizona, possibly through this reservation; with it laborers, immigrants, and travelers will come; a closer contact with the whites will have a tendency to draw these Indians only deeper into the vortex of white men's vices, which unfortunately they have learned to know too well already; the thieves of the day always going unpunished, in time the whole nation will learn that it is easier to steal than to work for a living, particularly when water fails to furnish nourishment to the growing crops; the physical condition of the Pima Indians not attended to will become worse from year to year, and before long the Pima Indians, at one time, perhaps, the best on the continent will be known no more.

I for one do not believe that it is necessarily the destiny of all the Indians to be "crowded to the wall." I believe that in time the Pima Indians can be made industrious, honest farmers and respectable citizens; but before that time can come I would not spare the rod now when, for the Indians' own sake, it should be applied, and above all things I should be in favor of weeding out all men, be they whites or Mexicans, who under the name of Indian traders debauch the Indian

women, defraud the men, and weaken the influence of the Government in the whole tribe.

If the Government will now exert its power, if the agent, no longer opposed by bad men, (no matter how rich they may be,) can impress the Indians with the firm knowledge that he and he alone is their adviser, (which he ought to be;) if the Pima and Maricopa boys and girls can go to a well-conducted school, where they will gain cleanliness, industrious habits, a knowledge of the world and its better ways; and if the sick can find an asylum where their bodily infirmities will be properly cared for, no doubt of it but a few years will show a decided improvement in the conduct of all the Indians, and when the temptation does come perhaps they will be better able to resist it.

Something must be done and must be done soon to avert possible calamity, and the plan above submitted will never be as expensive as a war with these Indians would be.

Very respectfully, your obedient servant,

F. E. GROSSMANN,  
*Captain, Seventeenth Infantry.*

H. BENDELL, Esq.,  
*Superintendent Indian Affairs for Arizona Territory,  
Arizona City, Arizona Territory.*

---

No. 32.

OFFICE UNITED STATES SPECIAL INDIAN AGENCY,  
*Colorado River Reservation, Arizona Territory, August 8, 1871.*

SIR: I have the honor to make the following report for the year ending July 31, 1871.

As I only took charge of the agency July 21, 1871, my short time in the office prevents more than a statement of the condition of affairs as found upon my arrival.

So far as ascertained about one-third of the Mohave tribe are on the reservation, the remainder being at Fort Mohave, and the country intervening between here and there; a few have come and others expressed a desire to live on the reservation; most of them are deterred by the misrepresentations of interested parties and the feud existing between Siccahut and Iritaba, the former being at Fort Mohave and the latter here. Those now on the reservation are here voluntarily, and go back and forth as pleases them, never absent, however, on ration or annuity day; they are generally well-developed, especially the females, who do most of the labor, but the majority of the tribe suffer from syphilis; that, with rheumatism in the winter, constitute their chief ailments. Their mental capacities are not inferior, but being untrained and uncultivated have developed nothing marked except shrewdness and vice. Educating the children can only be conducted on the compulsory system, as the parents are averse to their learning English, and would at least oppose it quietly. As we cannot exercise any authority without troops, it would be useless to attempt a school now, although eminently desirable, as at least 150 are just at the age to learn, being bright and quick to learn any mischief. There is but one building on the reservation, and that entirely inadequate for its present uses, so we would need a school-house and house for the teacher before starting the project. It is to be hoped they will soon be ordered built, and the school started.

The moral condition of the tribe is of the lowest character, mere children being inducted into the lowest forms of immorality.

The clothing of the men consists of simply a breech-cloth, and that of the women of a petticoat of bark. Both are fond of our clothing when given them, but will not take the trouble to make it, although a number can sew, and often have money which they prefer spending for tobacco or jewsharps.

Rations of flour and beans are issued to them weekly when on hand, and beef every fortnight. Besides these, they are fond of mesquite beans, which they collect large quantities of, and, with screw-beans, constitute a large part of their food, after selling their flour to other Indians, in order to have the money for other purposes.

Liquor is forbidden on the reservation, but La Paz, being only forty-six miles distant, supplies all who have the money and inclination to go there; the agent being without authority to control their movements, or power to suppress any trouble arising among them, there being only a sergeant and eight men to preserve order. A company of troops was stationed here until last spring, when they were removed, and an officer with fifteen men ordered here. The officer came, left the men, and returned to Fort Yuma, without authority from headquarters of the department. Seven of the men have been discharged, leaving the force wholly inadequate; and a further reduction will take place in a few days by expiration of term of service of others.

About 500 acres are being cultivated this year by the Indians, being an increase of 200 acres over last year. It consists of corn, melons, and pumpkins. Each of those cultivating planted only enough for their own consumption. They could not be induced to farm for the reservation unless paid by the day, so they were permitted to work their own way, whereby much labor is lost and nothing taught them.

The irrigating canal proved very successful so far as completed, but a flood-gate, with a canal to let off the surplus water, is still necessary; and by continuing the canal sufficient land can be irrigated to supply the entire tribe of the Mohaves, with the other tribes on the river, with an abundance of farming land; and many of them declare their intention of coming on the reservation as soon as the canal is completed far enough to give them all land. The last two years there has been no overflow of the bottom-lands of the river; consequently, nothing can be raised except on irrigated land; and the Indians of the river are more favorably disposed toward the reservation than heretofore. As the water only enters the canal at the high stage, only one crop can be raised by its means, whereas, if we had a steam-pump to supply it with water the year round, two, and sometimes more, crops could be raised. Then the Indians might be made self-supporting, by withholding their rations and compelling them to raise their own food. Of course, any change of this kind would be resisted by them, and could only be carried out with the moral support at least of troops, as in their vicinity the Indians fear their power; but, isolated as is this agency, there is nothing to intimidate them or other tribes from committing any depredations or crime.

Very respectfully, your obedient servant,

J. A. TOUNER,

*United States Special Indian Agent.*

UNITED STATES COMMISSIONER OF INDIAN AFFAIRS,

*Department of the Interior, Washington, D. C.*

(Through superintendent's office.)

## No. 33.

UNITED STATES AGENCY FOR PAPAGOS,  
*Tucson, Arizona Territory, August 26, 1871.*

SIR: In accordance with your instructions of 20th July, I proceeded on the 30th ultimo to visit the different pueblos occupied by the Papago Indians under my charge.

I first visited San Xavier del Bac, an old mission, where I found some fifty families; Ascension Orilla captain of the band. This portion of the tribe claim to have always occupied this ground, their ancestors having helped to build the church which, to this day, is a model piece of architecture, and held in veneration by these descendants. They look upon the fine piece of agricultural land adjacent to the church as their property, and have this year, as heretofore, raised a good crop of wheat and barley from the same. They have also quite a large herd of horses and cattle. This band has proven itself of great service to the white inhabitants of this section in recovering and protecting stock from the hostile Apache, though there have been instances when, on account of their small number of warriors, they have been unable to cope with the foe, and have been sufferers from their ravages. They are peaceful, comparatively intelligent, and very industrious, being of great assistance to the farmers of the Santa Cruz Valley in harvesting and as herders.

From this point I proceeded to the different villages along the Sonora border, viz:

|                    | Families.    |
|--------------------|--------------|
| Tacqnison.....     | 70           |
| Topony.....        | 80           |
| Cumaro.....        | 200          |
| Cahuabi.....       | 80           |
| Comohuabi.....     | 80           |
| Tecolote.....      | 500          |
| Miscellaneous..... | 100          |
| Total.....         | <u>1,110</u> |

These are all occupied at home in stock-raising, as there are no agricultural lands adjacent; the only crop they raise is on what is termed "Temporal," on which they plant corn and melons, trusting to rains for water, as there are no streams for irrigation. These lands are very fertile, and if some provision could be made to irrigate large and profitable crops could be raised.

I could not help but feel impressed with the feasibility of sinking artesian wells in this location, as the indications are that water could be easily reached, from the fact that wherever wells have been sunk they have reached under-ground streams having a strong current.

There are several villages extending along the line, say to the extent of twenty, reaching west nearly to the Gulf of California. But as most of the population were absent in Sonora, engaged in harvesting, I did not deem it advisable to visit them. I learned from Captain José Maria Casador that these villages would average 200 families or more each.

In all of them I found among the Indians those who were conversant with the Spanish language, and could thus, through my interpreter, make known to them the desires of the Government in regard to their welfare. They are ready and willing to conform to any proposition the

Government may wish to extend to them. They complain, and with reason, perhaps, that they have been neglected, while other Indians, who in no respect could compare with them in fealty to the Government, have yearly been provided for, and they only occasionally. They want something permanent, some assistance continued, until they are so established that they can feel able to take care of themselves under an improved and civilized organization. They say they have been promised schools, agricultural implements, and improved breeds of stock; but the promise has been fulfilled only to a very limited extent. From their employments and associations they have become more intelligent in regard to these matters than any other Indians, not excepting the Pimas, which tribe is really a part of the Papago Nation, speaking the same language and formerly inhabiting the same country. Therefore they looked upon my visit and the object, as made known to them, with some incredulity, as for nearly four years no one had visited them from Government, while they had been promised much. However, I would add in this connection that Captain F. E. Grossmann, United States Army, formerly agent for Pimas and Maricopas, looked after their welfare to a considerable extent, furnished them a physician, blacksmith, and distributed some agricultural implements, &c., for which they felt very grateful. A large number of these Indians are in the habit each year of coming to Tucson, or near by, and building *jacals* for the winter, getting occasional employment from citizens, or bring in hay, which finds ready sale.

In conclusion, I can do no better than to refer you to the able and reliable reports of M. C. Davidson, as contained in the "Report of the Commissioner of Indian Affairs for 1865," p. 131. Colonel Davidson informed himself more thoroughly in regard to these people than any one who had preceded him, and appreciated entirely their requirements.

I would suggest that, as soon as practicable, schools be established; that they should have a blacksmith. The chief remarked that many deaths had occurred from want of medical aid. They were formerly provided with a physician, and I earnestly recommend that one be again employed for the agency, and a full supply of medicines.

I can but feel that, from a careful study of the character and habits of these Indians, having lived among them for the last five years, that they are deserving of *particular* attention from the Department, and will amply repay Government for any expenditures made in their behalf.

Very respectfully, your obedient servant,

R. A. WILBUR,  
*United States Special Indian Agent.*

H. BENDELL, M. D.,  
*Superintendent Indian Affairs Arizona Territory,  
Arizona City, Arizona Territory.*

---

No. 34.

## NEW MEXICO SUPERINTENDENCY.

OFFICE SUPERINTENDENT OF INDIAN AFFAIRS,  
*Santa Fé, New Mexico, September 25, 1871.*

SIR: I have the honor to submit this my annual report of the affairs of this superintendency during the greater portion of the past year,

together with the reports of the several agents, and your attention is invited to a brief statement of the affairs of each agency, as follows :

#### NAVAJO AGENCY.

The Indians of this agency number about 8,234 souls, and are located on the reservation in the northwestern part of the Territory, set apart under the treaty of June 1, 1868, embracing about 6,120 square miles. They are an agricultural, pastoral, and a hard-working people, and but for their unfortunate location as regards facilities for farming, they might have been self-sustaining before this time. Last year they planted largely, but owing to the absence of rain and the severe frosts early in the fall they raised comparatively nothing, and when I assumed charge of the superintendency, on the 30th of November last, I found them in an almost starving condition and raiding upon the surrounding country to sustain themselves. The sum of \$75,000 had been appropriated by Congress to feed them during the year ending on the 30th June, 1871, but owing to some informality in the wording of the clause making the appropriation it could not be drawn from the Treasury. I was therefore compelled to assume the responsibility of purchasing in open market 300 head of beef cattle, which, together with the corn that had been saved by the agent in issuing, and 50,000 pounds borrowed from the Quartermaster's Department of the Army, was sufficient to relieve their urgent wants and to enable the agent to control them until the Department, on the 8th and 15th of March of this year, authorized me to supply them by contract with subsistence, and a large amount of seed-corn, wheat, cabbage, potatoes, beans, &c., to plant. The subsistence has lasted till now. As will be seen by the accompanying report of Agent Miller, they have worked harder, and planted more this year, than at any time since they have been on the reservation, but their crops will be a total failure, owing to the same causes that operated last year.

In view of the repeated failure of the crops, and the fact that the Indians have worked faithfully this year, I would urge upon the honorable Commissioner the necessity of asking Congress to make an appropriation of at least \$100,000, for feeding them during the year ending June 30, 1872, as a failure to do so would entail a much greater expense upon the Department, and would certainly be the cause of serious trouble between the white settlers and the Indians.

I concur in the opinion of Agent Miller, that these people cannot be made self-sustaining by tilling the soil alone, and think it would be advisable to supply them liberally with sheep, for the reasons given in Agent Miller's report, and to make an attempt to introduce spinning-wheels and looms among them, which would greatly facilitate the manufacture of their blankets, and in time the sale of these blankets would be a source of great profit.

Agent Miller gives a very encouraging account of the school at his agency, and of the progress made by the scholars, considering the difficulty they have in pronouncing our language, and I invite especial attention to his remarks in regard to the kind of schools that would be most beneficial, and I trust his recommendation in regard to the appointment of a special agent will be favorably considered.

#### ABIQUIU AGENCY.

The Indians embraced in this agency are the Wemenuche and Capote Utes, numbering respectively about 650 and 250 souls. They claim and

occupy the land on, and in the vicinity of, the San Juan River, in the northwestern portion of the Territory. These, and the Utes of the Cimarron agency, have been in a very unsettled state since the treaty of the 2d of March, 1868. They have taken no interest in farming, but have sustained themselves mostly by the chase, seldom visiting the agency, and then only for the purpose of getting what few articles the agent has had authority to give them. As they were considered parties to the Ute treaty of 1868, no other provision has been made by the Government to feed or clothe them, and they have had nothing except the limited quantity of food that could be furnished out of the fund for the incidental expenses of the superintendency. The present condition and past good behavior of the Utes call for prompt assistance, and I cannot too strongly urge upon the honorable Commissioner the necessity of asking Congress to relieve them from the provisions of the treaty of 1868, and to make other appropriations for their support.

On the 3d of December last I recommended that the present agency be removed from Abiquin to Fort Lowell, (at the town of Tierra Amarilla,) and that a temporary agency be established at a favorable point on the San Juan River, with a view to make it permanent should the agent be successful in his efforts to induce the Indians to take an interest in farming, and I am still of the opinion that this is the best disposition to make of these Indians for the present. They claim that country, and will not be persuaded to leave it. They have made less trouble and fewer complaints than the circumstances of their case would seem to justify, and I commend them to the prompt and favorable notice of the Department.

#### CIMARRON AGENCY.

This agency is located at the town of Cimarron, about one hundred and sixty-five miles northeast from Santa Fé, and includes the Mouache Utes, numbering about 645 souls, and the Jicarilla Apaches, numbering about 864 souls.

One cause of complaint at this agency is the failure of the Department to send the annuities claimed by these Indians, like the Utes of the Abiquin agency. The Mouaches were considered parties to the Ute treaty of 1868, and the Jicarilla Apaches say the refusal of the Mouache Utes to recognize that treaty is the cause of the stoppage of their annuities. Another, and the greatest, cause of complaint and trouble, is the fact that the Indians claim what is known as the "Maxwell grant" of land upon which they are at present located, and where they have lived for a long time. This grant has been purchased by a company of English capitalists. The land is being rapidly disposed of to actual settlers, and this company is making extensive improvements in and about the town of Cimarron, all of which is viewed with great dissatisfaction by the Indians, who cannot be made to understand it.

For some time past I have been aware of the necessity of moving the Indians from this place, and on the 10th of December last I suggested to the honorable Commissioner that probably during the present year the Mouache Utes could be persuaded to join the Wemenuche and Capote Utes at the Abiquin agency, and the Jicarilla Apaches might be induced to join the Southern Apaches. I think this change can be effected without much trouble or expense, as I have since learned that the Jicarillas (with the exception of a small party who prefer to live with the Utes) affiliate with the Mescalero Apaches at Fort Stanton. By this arrangement considerable expense would be saved, and the Indians, being far from the evil influence of persons in the vicinity of their pres-

ent agency, would no doubt be benefited. However, if it is not deemed advisable to make this change I think a suitable reservation could be found in the northeastern portion of the Territory, where the Indians could live in peace, and where their presence would have a tendency to deter the hostile bands of Comanches and Kiowas from raiding upon the settlers. These Indians, as well as those of the Abiquiu agency, should receive prompt attention and assistance from the Department.

#### SOUTHERN APACHE AGENCY.

This agency is at present located at the Mexican town of Cañada Alamosa, on the west side of the Rio Grande, and about twenty-five miles west from Fort McRae. The agency comprises the Mimbres, Mogollon, and a few Mescalero Apache Indians, numbering about 1,210 souls.

When I assumed charge of the superintendency, in November last, I found the affairs of this agency in a most unfortunate condition as regards supplies for the Indians. The agent was powerless for want of authority, and there were no funds that could be spared for the use of that agency. The Indians had been waiting patiently for the past two years for positive assurances of aid from the Government, and at times had suffered considerably for want of food and clothing, owing to frequent and unavoidable delays in obtaining these articles by their agent. The reports of Lieutenant A. G. Hennissee, agent for these Indians, dated on the 7th and 8th of December, 1870, regarding the critical condition of the affairs of his agency, and the visit of the chief "Cochise," with a number of his people, to Cañada Alamosa, convinced me of the necessity for using any means at my disposal to prevent the Indians from leaving the reservation. I therefore wrote, December 12, 1870, to Agent O. F. Piper, who relieved Lieutenant Hennissee at that agency, as follows:

In view of the necessity for prompt action in this matter, I have to inform you that I have ventured to assume the responsibility of furnishing as many blankets of the number asked for by Lieutenant Hennissee as can be had at this place. They will be sent to you without delay, and you will consider yourself authorized, should you be convinced of the necessity for doing so, having learned the condition of affairs, to purchase a sufficient amount of provisions, so that a full ration of beef and corn (1 pound of each) may be issued to each Indian on the 21st instant, for one month.

I furnished all the blankets that could be found in this market, (less than 300,) and Agent Piper contracted for one month's supply of subsistence. I ventured to renew his authority monthly, and the Indians have been well fed since that time. It will be seen by Agent Piper's report that the number has increased 670 within the year. On the 1st of May Agent Piper removed his agency from Paraje to Cañada Alamosa, where he could be near the Indians, and by issuing rations once a week, (instead of twice a month as before,) he could be better able to keep them in hand, and to know when they were absent.

On the 8th of March, 1871, I was directed by the honorable Commissioner to invite the chief Cochise, and such other chief as I might deem to be a proper person, on account of his influence among that tribe, to visit Washington, for the purpose of conferring with the Department, &c., and at once directed Agent Piper to send a party of messengers to communicate with Cochise. The party sent out by Agent Piper on the 6th of April, under José Trujillo, returned on the 18th, without finding any trace of Cochise or his people. I met this party at Cañada Alamosa on their return; and on the 26th April I sent another party, under José Trujillo, with instructions to find Cochise if he was alive, and to bring him and his band to Cañada Alamosa. This party returned on the 21st May, having found the camp and the family of Cochise in Arizona,

about one hundred and sixty miles west from Cañada Alamosa. (It is impossible to fix the locality of this camp with any degree of certainty, as the messengers knew little or nothing of the geography of the country.) Cochise, with a few warriors, was absent on a scout in Sonora, and the Indians in the camp were nearly naked, half-starved, and badly frightened. The messengers returned bringing all the Indians at the camp, (except the family of Cochise,) numbering over 100 men, women and children, and including three captains of Cochise's band.

On the 7th of June I sent another party in charge of Thomas J. Jeffords, with the same instructions that had been given José Trujillo. This party returned on the 26th or 27th of June; Mr. Jeffords reported that he had found Cochise on the 16th of June in a spur of the Dragoon Mountains—a range running parallel with and joining the Chi-ri-cua-hui Mountains south of the Gila river, in Arizona. Cochise is reported to have said, in reply to the messages I sent him, that he desired peace, but was afraid to venture to take his women and children to Cañada Alamosa at present, on account of the numerous scouting parties of troops and citizens in Arizona and New Mexico, and that he would not go without his people, &c. I was disposed to credit the main facts as stated by Mr. Jeffords, but subsequent events and information have compelled me to regard his report as doubtful. On the 31st of July another party was sent out under José Trujillo, by my direction, to communicate with Cochise, and to endeavor to persuade him and his band to come to Cañada Alamosa. These messengers returned on the 21st of August, having been turned back by General Crook, who was in the field in command of about 400 cavalry near Camp Apache, Arizona Territory. The Hon. Vincent Colyer, of the Board of Indian Commissioners, arrived about this time with enlarged powers upon the whole subject, and parties have been sent out, by his direction, from Zúñi and Cañada Alamosa, to communicate with all hostile bands of Apaches.

The duties at this important agency have been arduous during the past year, owing to the various causes that have operated against the successful control of the Indians. The agency has incurred the enmity of the citizens of Southern New Mexico, and those Indians are accused of having committed most of the depredations in that section. While I am free to admit that too many of the complaints made by citizens are warranted by facts, yet I am satisfied, from what I have learned in conversation with reliable parties, that very many of the depredations charged to these Indians, in the absence of proof to the contrary, have been committed by others than Indians. However this may be, the citizens have been very much excited and exasperated, and have threatened to attack the Indians of this agency. I have therefore directed the agent to call for troops, should he consider it advisable, to prevent any such unlawful act, and also to assist him in taking stolen property that might be brought to his reservation, and in securing the thieves for punishment. Every effort has been, and will be, made to secure justice to the citizens when it is sought in a lawful manner.

In the latter part of August I accompanied Commissioner Colyer to the Tularosa Valley, west of the Rio Grande, which valley he has declared to be an Indian reservation for the Indians at present located at Cañada Alamosa, and other roving bands of Apache Indians. The reservation commences at the head-waters of the Tularosa River and its tributaries, in the mountains, and extends down the same ten miles on each side for a distance of thirty miles, and embraces some of the best timber and farming lands in the Territory. Agent Piper has been directed to remove his agency and the Indians under his charge to that

valley at once, and the commanding officer of this district has been requested to furnish a sufficient military force for the protection of the agency, &c.

The appropriation of \$70,000 for collecting and subsisting the Apaches of New Mexico and Arizona is entirely too small. According to the reports of Agents Piper and Curtis, there are about 1,700 Apaches already located in New Mexico. The cost of simply feeding these 1,700, leaving out the expense of clothing and other necessary articles for them, will be more than \$6,000 per month, and in a year would exceed the appropriation for all the Apaches of this and Arizona Territory. In Arizona the number of Apaches will, no doubt, be as great as that of this superintendency, and I suggest and respectfully urge that Congress be asked to make an additional appropriation of at least \$125,000 for the year ending on the 30th of June, 1872. This amount is fixed after a careful consideration of the expense of collecting, feeding, and supplying the Apaches with necessary articles of clothing, &c., and I trust it will not be considered unreasonable.

#### MESCALERO APACHE AGENCY.

This agency includes the Mescalero Apache Indians, numbering at present between 500 and 600 souls, and is located at Fort Stanton, in the southeastern portion of the Territory. In the fall of 1865 these Indians left the Bosque Redondo (or Fort Sumner) reservation, on account of differences with the Navajoes, and have been at war since that time. In October last Captain Chambers McKibbin, Fifteenth Infantry, United States Army, then commanding the post of Fort Stanton, captured two Mescalero women, who were sent to communicate with the balance of the tribe. In February of this year a small party visited Fort Stanton under José La Paz, a sub-chief, who stated that the whole tribe desired peace. General A. V. Kautz, lieutenant colonel Fifteenth Infantry, United States Army, commanding Fort Stanton, at once sent La Paz out to the Comanche country to bring in the Mescaleros, and to assure them that they would receive care and protection. La Paz returned to Fort Stanton on the 12th of April, and reported that his people were much pleased at the prospect of peace, and would come in as soon as the grass was sufficiently advanced to allow their animals to cross the "Staked Plains."

I visited Fort Stanton in June last, accompanied by Mr. A. J. Curtis, the newly-appointed agent for these Indians, and met about 30 Mescaleros, who had just arrived in advance of the main body. At the present time there are between 500 and 600 Indians at Fort Stanton, and peace is established with the Mescaleros, owing to good management on the part of the commanding officer of that post and the persistent efforts of Hon. L. G. Murphy and Major Emil Fritz, citizens of Lincoln County. These Indians are being supplied with beef and corn temporarily, at the contract rates for those articles at that post, and during this fall a permanent reservation will be selected in the vicinity of the post. I have not yet received the annual report of Agent Curtis.

#### PUEBLO AGENCY.

These Indians number about 7,683 souls, and occupy 19 villages in different portions of the Territory. The reports of former superintendents and agents leave little to be said in praise of these people, and I will simply characterize them as law-abiding, industrious, and self-sustaining.

For a long time past the young men from the several villages have been in the habit of trading with the Comanches, and I have found it difficult to prevent it. In January last I sent a copy of General Sheridan's Order No. 6, in regard to trading with the Comanches, to each village, with a request that the governor and principal men would use their influence and authority to prevent parties from going to trade, but the more venturesome continued to go secretly, at times, until a party of about 20, from the village of Isleta, were captured in May, near Fort Bascom, by Major A. P. Caraher, Eighth Cavalry, United States Army, having a large number of Texas cattle with them. The Indians were turned over to the civil authorities, and through the assistance of their agent were enabled to give bonds for their appearance when called upon to answer for the offense. This lesson has had a good effect, and I trust this illegal traffic will soon cease.

A vexed question in this superintendency is, whether or not the Pueblo Indians are citizens of the United States; and, at different times, complaints have been made to this office, by the Indians, in effect that they cannot live peaceably with whites who have settled on their lands. They complain (and not without reason) that injustice is done them frequently, and especially in all matters of law. In several of their villages the greater portion of the inhabitants are Mexicans, who elect their own alcalde and other officers, and insist upon controlling the affairs of the village; whereas it is a custom of the Indians, in each village, to choose from their number a governor, lieutenant governor, war captain, and an assistant, to serve for one year, whose duty it is to consult with their agent and superintendent in the management of the affairs of the village. In consequence of this conflict of authority, differences often arise, and street fights are not uncommon. The question of citizenship also involves that of the right of these Indians to dispose of their lands. According to the report of Agent Arny there are, at present, 5,543 persons other than Indians residing in the 19 villages, and the total value of the lands claimed by them is \$434,677. For a very long time the Mexicans and their ancestors have occupied these lands, which have been purchased, in the majority of cases, in good faith, and the Government could neither afford to buy their lands nor do them injustice by forcing them to relinquish their titles.

This matter is growing more complicated every year, and if some decision is not obtained it resolves itself into the question of how much time will be required to crowd the Indians out altogether. Attention is invited to the remarks of Agent Arny in relation to this subject.

During last spring and summer there was serious trouble at several villages on account of religion, but I believe an amicable settlement has been effected by the agent.

These Indians have become much interested in schools, and the subject of education is an important one. I invite attention to Agent Arny's suggestions, and his requests for an appropriation of \$10,000, to be expended pro rata in the 19 villages for the furnishing of benches, desks, blackboards, school-books, and other facilities for the schools, and \$5,000 to be expended in the purchase of the necessary implements, seeds, &c., for the establishment of a model and experimental farm in each village, on which the children should be taught practical farming, in addition to their regular studies. These estimates are moderate, and I hope they will be considered.

For other information regarding the ancient history, superstitions, habits, religion, and present condition of these people, your attention is called to the exhaustive report of Agent Arny.

## GENERAL REMARKS.

I relieved Major William Clinton, United States Army, as superintendent on the 30th of November, 1870, and found the different tribes of Indians belonging to the superintendency (except the Pueblos) very much dissatisfied and unsettled, for various reasons. The Navajoes had failed to raise crops last year, and were entirely out of subsistence. The Southern Apaches at Cañada Alamosa had been waiting for nearly two years to be noticed by the Government, and no adequate provision had been made for them. The Indians of the Abiquiu and Cimarron agencies (except the Jicarilla Apaches at Cimarron) were considered parties to the Ute treaty of the 2d of March, 1868, although they had frequently and persistently protested against the fraud that had been practiced upon the tribe by a few unauthorized Indians who assumed to represent them in signing that treaty, nothing but legislation by Congress could relieve them, and that legislation having been delayed, the Department has been unable to otherwise provide for their maintenance. Major Clinton, the former superintendent, was powerless to act for want of authority and could give no positive assurances of aid, and numerous complaints were made by citizens (not without reason in the majority of cases) of the frequent depredations committed by these Indians. Owing to good management, however, by the agents, and the favorable and prompt attention given by the Department to statements of the critical condition of affairs, and requisitions for funds, I am glad to be able to testify as to the gradual and steady improvement in the condition of Indian affairs generally throughout the superintendency. In evidence of this I invite careful attention to the accompanying reports of the several agents, and would state that during the past year about forty-five horses, fifteen mules, two hundred head of sheep, ten head of cattle, besides a number of "burros," have been recovered by the chiefs from thieves among the different tribes, and have been returned to the proper owners by the agents; ten horses not claimed were sold at public auction to pay expenses of feeding and advertising, and a few are still unclaimed at the Navajo agency.

I would also refer to the facts that over 1,000 Apaches have come in during the last eight months, and that depredations by Indians and complaints by citizens are less frequent than formerly.

I would again call the attention of the Department to the urgent necessity of asking Congress to make the appropriations required for the Navajoes, Southern Apaches, and Pueblos, and to relieve the Utes of this superintendency from the consequences of their refusal to recognize the Ute treaty of 1868, and make other provision for them. The three bands of Utes in this Territory number about 1,500 souls, and will require for one year's subsistence and necessary clothing at least \$60,000, and if the Jicarilla Apaches (numbering 864 souls) are not removed to Fort Stanton, this amount should be increased to \$85,000. I would also suggest that an appropriation of \$150,000 be asked for to erect suitable buildings for agents' quarters, office, store-house, house for teacher, physician, farmer, blacksmith, carpenter, and interpreter; also stable and corral at each of the following agencies: Navajo, Southern Apache, Mescalero Apache, Abiquiu, Cimarron, and Pueblo. Estimates of the cost of these buildings will be found in the reports of the agents. This amount of \$150,000 includes the cost of erecting buildings for superintendents' offices, council-house, stable, and corral at Santa Fé. The buildings at present occupied and rented by the Indian Department at the different agencies are totally unfitted for the uses to which they are

put, and the saving of expense in rents, and the loss and damage of Government property, seem to be good and sufficient reasons for urging that authority be given for the erection of these buildings as a matter of economy, aside from the considerations of comfort and convenience. I would also suggest that an appropriation of \$20,000 be asked for, to be expended by the honorable Commissioner of Indian Affairs in the purchase of agricultural implements, seeds, &c., for such of the Indians of this superintendency as may be persuaded to take an interest in farming. These appropriations are in addition to the amount required to defray the incidental expenses of the superintendency and agencies.

On the 14th of August I was requested by Commissioner Colyer to issue a limited quantity of subsistence and clothing to the Coyotero Apaches, located at Camp Apache, Arizona, as it was a case of urgent necessity, and there was no time to communicate with the superintendent of Indian affairs for that Territory; besides, it was thought to be cheaper to supply those Indians from New Mexico. I accordingly, at the suggestion of Commissioner Colyer, directed Agent Arny of the Pueblo agency to proceed to Camp Apache and to make the necessary arrangements for supplying those Indians with subsistence and clothing to the amount of \$2,000.

The Indians of this superintendency, with the exception of the Pueblos and, perhaps, the Navajoes, are in a very wild and unsettled state, and any attempt at this time to control them by moral suasion alone would be insane and fruitless. What seems to be required for the present is a system of laws or regulations based upon ideas of humanity and simple justice, that might be passed by Congress especially for the government of Indians located upon reservations; providing punishment for crimes; compelling the Indians to work for their food and clothing; investing the agent with the authority of a justice of the peace, and placing troops at his disposal to aid him in maintaining the laws, &c. But the wild Indians must first be placed upon permanent reservations and kept there, even if it should be necessary to post a line of sentinels around them. Then a form of government similar to the one mentioned, administered mildly but firmly, would have a tendency to develop, in time, the natural ideas of justice and human nature common to all Indians, and there is reason to believe they might be brought gradually to a mental and moral condition that could be further improved by proper teachings.

The Southern Apaches are probably the wildest and most troublesome Indians on the continent, but I am encouraged to think they can and will be collected and controlled; and it is my firm belief, based upon more or less observation and experience, that the quickest, surest, cheapest, and the only plan to secure peace with them, and to prevent the further shedding of innocent blood, is that of fixing reservations; giving them an opportunity to go to those reservations, and by taking proper measures to *keep* them there with troops. If any refused or failed to take advantage of the kind offers made to them, it would seem to be a part of the peace policy of the administration and an act of humanity to force them to be at peace.

For many years past a species of warfare has been waged against the Apaches, and peace has not been established by that means, and, judging from the past, it is fair to presume that many years more of such warfare would fail to produce any favorable or definite results, while in the mean time hundreds of innocent people would suffer in retaliation for Indians killed, no matter how justly, and the "Indian question" will

be finally settled by collecting the Indians and *keeping* them upon reservations.

It is a well-known fact that the Government has had no well defined or general policy regarding the management of Indians, until within the past two or three years, and an unanswerable argument in favor of the continuance of the present policy is the noticeable and acknowledged improvement in the condition of Indians and their affairs generally, and there can be no question as to its final success in this section—provided the Indians are dealt with practically, liberally, justly and firmly.

In conclusion I desire to say that great credit is due the several agents attached to this superintendency for the able and discreet management of the affairs of their agencies, and I commend their accompanying reports to the favorable consideration of the Department.

With much respect, your obedient servant,

NATHANIEL POPE,

*Superintendent of Indian Affairs for New Mexico.*

The Hon. COMMITTEE ON INDIAN AFFAIRS,

*Washington, D. C.*

# No. 35.

DEFIANCE, NAVAJO AGENCY,

*August 29, 1871.*

SIR: In compliance with the request of James H. Miller, agent for the Navajoes, I have the honor to submit the following report for the school year ending June 23, 1871.

This school has been kept nine months, in three terms of twelve weeks each, as follows:

School opened August 15, 1870. First term closed November 4, 1870. Whole number in attendance, 35; daily average, 16. Second term closed January 27, 1871; daily attendance much better than during the first quarter; average, 20 per day. Third and last term commenced April 3, 1871, and closed June 23; 40 pupils in attendance; daily average, 24.

The above will show that there has been a steady advance in regard to attendance.

The instructions are given in the English language so far as is possible. Of necessity the teachers must use their own language as a medium by which to make them understand what the words mean in order to be understood by them.

Lessons are given in the English alphabet and its sounds, in orthography, reading, writing, and printing on the slate and blackboard. Also in mental arithmetic.

Their capacity for numbers seems to be very good; and they acquire a knowledge of the English language readily. But owing to their going from place to place so often they are much of the time absent from school.

Knitting and sewing are taught in the school also. During the year 24 dresses, 33 shirts, and 4 sacques have been made. Besides some knitting and other sewing has been done during the winter term.

Some of the scholars sew neatly that did not know anything about sewing when they came to school first.

The purpose for which the school is kept seems to be better understood; and the desire for schools growing among the people.

Expect to open the school again September 4, 1871. Think on the whole there is reason for encouragement in view of the school work.

Hope we may at least have a second school opened during the coming year.

Most respectfully submitted.

CHARITY A. G. MENAUL.

Colonel NATHANIEL POPE,  
*Superintendent of Indian Affairs, New Mexico.*

---

No. 36.

UNITED STATES NAVAJO INDIAN AGENCY,  
*Fort Defiance, New Mexico, August 17, 1871.*

SIR: In accordance with instructions from the Indian Department, I have the honor to submit this my first annual report.

I relieved Captain F. T. Bennett, United States Army, and took charge of this agency on the 3d day of February of the present year, under the most unfavorable circumstances. Though my predecessor rendered me every assistance in his power, there were difficulties to surmount which I had not the means at hand to overcome. The annuity goods of the previous year, as well as all the beef and corn on hand, had been issued. The Indians had failed to raise a crop from the soil during the past season, and this, together with the fact that no appropriation had yet been made to feed them, made the prospect for the future look dark. It was not until the 26th day of February that I had any means to pacify the Indians, during which time numbers of them went off the reservation and committed depredations on citizens, stealing, and running off horses, sheep, and cattle.

On the 26th of February, I received 11,785 pounds of corn from Captain E. B. Grimes, assistant quartermaster, Fort Wingate, New Mexico, and 38,610 pounds on the 10th day of March, from the same place. These amounts were furnished through the influence of Colonel Nathaniel Pope, superintendent of Indian affairs, as a loan, to be returned when provisions would be made for the Navajoes. I also received 49,650 pounds of beef from the superintendent of Indian affairs on the 1st day of March. By these means I was enabled to keep the Indians comparatively quiet until the appropriation had been made and corn and beef furnished. Still, however, reports of thefts came to me as late as the 1st of May. I called a council of the chiefs and head-men on the 26th of April, asked them to assist me in getting back the stolen stock, and also to bring the offenders to justice, telling them at the same time if they did not succeed that I would call on the military to assist me in arresting the thieves and taking the stock by force. They promised to do what they could, and at once set to work, but failed to accomplish anything except to bring in a few animals. I then requested Major William Redwood Price, commanding Fort Wingate, to come to my assistance with two companies of cavalry, which he did on the 11th day of May; and by careful management we succeeded in getting the Indians to give up two of the thieves and quite a number of animals. I fully explained to the chiefs the object of the arrest, and they expressed themselves much pleased.

Having no place of confinement here, I turned the prisoners over to the military, and they were sent to Santa Fé, where they were held for some time, then turned over to the superintendent of Indian affairs, and finally filed off their shackles and made their escape. Though they were never brought to trial, the arrest has had a good effect on the balance of the tribe, as I have not heard of a single theft being committed since. How long this state of affairs may last remains to be seen. I would, however, recommend, as my predecessor has done, that a special police force of from fifty to one hundred be organized of the best men of the tribe, to be armed, clothed, and paid by the Government, and made subject to the orders of the agent, who could send them whenever necessary to any part of the reservation to settle difficulties; and in case a stronger force should be required they could act with the military, and be a great aid on account of their knowledge of the country.

#### THE AGENCY, WHERE SITUATED, AND CONDITION.

This agency is situated at the east end of Cañon Bonita, about fifty miles northwest of Fort Wingate. The buildings are adobe, and are the remains of an old abandoned military post. These buildings were badly worn before the troops left them, and the wood-work afterward partly burned by the Indians. The foundations of some of the buildings are giving way and the walls of others are badly broken, while the roofs of some are only kept from falling in by propping them up. All the rooms are without floors and very poorly lighted. They are in constant need of repair. I would here remark that, if it is the intention of the Government to keep up this agency, it would be much cheaper to put up new and substantial buildings, than to keep the old ones in repair, for the reason that the money expended in repairing the old ones would soon amount to more than the cost of new.

A house with two rooms, for office and council-room, is indispensable. The place now occupied for an office is in bad repair, and there is no council-room at all, in consequence of which the chiefs have several times expressed themselves very much dissatisfied, and the only way I could pacify them was to give them part of the agency building to stay in when it was necessary for them to stay at the agency over night, which makes it very unpleasant. There never has been a chapel and school-house erected, as agreed to in Article III of the treaty, neither is there any building fit for such purpose.

The stables are in very bad condition, and the corrals are unsafe. The probable cost of new buildings for agency, employés, stable, corral for public animals, and count-corral, &c., would not be less than thirty or thirty-five thousand dollars, as per estimate sent herewith.

#### THE RESERVATION AND QUALITY OF LAND.

The reservation embraces about six thousand one hundred and twenty square miles, or 3,916,800 acres. I have traveled over about one-third of this; and find it very mountainous and broken, much of it is high table-land, destitute of water, and, from what I have heard of other parts, I should judge there is not an average of more than one acre out of fifty susceptible of cultivation. There are large forests of good pine timber, which, if mills were furnished to saw, would supply the tribe with lumber for all time to come; and in this connection I would say that in case of putting up new buildings at this place and school-houses in different parts of the reservation, it would be a matter of

economy for the Government to furnish at least one saw-mill, as lumber is by no means the least expensive article to be found in this country, costing, delivered at this place, not less than \$100 per thousand feet.

#### SCHOOLS.

The Indians should have more schools. I am of the opinion that the kind best adapted for their advancement and civilization would be those conducted on the industrial or manual-labor plan. There should be a farm connected with each school, and the boys should be required to work a portion of the time on the farm, and spend the balance in school. While the boys are engaged in out-door labor, the girls could be employed in sewing or house-work ; but in order to make this a success it would be necessary to have the parents settle near the school, so that they would not be too far separated from their children. It would also be necessary to clothe and feed the children, and, for a time at least, to give them small presents occasionally, as rewards, to encourage them in learning. These rewards, if thought best, could be retained from the annuity goods and thus make no additional expense.

There has been one day-school in operation at this agency for some-time, conducted by Mrs. C. A. Menaul, (formerly Miss Gaston,) which has been well attended, the scholars making rapid progress, considering the difficulty they have in pronouncing our language. The teacher has been receiving a salary of \$600 per annum, but owing to the high price of provisions, clothing, &c., this amount is entirely too small; I would, therefore, recommend the salary of teachers be raised to \$1,000 per annum.

#### FARMING.

It is impossible for me to give anything like a correct statement of the number of acres under cultivation, or the amount planted, from the fact that the Indians are so scattered over the reservation ; but the chiefs and principal men have told me that their people have worked harder, and planted more this year, than they have ever done since coming on the reservation, and from what I have seen myself, I feel like giving full credit to their statement.

For a time after planting they expressed strong hopes that they would raise sufficient corn for their support ; but their usual trouble, dry weather and scarcity of water for irrigation, set in, which, of itself, would have made almost a total failure ; and to make the matter worse, the fall frosts have already set in, which destroys all hopes of a crop, and the Government will be compelled to feed them to keep them from stealing, for they are Indians, and will steal before they will starve. In view of this, and repeated failures in the crops, I am of the opinion that these people never can be made self-sustaining by tilling the soil alone. I would, therefore, urge the propriety of the Government purchasing sheep for a greater part of next year's annuities instead of goods. The Indians would thus, at the same time, be provided with the means of supplying themselves with food and raiment without additional expense. Besides, they attach but little value to the goods they get, and in nine cases out of ten go and trade them for sheep at less than half their cost. I have talked to the chiefs on this subject, and their universal cry is, give us sheep. The sheep they have already received from the Government are rapidly increasing, numbering now about 30,000.

I might here remark, if it is designed to furnish them any more seeds, none but those that will mature in the shortest possible period should

be given them, as the altitude of their country is so great that they cannot count on more than sixty days without frost, and giving them seeds of any kind of vegetables of long growth would be a useless expenditure of money. They have about 8,000 horses and a few cattle.

#### MISSION AND MISSIONARY WORK.

I found Rev. I. M. Roberts and Rev. John Menaul, missionaries of the Presbyterian board, at this place, when I took charge. They have thus far been unable to accomplish much, partly on account of the prejudice of the Indians, and partly owing to the great difficulty in getting the language; my own opinion is that the only hope of Christianizing these people is in the children, and that missionaries will be most successful, acting in the capacity of teachers in schools.

#### SUPERSTITION OF THE INDIANS.

It will be the work of years to get these Indians to live in houses, owing to their superstition in regard to the dead. When a member of the family dies, in most cases they immediately leave their hogan (or wigwam) with the dead body in it, and can never be induced to enter it again.

#### HEALTH.

There are still numbers of Indians suffering from disease said to be contracted while at the Bosque Rodondo; otherwise the health of the nation is good, being few deaths reported during the year. Among the deaths reported were Barboncito and Armigo, two of the principal chiefs. Barboncito died on the 16th day of March, and Armigo on the 5th of June.

#### DIFFICULTIES WITH MOQUIS AND ZUÑIS.

With the aid of Agent Crowthers, of the Moquis, and Agent Arny, of the Pueblos, I have been enabled to make an amicable settlement of a quarrel with each of these tribes, both growing out of the killing of Navajoes, and, as near as I am able to report at present, these Indians are at peace with all the surrounding tribes except the Apaches, with which people they say they never wish to be friendly.

#### NUMBER OF INDIANS.

I have had no general count owing to the fact that the annuity goods have not yet arrived, in consequence of which I give the last count of Captain F. T. Bennett, which was 8,234. I issued the rations, farming implements, and seeds on the tickets that were out when I took charge, but will have a count and issue new tickets as soon as the annuities arrive.

There is yet one point to which I wish to call the attention of the Department. The labor at this agency is too great for one man. While I have taken advantage of every opportunity to become acquainted with the people and their wants, as well as their country, I found it impossible to be absent from the agency for any length of time, my presence being constantly needed here. I would, therefore, recommend the appointment of a special agent, who could visit all parts of the reservation and look after the interests of the Indians at home, and also attend to

the settlement of claims the Indians have against citizens outside of the reservation. The pay he might receive would be a small item in comparison with the benefit the services would be to the Indians as well as the Government.

I would here state that my predecessor had an assistant, and it is reasonable to suppose the duties are as arduous now as then.

In conclusion I would say that I have endeavored to make an impartial and truthful report, both from a sense of duty to the Government and also the Indians, believing, as I do, that what will most rapidly advance and civilize the Indians is least expensive to the Government.

Hoping this report may receive the favorable consideration of yourself and the honorable Commissioner of Indian Affairs, I am, most respectfully, your obedient servant,

JAMES H. MILLER,  
*Agent for Navajos.*

Colonel NATHANIEL POPE,  
*Superintendent of Indian Affairs, Santa Fé, New Mexico.*

---

No. 37.

PUEBLO INDIAN AGENCY,  
*Abiqui, Rio Arriba County, New Mexico, August 18, 1871.*

SIR: In obedience to the requirements of the Department, I have the honor to submit this, my annual report, in reference to the Pueblo Indians of New Mexico, for the present year, during which it became necessary for me to visit every one of the nineteen villages twice, and which gave me the opportunity of becoming well informed in regard to their history, condition, and wants.

An acquaintance and experience with these Indians for more than ten years, and an examination of the old documents which were in the archives of this Territory when I was secretary and acting governor of New Mexico, with various conversations I have had with their old men, furnished me with the opportunity of comparing the old Spanish history of these interesting people with the traditions that exist among them, and thus to come to a correct knowledge of their origin, and other details of their habits, manners, customs, religion, &c. These Indians live in villages, are self-sustaining, and, in some respects, improving. Their numbers and full statistics will be found in the three tabular statements marked A, B, and C. They are evidently the descendants of the Aztec population who occupied this country previous to its discovery by the Spaniards. Their prophet, priest, and king is Montezuma.

Alvar Nunez Calbeza de Baca sailed in 1527; he was in New Mexico, and gave an account of the country; and in writing of these Indian villages he said: "The New Mexico pueblos\*—stories high, with doors on the roof and the staircase ladders on the outside." This, and the additional fact that, in a circle of sixty miles from Santa Fé, there are to be found the ruins of over forty deserted towns, and in various other portions of New Mexico and Arizona similar ruins are in existence, all show that these Indians were formerly a powerful people, and corroborates the statement found in the old Spanish records of "Montezuma having gone from his birthplace near Santa Fé to Moqui, when

---

\* Pueblo, in English, means village.

on his way to Old Mexico;" and the additional fact that the people of "Tanos," one of the Moqui villages, at present speak the Tegua language, which is also spoken by several of the New Mexican Pueblo Indians, leave but little doubt as to the common origin of all the village Indians of this country and Old Mexico. The question as to whether the Pueblo Indians were found living in towns, or were thus settled by the early conquerors, is clearly determined by Cabeza de Baca and Coronades, who are the earliest authorities upon the history of this country. They found these Indians living in towns, many of which were described by them as cities. At the time of the first revolution against Spanish rule by the Indians, some of these towns were destroyed; some of these were rebuilt on new sites; these were the only towns whose settlements were after the date of the conquest. From Castanada's description, in 1840, they were found living in towns, and in a prosperous condition, and so far as the decree of the Emperor of Spain, Charles V, dated at Cigales, March 21, 1551, is concerned, as Dr. M. Steck, (who, while in New Mexico, took great interest in these Indians,) says, "it was a royal decree, designed to protect the Pueblo Indians, and to provide for the settlement of others not at that time living in towns."\* And to which I add, that this decree was evidently made to protect the rights of the Indians against encroachment and imposition, as were also other old Spanish laws which are still extant, and which provide that the Spaniards shall not encroach upon the lands granted to these Indians.

Previous to 1583 the Pueblo Indians rebelled against the Spanish rule, as alluded to above, and drove from the country the priests of the Roman Catholic Church; and there is, or was, in the Peter Force library, a Spanish book, which gave an account of an expedition by Espejo in that year, in which a portion of New Mexico was again conquered, and these Indians compelled to work in the mines. In 1680 the village Indians (Pueblos) rebelled for the second time against the Spaniards, and the records show "they had been whipped and scourged because they would not bow down and worship the unknown god of the Spaniards; and being compelled to dig the precious metals from the bowels of the earth to satisfy the avarice of their tyrants, they thirsted for vengeance; they drove the Spaniards and priests from their country, and again established their own government and religious worship."

In 1692 the Spaniards succeeded in reconquering New Mexico, and retook Santa Fé. W. W. H. Davis says, in his work entitled "The Conquest of Mexico:" "With the fall of that city the Pueblos in the vicinity, twelve in number, made submission, and were visited and taken possession of in the name of the King of Spain, as was the custom in those days with the Spanish conquerors all over the world. As soon as the Pueblos had been brought under military subjection, they were delivered over to the pious zeal of the priests, for the purpose of being reduced to spiritual obedience."

From that period to the present great zeal has been manifested by the Roman Catholic Church in New Mexico to induce these Indians to to adopt the rites and ceremonies of that Church; but I have to say, in the language of Mr. John Ward, that "there is every reason to believe that the Pueblos still adhere to their native belief and ancient rites."† That most of them have faith in Montezuma is beyond a doubt, but in

\* This decree contained the statement that, "by an order of the Emperor, given in 1546, the prelates of New Spain, convened for the purpose, had resolved that the Indians should be brought to settle, (reduced to pueblos,) and that they should not live divided and separated by mountains, hills, &c."

† Some of these rites are too horrible for our credibility, hence I will not describe them.

what light it is difficult to say, as they seldom speak of him, and avoid conversations on the subject; like other people, they do not like to be questioned on subjects which they believe to concern none but themselves.

One thing is certain to my mind, from personal observations—that these Indians still cling to their old worship to some extent, and object to the Catholic Church on account of the amount of tithes and stipends they are required to pay to the clergy for their religious services; and because they continue to desire to worship the sun, and look for Montezuma's return. It is stated by some that the Montezuma of the Pueblo Indians is not the Montezuma of the Conquest, but an agent of the Spanish government, chosen to protect the rights and interests of the Pueblo Indians. Be this as it may, it is very certain that this view of the subject differs entirely from that of the Indians. They believe to this day that Montezuma originated in New Mexico, and some go so far as to designate his birthplace. In this they differ, however, some affirming that he was born at the old pueblo of Pecos, and others, that his birthplace was an old pueblo located near "Ojo Caliente," the ruins of which are still to be seen not twenty miles from where I am now seated writing this report. It is supposed, too, that Montezuma was not the original name of this demi-god, but a name bestowed upon him after he had proved the divinity of his mission.

A document is now extant purporting to be copied from one of the legends at the capital of Mexico, in which it is stated that Montezuma was born in Teguayo, one of the ancient pueblos of New Mexico, in the year 1538. This account makes him out more of a prophet than anything else. He foretold events that actually came to pass, and it is related of him that he performed many wonderful things. From all I have been able to learn, I am fully convinced that the Montezuma who was held in such reverence by the Pueblo Indians of New Mexico and Arizona was a descendant of the Montezumas (kings of Mexico) who were looked upon both as kings and priests, subordinate only to the "Great Spirit," whom they believed to be represented by "the sun, the great orb of day, and the representative of light and heat; hence they kept burning upon their altars in the 'estufas' (places of worship) fire, the earthly representative of that light and heat imparted by the sun;" and I have reason to believe that to this day these edifices are used for this purpose. During the last two years I have visited all the pueblos (Indian towns) now in existence, and also the ruins of many which have been abandoned in New Mexico, a number west of the Rio Grande. These ruins, now totally uninhabited, indicate that in former years they were occupied by a large and industrious population, who in intelligence must have been far in advance of the present Indians of this country. The most interesting of these abandoned pueblos that I have seen are the Pecos pueblo, located twenty-five miles east of Santa Fé; the Ojo Caliente, a pueblo located near a wonderful hot spring in Rio Arriba County, and various others in the Cañon de Chelly, and in what I called Peach Orchard Cañon, tributaries of the great cañon of the Colorado River. All these ruins indicate that in former days these ruined villages were inhabited by a numerous and powerful race of people.

#### LANGUAGE.

There are five different dialects spoken by the Indians of the nineteen villages of New Mexico which belong to this superintendency, namely:

1st. The Red Willow Indians of Taos, Picuris, Sandilla, and Isleta speak the same dialect.

2d. San Juan, Santa Clara, San Ildefonso, Nambé, Poujuaque, and Tesuque, another.

3d. Cochit , Santo Domingo, San Felipe, Santa A a, Zia, Laguna, and Acoma, another.

4th and 5th. The dialects spoken severally by Jemes and Zu i.

#### AGRICULTURE.

These Indians cultivate the soil in the rudest manner, and raise corn, wheat, beans, chili, pumpkins, melons, &c. This year, although water for irrigation has been very scarce, their crops promise an abundance sufficient to supply their wants and to have some to sell. Several of the villages have good orchards of peaches, apples, apricots, plums, and pears; and Isleta has fine vineyards. It is, however, impossible to obtain detailed statistics of what they raise each year, as they have no idea of an acre of land, or of bushels or pounds. They also have cattle, sheep, and goats, from which they obtain milk and meat for food, and wool to manufacture clothing and blankets.

On the lands granted to these Indians for reservations there are many citizens residing and farming the lands, in some cases without the consent of the Indians; they not only use their lands, but also deprive the Indians of the water to which they are entitled for irrigation, and which is essentially necessary to the cultivation of their crops. The settlement of the controversies arising from this source renders the agency for these Indians no sinecure; for to do his duty and see that injustice is not done to the Indians, the agent must be almost constantly employed; and that you may perfectly understand the condition of the Indians and their lands, it becomes necessary that I should mention each village separately and in detail, and show the number of Indians and citizens residing on each reservation, with the value of their property, so far as it could be ascertained.

#### A.—JEMES PUEBLO.

This village contains 344 inhabitants, of which only four persons can read and write; 138 are children; their reservation contains 17,510.45 acres of land, which is surveyed, and a grant given to them with a patent from the United States Government. No citizens reside on the lands of this pueblo, but several are working land belonging to the Indians, contrary to their expressed wish, and I have adopted such measures as are in my power to have justice done. These Indians desire a school, and I have employed Jos  Ma. Garcia, at \$40 per month, to teach the children of this village and of the Zia village, they being close to each other.

#### B.—ACOMA PUEBLO.

This village has a population of 436 persons, of which only one person can read and write; 154 are children; their reservation is not surveyed; they are entitled by grant to 17,712 acres, and ask that the Government make an appropriation to have it surveyed, as it did the other Pueblo reservations. In this reservation there are no citizens living; they desire schools, and ask that the children be taught in English, so that they can speak to the Great Father and his agents without interpreters. I have asked the Presbyterian Board of Missions to establish a mission for this pueblo and the adjoining one of Laguna; and to recommend

a teacher for Acoma, as a competent teacher in English cannot be obtained here for such compensation as I have the means to pay.

#### C.—SAN JUAN PUEBLO.

This village contains 426 persons, of which eight persons can read and write; there are 168 children; their lands are surveyed, and they have a patent from the Government therefor. There are 231 families of citizens living on their reservation; total men, women, and children, citizens, 1,032, of which 61 can read and write, and with property to the amount of \$62,432. The Indians of this pueblo desire a school, and I have employed Clemente Ortiz as teacher, at \$40 per month compensation. These Indians beg that some measures be adopted by the Government to stop the encroachments of citizens upon their lands.

#### D.—PICURIS PUEBLO.

This pueblo contains 127 persons, 49 of whom are children; not a soul in this village can read or write. Their land is surveyed and patented; there are on this reservation 168 families of citizens, containing 799 persons, 51 of whom can read and write, with property valued at \$43,965. I have employed Albino Chacon as teacher here, at \$40 per month.

#### E.—SAN FELIPE PUEBLO.

This pueblo contains 482 Indians, of which 168 are children; only three can read or write; one of these, Juan Garcia, I have employed as teacher, at 50 cents per month per scholar. There are no citizens living on this reservation, but a few trespassers are attempting to cultivate land, and I have arranged with them to compensate the Indians. Their lands have been surveyed and patented by the Government.

#### F.—PECOS PUEBLO.

This village has been abandoned by the Indians, and the remnant of the people, 35 persons, are living at Jemes and Santo Domingo pueblos; they borrow land from those Indians, upon which they raise sufficient for their sustenance. They called upon me a few days ago, and asked me to represent their condition and claims to the Government. They feel their dependent condition, and ask aid. They desire that the Government sell their land on the Pecos, and purchase land for them near the Jemes pueblo, where most of them now live; or that their Pecos grant, which is dated September 25, 1689, and confirmed by Congress December 22, 1858, and contains 18,763.33 acres, be declared a part of the public domain, and sold by the Government, and that, in lieu thereof, lands not to exceed 160 acres for each of the survivors be granted to them in land warrants, so that they can sell or locate them near Jemes. Several persons here have attempted to sell this grant, claiming to be agents of these Indians. I have notified the parties that they will be prosecuted to the full extent of the law if they continue to represent themselves as agents of these Indians.

Mr. Davis, in his work "Conquest of Mexico," in writing of the Pecos pueblo, says:

Many curious tales are related of the superstitious customs of the Pueblos, among which is the following, told of the Pecos Indians. It is said that Montezuma kindled a sacred fire in the estufa of that pueblo, and commanded that it should be kept burning until he came back to deliver them from the Spaniards. He was expected to

appear with the rising sun, and every morning the Indians ascended to the tops of their houses and strained their eyes looking to the east for the appearance of their deliverer and king. The task of watching the sacred fire was assigned to the warriors, who served by turns for two days and two nights, without eating or drinking, and some say that they remained on duty until death or exhaustion relieved them. The remains of those who died from the effects of watching are said to have been carried to the den of a great serpent, which appears to have lived upon such delicacies. The tradition that the sacred fire was kept burning until the village was abandoned is generally believed by both Indians and Mexicans, but their deliverer never came, and when the fire went out—from what cause is not known—the survivors of the Pecos found new homes west of the Rio Grande.

During the period that I was acting governor of New Mexico, I was on several occasions visited at Santa Fé by a venerable Indian, who, from data he gave me, I supposed was about 90 years of age. He was a Pecos pueblo Indian, at that time living west of the Rio Grande. He corroborated (from tradition) the statement made in the extract from the "Conquest of Mexico," except that his version of it was that twelve virgins, daughters of the head-men of the tribe, were selected annually, whose duty it was to keep the fire burning; that the virgins fell asleep, and the fire went out; that these virgins were degraded by the Indians and the town deserted, believing, as they did, that the loss of the fire, with the failure of water for crops, indicated the displeasure of Montezuma so far as that pueblo was concerned. He told me that all the pueblos now, in secret, perform rites and ceremonies looking still for the return of Montezuma; and this was corroborated by our much-lamented Kit Carson, who is the only person I know of, except the Indians, who has been permitted to enter their estufas, and who witnessed on one occasion their worship, which was a dance in the estufa, around the "altar of fire."

I have visited their pueblos at the times of their great feasts, but was not permitted to enter their estufa. I, however, one night, at San Felipe, clandestinely witnessed a portion of their secret worship. One of their secret night dances is called *Tocina*, which is too horrible to write about. The outside worship was a blending of Roman Catholic ceremonies with some of their own heathen rites, the principal of which is the "Cachina," a dance, at which time they make offerings of flour, corn, and other articles. On the occasion of these great feasts I noticed that in the morning, at sunrise, they were on the house-tops, with their faces turned toward the rising sun. In behalf of the remnant of the people of the Pecos pueblo, I most respectfully ask that some immediate action be taken, so that they may be relieved from their dependence upon other pueblos, and that their lands, called the "Pecos Grant," may be sold for the benefit of settlers, and the proceeds go into the coffers of the Government, and thus give these Indians a home, and prevent designing speculators from monopolizing the lands to which the Government, the Indians, and actual settlers are entitled.

#### G.—COCHITÉ PUEBLO.

This village contains 243 persons, of which there are 97 children; only three persons can read and write. Their lands are surveyed, and they have a patent from the Government therefor; their lands contain 24,256.50 acres. A portion of the land of this pueblo is claimed to be covered by what is termed "La Mejada" grant. I have, however, personally examined the lines, and gone over the whole grant and the lands adjoining, and also examined their papers, and I find that the Cochité Indians are entitled to every acre of the land which their patent gives them. Their title from Spain and Old Mexico is older than any other; and there is

extant a law of Spain and Old Mexico which gives to the Indians any lands granted to them which may be found to be covered by any other grant; and declares, that "the Spaniard shall take unappropriated land elsewhere as an equivalent for the land claimed by the Indian."

There are living on this reservation 83 families of citizens, numbering 371 persons, of whom 30 can read and write, owning property to the amount of \$23,030. These Indians say they are willing to allow those who have lived more than five years on their reservation to remain; but they do protest against others settling, and are opposed to giving any of their land to the persons who claim to own "La Mejada" grant. I have notified the surveyor general of New Mexico, and requested him to inform me when the above grant is to be considered, so that I may appear in behalf of the Cochit  Indians.

The Indians of this pueblo desire a school, and I have employed Philip Herrera, an Indian, (who can read and write,) as teacher, to be paid fifty cents per month for each scholar in attendance at the school.

#### H.—SANTO DOMINGO PUEBLO.

This village contains 735 persons, of which there are 312 children; only 12 persons can read and write. Their lands are surveyed, and they have a patent from the Government to 74,743.11 acres of land. There are living on this reservation 24 families of citizens; total, 105 persons; property valued at \$21,030. These Indians are willing to allow the citizens now there to remain, but object to any more taking portions of their lands. I have employed Louis Montolla as teacher of the school at this pueblo; he is an intelligent Indian, and agrees to teach for 50 cents per month for each scholar.

#### I.—RED WILLOW INDIANS OF TAOS PUEBLO.

This village contains 397 Indians, of which 159 are children, none of whom can read or write. Their lands have been surveyed, and they have a patent from the Government for 17,360.55 acres. On this reservation there are 379 families of citizens, numbering 1,602 persons; 160 of whom can read and write; and they own property valued at \$206,555. I have employed Jesus Maria Ortis y Baca, as teacher for the Indian children of this pueblo, at forty dollars per month.

The Indians of this pueblo are anxious to have some arrangement made by which their lands and the right to water for irrigation shall be determined. This pueblo has given me much trouble in the settlement of their disputes with citizens, the remedy for which I will suggest in the conclusion of this report, when considering the means to be adopted to settle all the land and water controversies between the Indians under my charge and the settlers on their reservations.

#### K.—SANTA CLARA PUEBLO.

This village contains 189 Indians, of whom 82 are children. There are 11 Indians who can read and write. During last year they maintained a school at their own expense, and were delighted when I told them that the Government intended to furnish them with a teacher, and they desired a teacher who could instruct them in English. I have employed Gentry Floyd, who will teach both English and Spanish; he will be paid by the Government \$40 per month, and something additional will be paid him by the Indians. There are residing on the lands of these

Indians 93 families of citizens, containing 448 persons; 40 of whom can read and write; and they have property valued at \$17,597. These Indians consent to allow citizens who have occupied lands on their reserve for more than five years to remain, but object to others. A few weeks ago they sent for me, and I found a number of persons who had filed a declaration with the register of the land-office at Santa Fé, and were about to settle upon this reservation. I examined into the matter, and found they had no right there, and ordered them to leave, which they at once did, being satisfied that they had no right there.

#### L.—TESUQUE PUEBLO.

This village has 98 Indians in it, of whom 34 are children; but three persons can read and write in this pueblo. There are 11 families of citizens living on this reservation, comprising 41 persons; I could not obtain the value of their property; they have lived here a number of years, and the Indians consent that they may remain, but object to the settlement of any others.

I have employed John Townsend to teach the Indians of this pueblo, and the children of Ponjuaque village, which is near; he is to teach the English and Spanish languages, and give them instruction in farming, for which he is to be paid \$50 per month. These Indians have a reservation, confirmed by Congress, which contains 17,471.12 acres.

#### M.—SAN ILDEFONSO PUEBLO.

This village has 156 Indians in it, 65 children; not an Indian of this place can read or write; they are very anxious for schools. This pueblo has a grant, confirmed by Congress, and surveyed, containing 17,292.64 acres. On the lands of this pueblo there are 80 families of citizens, comprising 373 persons, 35 of whom can read and write; they own property valued at \$16,499. Considerable dispute exists between these citizens and the Indians in regard to land and water; and I had to settle in the last few months a number of controversies. The Indians are willing to let the citizens have the lands they have occupied for many years, although they have no legal title to them; and they ask me to request the Government to authorize a settlement of this matter, so that each can know what belongs to them; and especially to settle the right to the water for irrigation, which clearly belongs to the Indians, who are willing to give their surplus to the citizens; but they (the Indians) protest against the citizens depriving them of the water necessary, and also encroaching upon lands which they (the Indians) have heretofore used for cultivation and pasturage. I have employed Juan José Salazar as teacher at this pueblo, with compensation at \$40 per month.

#### N.—POUJUAQUE PUEBLO.

This village has only 32 Indians, of whom 10 are children; there are but 9 families, 10 men and 12 women, of whom two can read and write, as they say, "poco," (a little.) They have a reservation, confirmed by Congress, and a patent for 13,520.38 acres of as good land as any in New Mexico; yet they are poorer than any Pueblo Indians in this Territory; and there is but one reason for this, the encroachment of citizens upon their lands. The number of citizens on these lands is 397, of whom 30 can read and write; property worth \$11,735.

## O.—ZIA PUEBLO.

This village contains 121 Indians, of whom 30 are children; no person of these Indians can read or write. They have a reservation, confirmed by Congress, containing, as surveyed, 17,514.63 acres. There are no citizens on this reservation; for the present I have arranged with them to send a portion of their children to the school at Jemes pueblo, which is near to them.

## P.—SANDILLA PUEBLO.

There are 186 Indians belonging to this pueblo; 70 children. No Indian of this village can read or write. They have a reservation, confirmed by Congress, and a patent for 24,187.29 acres. There are but three families of citizens living at this village, numbering 10 persons, none of whom can read. Their property is valued at \$175. I have employed August Cisneros, at \$40 per month, to teach school at this village.

## Q.—ISLETA PUEBLO.

This pueblo contains 768 Indians, of whom 289 are children; and six Indians of this village can read and write. They have a reservation, confirmed by Congress and surveyed, containing 110,080.31 acres. There are but three families of citizens living at this village, numbering 12 persons, with whom the Indians are well contented. The Isleta Indians have lands which they purchased many years ago and afterward sold, about which there is some controversy with the family of Colonel I. Francisco Chavez and others, but which I hope ere long to be able to settle satisfactorily to all parties. These Indians have been accustomed to trade with the Comanches of the plains and to hunt buffalo for meat. Some months ago I forbade their going to the Comanche country. They disregarded my instructions, and a short time since 21 Indians, with a large amount of cattle and other articles, were taken by the military authorities of the United States stationed in this Territory.\* The Indians and a portion of the cattle, with other animals, were turned over to the civil authorities, and I have done all I could to have them punished, as a lesson to them and to break up this trade, which is nothing more than an encouragement to the Comanches to steal cattle from our neighboring State, Texas. The law in reference to this matter is defective, and the inefficiency and want of legal knowledge and ability of the present prosecuting officer of this Territory is such that these Indians, and many citizens who have been engaged in this and the trade of whisky and ammunition, will be allowed to go "scot free." This is much to be lamented, because the property and lives of both citizens of Texas and of New Mexico are greatly endangered by this wicked and nefarious traffic. The remedy for this is a more stringent law, and a more efficient and intelligent United States district attorney for New Mexico to enforce it. As this has been presented to the attention of the Hon. Attorney General of the United States by all the judges of the United States courts in this Territory, it is not necessary for me to say more on the subject here. I have employed at this pueblo I. B. Rogemont as teacher in English and Spanish, at \$50 per month.

---

\* These Indians informed me that the soldiers who took them prisoners took from them a good private horse, several silver-mounted bridles, saddles, and other articles, which were not turned over to the civil authorities, and which the Indians say were appropriated to their own use by the soldiers.

## E.—NAMBÉ PUEBLO.

This village contains 78 Indians, of whom 36 are children. One person only can read of all these Indians. They have a grant of a reservation, confirmed by Congress and surveyed, containing 13,586.33 acres of land. There are 29 families of citizens living on this land; total, 175 persons, of whom 9 can read and write, and these citizens have property valued at of \$8,144. I have employed Benito Romero as teacher at this village, at \$40 per month.

## S.—LAGUNA PUEBLO.

This band of Indians are located in seven villages on their reservation, principally, however, in the village of Laguna; they number 927 Indians, and have 344 children; not a person in this pueblo can read or write. They have a grant, confirmed by Congress, which entitles them to 17,712 acres of land, which has not been surveyed, on which are living 45 families of citizens. Total citizen population, 169 persons, with property valued at \$24,860. There are constant troubles arising between the citizens and Indians. I have twice visited them and endeavored to settle the controversies; but nothing can be accomplished permanently until an appropriation is made and their lands surveyed; this they asked me to beg Congress to do as soon as possible.

Another source of trouble with these Indians is their religion. There are 108 families who call themselves Protestants, and want an English teacher and a Protestant missionary; the balance, 191 families, are Roman Catholics, worshippers of the sun, who look for Montezuma to return, and necromancers, whose leader professes to swallow snakes and spit fire. I have had several interviews with them at their village, and I brought forty Indians of the leading men of each party to Santa Fé, so that they could see and talk with the Rev. Bishop Lamy, of the Roman Catholic Church, and the Rev. D. F. McFarland, who is in charge of the Presbyterian mission at Santa Fé. I am, however, sorry to say, with but little result for good. These Indians have fought with each other; they have made each other prisoners, and chained each other with heavy log-chains; they have scourged each other; and but a short time since I released a woman from what they call the "Cepo," which is constructed of logs, in which her feet were fastened, her body bent, her arms fastened by other logs, and her head inserted between two logs, with a space cut just sufficient for her neck. In this painful position she had been confined for several hours, because she differed from her persecutors and would not change her religion. I had her released, and notified the Indians that I would have them punished if they again used this horrible instrument of torture. I ascertained that the priest of this parish collected last year over \$600 of tithes in sheep, cattle, corn, wheat, &c., and the Indians of all parties complained to me that "they had to pay the priest, and that all he did was to come and *say mass*, and then leave them without any other advice or comfort." These Indians have been for more than a century, perhaps two centuries, under the care of the Catholic Church; and they are still so ignorant that not one of them, so far as I can ascertain, can read or write, and their minds are filled with superstitions.

By the request of the Protestants, (whose ignorance is such that they do not know what Protestantism is, although they claim the name,) I have employed Walter G. Marmon, at \$50 per month, as teacher, who is to instruct them in English and Spanish. I have also requested

Bishop Lamy to put a priest in charge of the Roman Catholic portion of this pueblo who will be efficient and instruct them, and I proposed to pay a teacher, so far as my funds would go, to teach them. I have also (as the bishop does not appear inclined to place an energetic priest in charge of these Indians) written to the Presbyterian Missionary Board in New York, to whom the Indian missions in this Territory were assigned, asking them to establish a mission for the pueblos of Laguna and Acoma. My instructions to the teacher I have appointed are, not to interfere with their religion, but to teach them the rudiments of the English and Spanish languages, and to advise them to live in peace till the Government can do something for them. There is good land belonging to the public domain, not far from the present reservation of these Indians, on which the 108 families of Protestants desire to locate, and thus get away from the persecutions of the majority. Were Congress to donate to each head of a family of the Protestant party 160 acres of land on said lands, and thus separate them from the other Indians, with whom they are constantly engaged in strife, I believe much good would be the result, not only to all these Indians, but also to the many citizens of the various towns in their vicinity.

#### T.—SANTA AÑA PUEBLO.

This village has a population of 373 persons, 124 of whom are children; one person only can read and write. They have a grant for 17,712 acres of land, which is confirmed by Congress, but not surveyed. There are but three families of citizens living on this grant, in all nine persons, whose property is valued at \$140. These Indians request the Government to have their land surveyed. I have employed Josefa Muniz, at \$40 per month, as teacher at this pueblo.

#### ZUÑI PUEBLO.

This village is in the western portion of Valencia County, New Mexico, and near the eastern border of the Territory of Arizona. It became necessary that I should visit it on two occasions, and I traveled from this agency three hundred and twenty-five miles and return each time. They are isolated, and until I visited them had never seen an agent of the Government at their village. They number 1,530 persons in this town. There are 333 children, and but one person who can read and write. They have no grant from Spain or Old Mexico, and no lands given to them with a title from the United States. They have occupied the country in which they now live for more than two hundred years, and they earnestly request that Congress grant them a reservation and give them a title to it, the same as the other pueblos have. There are no citizens living near them, and it is not likely that there will be, as they live where there is no stream of water to irrigate with, and they depend for what water they require upon some springs.

I would respectfully recommend that a tract of land thirty miles square, making their village the center, be given to them, and that the necessary appropriation be made to defray the expense of its survey, so that they will know what belongs to them. This town has heretofore been a good place for traders, who sell whisky and gunpowder to the Southern Apache Indians. At last court one of these traders, Sol Barth, was convicted; the judge sentenced him to twenty-four hours imprisonment and a fine of \$25!

This vile and wicked traffic tends to endanger the lives and property

of all the people on our borders in Arizona and New Mexico; hence I have given much attention to the prevention of it, and I have expressly prohibited traders locating at this place. A J. H. Whittington, who was licensed last January by the Commissioner of Indian Affairs, declined locating there, and Andrew Napier, who was about the same time licensed in the same manner, I have deemed it necessary to suspend; hence no trader is now authorized at that village. I believe that for the time being this will be best, and will be of great advantage to the Indians, and a prevention of the traffic carried on from that point with the Apache Indians. A few weeks ago I visited that far-off village, and, assisted by Agent James H. Miller and Interpreter Thomas V. Keams, of the Navajo agency, I settled various cases of murder and robbery between these two tribes, and succeeded, I trust, in making a lasting peace between them.

For many years these Indians were at war with each other, and in 1863 the Zuñi Indians had about one hundred Navajo captives. Finding it too expensive to feed them, they decided "to give them a chance for their lives and liberty." Alas! but a poor chance. This town is constructed with houses from five to seven stories high, streets and alley-ways narrow, and difficult to find a way out unless well acquainted with them. In the public square of this town the Zuñi Indians placed their captive Navajoes, and told them to escape if they could. At each corner were placed a couple of Zuñi warriors, armed with clubs and knives; and the Navajoes attempted to escape, but not one got out of the town alive. Their own description of this massacre made me shudder and filled my mind with horror. They now feel that it was wrong, and were willing to make a lasting peace with their ancient enemies, the Navajoes. There is a Roman Catholic chapel in the village, but the Indians told me that no priest had visited them for several years. They said they wanted an American teacher for their children. I have therefore written to the Rev. John C. Lowrie, secretary of the Presbyterian Board of Missions, asking the establishment of a mission at this place, and have requested him to recommend a teacher. I have not made an appointment of a teacher at this place, because the amount I could pay would not be sufficient compensation to a person qualified for the position, it being one of the most important and laborious in the whole Indian service, and I deemed it best to await the action of the missionary board. Full particulars as to statistics will be found in the three tabular statements herewith.

#### EDUCATION AND GOVERNMENT.

All the Indians of the Pueblo villages are very anxious for schools and take a great interest in the effort the Government is making to establish them. They say they are poor but will furnish land and give aid in building houses for schools and dwellings for teachers, but are not able to pay competent teachers, and they are grateful to the Government for the appropriation made for this purpose. They are the most honest, peaceable, sober, kind-hearted, and industrious Indians in the United States, and, with aid from the Government and the missionary boards of the country, they can be educated, Christianized, and be made good, intelligent citizens. It cannot be denied that these Indians are deserving of the fostering care of the Government. For more than two hundred years it is known that they have maintained themselves and sought to live in peace with all mankind, except the Zuñis, and that, owing to the cupidity and avarice of those who claimed to be more

civilized, they are to-day in no better condition than they were at the time of the discovery and conquest of Mexico.

Each village contains an *estufa*, (place of worship,) partially built under ground and so inclosed that it cannot be entered without the consent of those in charge. It is constructed of adobes, (sun-dried brick,) and entrance is from the roof, to which the Indians ascend by a ladder. The towns are built of the same material, and there was evidence in documents on file in the office of the secretary of this Territory that some of the buildings were erected nearly two hundred years ago. Many of the houses are from two to five stories high and are entered by ladders reaching to the roofs, from which admission is effected by trap-doors to the interior. This mode of entrance was evidently adopted for defense and protection from hostile Indians.

At almost every one of the nineteen villages there are Roman Catholic chapels, which are seldom used ; but the Catholics would object to their being used for schools, believing it "to be a sacrilege to use a church-building for secular purposes." In my opinion, however, there is no necessity for an appropriation at present for the erection of school-houses, as I am satisfied that the Indians will furnish sufficient lands and erect buildings necessary for schools. An appropriation, however, of \$10,000 is required, to be expended *pro rata* in the nineteen Indian villages of this agency for the furnishing of benches, desks, blackboards, school-books, and other facilities for the schools, and of \$5,000, to be expended in the purchase of the necessary implements, seeds, &c., for the establishment of a model and experimental farm in each village, on which the children should be taught practical farming, as well as being taught to read and write. An estimate of the articles necessary will be found in my letter of April 25, 1871, in answer to the letter of the honorable Commissioner dated March 28, 1871.

Each town has a separate organized government of its own, but all are nearly the same, as most of them adhere to their ancient customs and laws. The officers consist of a governor, lieutenant governor, casique, fiscal, superintendent of acequias, (*i. e.*, ditches for irrigation,) war captains, lieutenants, and constables. All the officers are elected annually except the casique, who is in charge of the moral and religious affairs of the pueblo, a sort of high-priest. He holds his office during his natural life.

These people have their own laws and forms of government. When any question arises among themselves it is decided by their own governor and head-men, generally to the satisfaction of all parties; but when they are assailed from without by citizens, knowing nothing of our laws or of the modes of procedure in our courts, (an action brought against an Indian by a Mexican before a Mexican alcalde or jury would certainly be decided in favor of the Mexican,) they can only look to the Government through their agent for protection in their rights; and they complained to me that heretofore their agents staid in Santa Fé, and did not visit them to aid them in their disputes with citizens.

Referring to the various reports of the superintendents and Pueblo agents in New Mexico, I find that in regard to the question of citizens purchasing and holding lands belonging to these Pueblo Indians, they all recommend "the passage of a law by Congress absolutely prohibiting the sale of the lands granted to the Pueblos, and that all sales heretofore made may become null and void; also, that all Mexicans or Americans occupying, claiming, or cultivating said lands be required to abandon and give up the same to the Pueblos, and that some provision be made in said act for reimbursing the amount actually paid by those pur-

chasing said lands under the impression that the Indians had a legitimate right to sell the same." I have here quoted the language of Agent Cooper in the report of the Commissioner of Indian Affairs for 1869, page 250, because it expresses the views of his predecessors upon this subject. I, however, decidedly and respectfully dissent from this recommendation, because in almost every case the Pueblo Indians are willing to allow the citizens to continue to occupy the lands they have in their possession. Take, for an example, the pueblo of the Red Willow Indians of Taos: that pueblo has a reservation of 17,460.69 acres of land, on which there are 397 Indians and 1,602 citizens, which citizens have property worth—real estate, \$115,045, and personal valued at \$91,510. The total value of citizens' property on this reservation alone is \$206,555.

After I had, in company with the governor and head-men of this village, examined the lines of this grant and ascertained the number of citizens upon it, I asked the Indians in a full council if they wanted these citizens to remain. They answered, after full deliberation, that they desired the citizens to remain, but that they wanted some means adopted so that they would know what belonged to them, and what was the property of the citizens; that more than a hundred years ago their forefathers gave to the Spaniards, forefathers of the present citizens, the land now occupied by their children and others to whom it was sold; that this land was disposed of to the Spaniards so as to have a settlement near for mutual protection from the savage bands of Indians, and that it would now be wrong to take it from them when the Indians no longer required their protection.

The total number of citizens residing on the nineteen Pueblo reservations in New Mexico is 5,543 persons. The total number of acres of land belonging to the Indians is 406,563.48. And the total value of real estate claimed by citizens, according to the last census, is \$434,677. This is too much for the Government to pay for the breaking up of some of the best settlements of citizens within the Territory of New Mexico, to give to Indians who, without it, have sufficient land for their support; and who, in all but one or two exceptions, desire that the citizens should keep the land they have heretofore occupied.

I therefore recommend that Congress be asked to pass a law in conformity with the Spanish law, prohibiting these Indians from selling their property, unless under certain circumstances and conditions, as specified in the old Spanish Mexican laws. (See law of King D. Felipe II, in Aranzuez, May 24, 1571; title, "Commands that the Indians may sell their property with the authority of justice." "And ordered to be published in all the pueblos of the district Guadalajara, April 19, 1817.")

In regard to the superior decree ordering the nullity of the sale of the ranch of Peña Blanca, made by the natives of the pueblo of Cochit . (See Escrech s, page 216, Appendix, last edition.)

I would recommend a second section to the law, which should provide that, within two years after the passage of the law, every citizen residing upon Pueblo land shall furnish evidence to the register of the land-office of the district of New Mexico that he has occupied a certain described piece of land on the Pueblo reservation for more than five years; or that he has purchased the same from another who has occupied the same for more than five years; that all persons who fail to prove up their occupancy within the term of two years from the passage of the law shall forfeit the same, to become again the property of the Indians; that the said register of the land-office, during the two years named, shall visit each pueblo and spend two weeks thereat, and give each land-holder full opportunity to secure his land; and no one head of a

family shall be permitted to claim more than 160 acres of land; that the register and receiver of the land-office shall be entitled from each person claiming lands the usual fee for entering homesteads; the parties thus proving their occupancy of land, and conforming with the law, shall be entitled to a patent for the same; that the clerk of the probate court of each county within the Territory of New Mexico shall provide a "Book of Record," in which he shall enter on record every title furnished to him, and for which he shall receive a fee of one dollar for each patent or deed thus recorded.

Thus settling their land disputes, but one other matter remains for the action of the Government.

It has been considered a difficult problem: What is the proper disposition to be made of these Pueblo Indians? What shall be done with them in reference to our body politic? They are in the midst of and surrounded by our population, without any authority to mingle in our political affairs. They are independent sovereignties in the midst of one of the Territories of the United States; and these people have never received until now any aid from the Government of the United States to qualify them to become citizens. They have always been self-sustaining, and are a living evidence that Indians can sustain themselves in spite of oppression and frequent raids against them. They, however, must have, and are entitled to, the same protection that is afforded to the most favored. The faith of the Government was pledged to give it to them when they were acquired from Old Mexico with the territory upon which they live.

The voluntary efforts they have made for the protection of our citizens against the savage Indians; their cheerful acquiescence in the encroachments of citizens upon their lands; their willingness to sustain the Government of the United States during the late rebellion by loans of money to the Government, and by their personal services and their constantly expressed desire to make available all the means in their power for the improvement of their moral and political condition, demand that the United States Government should do something for them so as to qualify them for citizenship. This can only be done by a system of industrial education, which can be established and carried out at comparatively small expense to the Government, and which would be of incalculable benefit to our citizens, to the Indians, and a credit to the Government. Were Congress to appropriate \$25,000 for the first year, and \$10,000 for four succeeding years, to be expended under the direction of the Secretary of the Interior in the establishment of an industrial normal school, with an experimental farm and a mechanical workshop, and place in that school the orphan children of the Pueblo Indians, of whom there are 136, and some of the orphan children of the different savage tribes, (a large number of which are in the Southern Apache bands,) there to educate and qualify them, or the most intelligent of them, as teachers, so that they could keep schools in the pueblos, and on the various reservations where the savage Indians are placed.

I am fully satisfied that with an appropriation of \$65,000, to be expended during the next five years, and the schools sustained in each pueblo as already begun, at the end of that period such an institution would be self-sustaining, and that after three years twenty or thirty competent native teachers could be supported annually. The Pueblos are industrious; they produce all the necessaries of life; the lands they possess are amply sufficient for their support if they are protected in the possession of them; they therefore need only assistance in the way of an industrial and English education, (I believe they should be taught

the English language as one of the most efficient means of their elevation,) and the use of agricultural implements and mechanical tools to aid them. They are, in every way, qualified to receive and profit by the judicious expenditure of a few thousand dollars, and they can thus be elevated and made an efficient instrument to civilize the savage Indians, and add to the material wealth of the country, and be ultimately fitted to enjoy and harmonize with the political, civil, and religious institutions of our country.

The various subjects involved in interest; the scattered location of the villages of the Indians of my agency over a country of great extent; the varied interests involved between the Government, the citizens, and the Indians, renders this agency one of more labor and travel than any other in New Mexico, if the agent performs his duties faithfully, and yet he is not furnished with any transportation but such as he can hire from time to time, which is uncertain and inconvenient.

All these considerations are my excuse, if any is required, for the length and detail of this report.

I have the honor to be, very respectfully, your obedient servant,

W. F. M. ARNY,

*United States Agent for Indians in New Mexico, Pueblo Agency.*

Colonel NATHANIEL POPE,

*Superintendent of Indian Affairs, Santa Fé, New Mexico.*

---

No. 38.

CIMARRON AGENCY,

*Cimarron, New Mexico, September 1, 1871.*

SIR: In compliance with the regulations of the Department, I have the honor to submit the following annual report as agent for the Mouache, Ute, and Jicarilla Apache Indians:

It seems proper that I should give a plain statement of the condition of this agency when I took charge of it on December 19, 1870. During the summer of 1870 the Indians of this agency became exceedingly dissatisfied about the sale of the Maxwell grant to the Maxwell Land Grant and Railway Company, and in the fall had become so hostile that they not only tried to prevent Mr. Maxwell leaving here, but openly tried to take his life. Parties interested, in order to give Mr. Maxwell an opportunity to remove his family and personal property in safety, succeeded in getting most of the Indians off on a hunt by loaning them quite a number of ponies, and telling them that information had been received from Washington that their annuity goods, which had been withheld for about two years, had been forwarded and would arrive here at the close of the year, and that then they would receive an abundance of presents.

On my arrival I found neither a blanket, nor a shirt, nor anything, however trifling, which could be given to them, nor a dollar which could be expended for that purpose. I was left to do the best I could with two tribes of Indians who claimed that, for two years, their goods had been wrongfully withheld from them, and who said that they had either been most thoroughly deceived by men who had always been their friends, or had fallen into the hands of an agent who, instead of giving them at least a portion of their goods, had stolen the whole of them, and that their lands on which they allowed

Mr. Maxwell to live, because he was their friend, had been sold and the proceeds of such sale withheld from them. This made my situation an exceedingly unpleasant one, yet when, during the severe cold of last winter, I saw these poor men, women, and children suffer, and knowing how they had been treated in regard to their goods, I could not, in my heart, blame them for the many hard things they said to and about me. They felt terribly wronged and had to blame some one.

In February I was allowed to expend \$100, and in July about \$200 more, for clothing, but these amounts are so insignificant that it is impossible to give something to each one, and those who receive nothing only become more dissatisfied.

On the evening of March 25 one of the Apaches was killed. Enough is known to show that it was a well-planned and carefully-executed cold-blooded murder by an American, yet legal investigation has failed to bring the guilty party to punishment. This murder, happening just at the time when grass was beginning to grow and give food for their ponies, was looked upon by many settlers as the last straw which would break the camel's back, and bring about the outbreak which they had predicted during the winter, but happily we succeeded in compromising the difficulty at the time, though there is with many Apaches a desire for revenge and a determination to have it, to which they give free expression when under the influence of liquor.

The trading of whisky to the Indians is a constant source of annoyance and of great danger. All the enmity and hate in an Indian are given full sway while intoxicated. The creating of disturbance is much increased by a settled determination of the citizens, strengthened by the rapid increase of numbers, not to submit any longer to insults from drunken Indians. Civil authorities are entirely insufficient in dealing with drunken Indians, and thus we are liable any day to have serious trouble. The Mexicans carry on this trade as a part of their living, and it is done in such a manner that it is almost impossible to detect the guilty parties. Persons are unwilling to give information, for their traveling expenses to attend court are 25 cents per mile, and the Government allows them 5 cents per mile. Thus when a witness has to go to Santa Fé his coach-fare is \$70, and he is allowed only \$15; and at the end of the trial his punishment is in most cases greater than that of the criminal. On the 14th of May I detected a Mexican buying whisky for an Apache Indian. At the July term of the United States district court at Santa Fé he plead guilty, and was sentenced to imprisonment in the Missouri State penitentiary for the term of one year and to pay a fine of \$1.

It is of the utmost importance that the appropriate legislation asked for by the late honorable Commissioner, in his report of last year, in regard to the Utes of New Mexico, and the treaty of March 2, 1868, be granted, and authority given to locate at least the Indians of this agency somewhere in New Mexico, consulting their preference for locality. They cannot stay here much longer, for the country is being settled very rapidly. They get in a habit of "hanging around" here day after day, picking up rapidly the vices and carefully shunning the virtues of the settlers. They are becoming used to a life of laziness, shiftlessness, and drunkenness. There is no game in this vicinity, and when they wish to hunt they have to go a great distance, and lose their rations, which, in case of an unsuccessful hunt, comes doubly hard on them. All efforts for their civilization here, where they do not have a foot of land, but are on the lands of the Maxwell Land Grant and Railway Company, where they come and go when and where they please, are utterly useless. Au-

other and a very great obstacle in the way of their civilization is the continued withholding of their annuity goods.

The story of the Utes with regard to the fraud practiced upon them in the signing of the treaty of March 2, 1868, seems well founded and sustained by "Ouray," the main chief of all the Utes, and undoubtedly is too well known to you for me to repeat here. The withholding of their goods ever since has very much shaken their confidence in the Government. When I talk with them in regard to our intentions to better their condition their answer shows at once that they reason just as soundly as a white man. They say, "If you meant to benefit us and civilize us, you would not let us freeze in winter, but give us a blanket; you would not let the sun hurt our eyes in summer, but give us a hat; or if the Great Father in Washington is so poor that he cannot give us a blanket or a shirt, then he cannot do much else for us." As long as we let them suffer for the want of necessary clothing they will never believe that we are their friends.

The withholding of their goods is not only the great obstacle in the first steps of their civilization, but if persisted in until next spring will most assuredly force these Indians into open hostilities, in which they will be joined by all the Ute tribes. They cannot get through another winter without a liberal issue of clothing this fall. Many of them have blankets so worn that they do not weigh one pound, while many others have not even such a poor blanket, but use a piece of blue drilling instead. To leave men and women with such clothing in a country where we had last winter snow for weeks, and where the thermometer was often at and below zero, will never convince them that we are really interested in their civilization. We must either clothe these Indians or fight them, and thus choose between the expenditure of a few thousand dollars for clothing, or of hundreds of thousands of dollars to fight them, and a fearful loss of life and property of the innocent settlers. As the course dictated in this case by humanity and Christianity is at the same time the less expensive one, and thus appeals with equal force to heart and pocket, it ought not to find many opposers; for however expensive it may be to feed and clothe Indians, it is a great deal cheaper than to fight them.

While, therefore, under certain circumstances the Indians of this agency may, through necessity, be driven to steal and fight, I must, in justice to the great majority of them, state that they have been friendly for many years, and wish to continue so; that the complaints against them by settlers are insignificant; that if they were put on a reservation in the selection of which they were in a measure consulted and their wants properly provided for, they would before long show by actual results that the new Indian policy of the Government could be made a success with them.

I would most respectfully call your attention to another fact in regard to the withholding of goods. Both tribes of this agency have been equally supplied with goods previous to the treaty of March 2, 1868. Now, the Jicarrilla Apaches never had anything to do with said treaty, either by genuine or forged signatures, but when the goods on account of said treaty were withheld from this agency the Apaches became innocent sufferers, and when they ask me for an explanation of this I am unable to account for it on the grounds of either justice or humanity.

My Indians have repeatedly told me of late that the surest way for them to obtain goods was to imitate other tribes of Indians, viz, kill a large quantity of stock and about a dozen citizens, and then they would

have heaps of goods very soon. It is a lamentable fact that they are not far from the truth in this matter.

During the last twelve years there has been but one small dwelling-house put up here, while during the last four months the Maxwell Land Grant and Railway Company has erected seven houses, and twelve more are under contract for erection. The Indians look upon these improvements with a great deal of dissatisfaction, and have asked repeatedly for the removal of the agency. Their well-being requires that they should be removed as soon as possible. This matter is of such importance that the necessary authority and means for establishing a reservation should be granted at once, for congressional appropriations, which cannot be used until July, 1872, will not answer in this case.

After the selection of a reservation it will become necessary to erect suitable buildings; and according to instructions from you I submit the following estimate of cost:

|                                 |          |                         |                |
|---------------------------------|----------|-------------------------|----------------|
| Agent's house.....              | \$2, 000 | Farmer's house.....     | \$1, 500       |
| Store-house.....                | 1, 000   | Blacksmith's house..... | 1, 500         |
| Physician's house.....          | 1, 800   | Grist and saw mill..... | 10, 000        |
| Teacher's and school-house..... | 2, 500   | Stable and corral.....  | 1, 000         |
| Miller's house.....             | 1, 500   | Carpenter's shop.....   | 500            |
| Carpenter's house.....          | 1, 500   | Blacksmith's shop.....  | 400            |
| Total.....                      |          |                         | <u>25, 200</u> |

The buildings in use now are the office-rooms, use of a barn at issue-day, and the necessary store-room when there are any goods to be stored, at an annual rent of \$200.

The health of the Indians has been very good. The number of children under eight months of age is certainly much larger than the number of deaths which have come to my knowledge during the eight months of my service. They dislike to let deaths become known, but if the mortality among them has been greater than I am aware of it must have been among the women and children, certainly not among the men, of whom I miss but very few. Not a single case of venereal disease has come to my knowledge. As far as chastity and honesty are concerned, these Indians are far superior to the great majority of the native population. The continued withholding of clothing from them will soon prove a very efficient agent to force the women into prostitution.

Drinking, gambling, and licentiousness, charged as peculiar vices of Indians, appear very small among these Indians compared with the same vices among an equal number of natives and low whites. But the great influx of immigration and the closer contact with whites will increase the depravity of these Indians and propagate vicious habits very rapidly.

I would most respectfully and earnestly recommend that liberal measures may be adopted for these Indians, who promise as good and speedy results, if properly provided for, as any of the so-called wild tribes of Indians in the country.

I transmit herewith statistical return of farming unfilled, as there has never been an attempt at farming here, and statistics of education filled up as far as numbers are concerned.

I am, very respectfully, your obedient servant,

CHAS. F. ROEDEL,  
*Indian Agent.*

NATHANIEL POPE, Esq.,  
*Superintendent of Indian Affairs,  
Santa Fé, New Mexico.*

## No. 39.

SOUTHERN APACHE INDIAN AGENCY,  
*Cañada Alamosa, New Mexico, August 31, 1871.*

SIR: I have the honor to submit the following as my annual report of the condition of the Southern Apache Indian Agency for the year ending August 31, 1871:

The agency is located in a valley between the San Mateo and Mimbres Mountains, and known as Cañada Alamosa.

The Indians of this agency are composed of the Mimbres, Mogollons and Mescalero Apaches. They have increased from 540, the number at the date of last annual report, to 200 men, 250 women, and 760 children—total, 1,210. The proportion of women to men is much larger than is usual among the Indian tribes of the West, but this is accounted for in the severe losses they have sustained in the almost continuous campaigns which have been carried on against them in this and Arizona Territory during the past ten years.

The Indians are very poor. They have very little stock, a few horses and mules, no other stock of any kind. They have been liberally supplied with summer clothing. They will need blankets to protect them from the severe weather of the coming winter.

I respectfully recommend that they be furnished with 1,000 blankets at as early a day as possible. The liberal provision made by the last Congress to supply these Indians with food and clothing gives great satisfaction, and proves to them that the Government intends to fulfill the promises, repeatedly made to them, that they will be fed and clothed if they will abandon their roaming and marauding habits, and locate on a reservation. No reservation has yet been established for these Indians. Many of them have been here more than two years, anxiously waiting for this question of location to be settled.

I consider it of vital importance to the final success of the wise and humane policy of the Government that a reservation be set apart for these Indians at once, and that the wish of the Indians be regarded in the location. I believe that if the reservation is located in time for farming next spring many of the Indians could be induced to farm, under the direction of a competent farmer.

Last spring, when the people were preparing to plant, I was repeatedly asked by Indians for ground to cultivate and implements for farming.

I respectfully recommend that a few implements for farming be furnished to this agency in time for farming next spring.

While there may not have been as much accomplished as was expected or desired in improving the condition of the Indians of this agency during the year just closed, I feel encouraged with the improvement made. I can see a great change in the deportment and condition of many of the Indians. They have respect for the Government and its representatives, and desire a permanent peace. The women are more cleanly, and many of them try to follow the style of dress of civilized society. By kind and fair treatment I confidently believe that even the Apaches (who are said to be the most treacherous and barbarous Indians on the continent) can be induced to settle permanently on a reservation and adopt the habits of civilization, and in a few years become self-sustaining.

I respectfully recommend that the sum of \$49,859 be appropriated to purchase the following articles of subsistence for 1,500 Indians for the year ending June 30, 1873.

|                                               |               |
|-----------------------------------------------|---------------|
| 547,500 pounds corn at 3 cents per pound..... | \$16,425      |
| 547,500 pounds beef at 6 cents per pound..... | 32,850        |
| 14,600 pounds salt at 4 cents per pound.....  | 584           |
| Total .....                                   | <u>49,859</u> |

Also, that a sufficient sum be appropriated to purchase and transport to the reservation the articles on list A, appended hereto.

Very respectfully, your obedient servant,

O. F. PIPER,  
*United States Indian Agent.*

NATHANIEL POPE, Esq.,  
*Superintendent Indian Affairs, Santa Fé, New Mexico.*

#### No. 40.

#### OFFICE MESCALERO APACHE AGENCY, *Fort Stanton, New Mexico, September 18, 1871.*

SIR: In compliance with instructions contained in circular letter, dated 10th June, 1871, emanating from your office, I have the honor to submit this my annual report relating to the affairs of this agency.

En route from Santa Fe, New Mexico, at Fort Selden, I met Colonel Pope, superintendent of Indian affairs for this Territory, who kindly furnished me transportation, and accompanied me to this post, where we arrived on the 10th of June last. My predecessor, Lieutenant A. G. Hennisee, was relieved from duty at this agency in February last, and consequently I did not receive any information from him as to its condition. I found neither record, buildings, nor property of any kind belonging to the agency.

Through Superintendent Pope and the Hon. Judge Murphy, probate judge for this county, I was put in possession of the facts and fully informed as to the condition of affairs. A petty chief, José de la Paz, with his band, 27 in number, were the only representatives of the Mescalero Apache tribe I found at this post. Superintendent Pope immediately dispatched a small party to communicate with the balance of the tribe, a small portion of which we learned were in the mountains about forty miles from the post, and the remainder with the Comanches in their country.

The Department is aware that in November, 1865, this tribe left the reservation at Bosque Redondo, (where they were with the Navajoes,) through dissatisfaction, neither liking the country nor being associated on a reservation with another tribe for which they entertained unfriendly feelings. I am informed that before they left the reservation Cadetta, the chief, announced their intention to go, but said they would live at peace and go on a reservation if they could be established in their own country on the Rio Bonito or Rio Ruidoso, near Fort Stanton.

The last time they visited this section of the country, previous to coming in upon terms of peace, was upon the 3d of September last. Two soldiers who had been sent out for wood, about six miles from the post, were attacked by José de la Paz and his band; both were killed, and all their mules captured but one, which, with several arrows sticking into it, came in to tell the sad tale.

The Indians were pursued to the mountains by a detachment of cavalry and infantry troops under command of Captain McKibbiu, Fifteenth

United States Infantry, and not until the 20th of the following month were they overtaken, when one was killed, and several taken prisoners and brought to the post. Within a few days the rest of the band came in and were held as prisoners by the military authorities, by whom they were kindly cared for. Great credit is due General Kautz and the officers of his command at this post, for the kind and generous treatment these Indians received at their hands.

On my assuming the duties of this agency the issuing of rations to them by the commissary department was discontinued. I take pleasure in mentioning, in this connection, that the fact of these Indians being now in and at peace is mainly, if not entirely, the result of efforts put forth by Judge Murphy and Colonel Fritz, both residents of this county. They were well acquainted with Cadetta and the principal men of the tribe, Judge Murphy having been their agent at the Bosque Redondo, and Colonel Fritz in command of a company of troops at Fort Sumner, at that time. They have several times, at their own expense, sent out clothing and other presents, with messengers to communicate with the tribe, and on one occasion sent a team and wagon laden with presents into the Comanche country, to induce them, if possible, to come in and make peace. These efforts were at last crowned with success, and the Government not only, but the people of this county as well, are largely indebted to these gentlemen for the important results obtained by their efforts.

On the 5th of July information was received at this office that Cadetta with his tribe was near the junction of the Pecos and Seven Rivers, distant from here about one hundred and twenty-five miles. Mr. Gaines, who brought the information, stated that he had seen Cadetta, who said that if transportation and provisions were sent him from the post he would come in. Accordingly, I applied to General Kautz, who kindly furnished me the necessary transportation, and on the following day, with an interpreter, and Mr. Gaines for guide, taking provisions and some presents, I started for their camp, where I arrived on the 11th of the same month; but they had gone, and when departing had evidently sought to hide their trail by leaving the camp singly. After a diligent search I discovered their trail several miles from their camp, and unfortunately it led off in an opposite direction from Fort Stanton and toward the Guadalupe Mountains. I followed the trail until near night, and to within a few miles of the mountains, then returned to camp.

On the following day I sent the transportation back to Fort Stanton, and with my guide started again for the mountains for the purpose, if possible, of communicating with and inducing them to come in. The presumption was that they had returned to their old haunts, and, perhaps, to the "war path," as they had not waited for their supplies to reach them, and had taken the wrong direction. My guide had lost all faith in their sincerity, and believed it unsafe to follow them to the mountains, but having some faith still, I pushed on. The following day the trail took a turn in the right direction, and following on through the mountains, the fourth day we arrived at their camp in the Pajarito Mountains, about thirty-five miles from the post, and found that Cadetta, with a portion of the tribe, had gone in, having arranged for the balance of the tribe to follow him the next day. I again took the trail following Cadetta, arriving here on the 15th instant.

When they had all got in I called a council, in which Cadetta said they wished to live at peace, and had come in for that purpose; that this was the land of their fathers and also their land, and here they wished to live and die, and calling upon heaven and earth to witness,

said they wanted to make a peace not to be broken, but one that would be firm and lasting. I then made a treaty on the following terms: that they should be protected and provided for by the Government, should have a school for their children, and land to cultivate; also that they should be allowed to keep their stock and all the property then in their possession, if they would remain on the reservation and live at peace, to which Cadetta and head-men of the tribe agreed, and said it was good, again calling heaven and earth to witness that they were now at peace and would remain so.

Cadetta informed me that there were more of his tribe with the Comanches than were here with him, and also some with the Southern Apaches at Cañada Alamosa, all of whom would come in in early autumn, after the rainy season. I have sent out a small party of Indians to the Comanche country to bring in those still remaining there.

I proceeded at once to take a census of those in, and found there were 300, all told; small additions have been made from time to time, and at this date I report 325.

From the best information I can obtain 760, the number reported by W. F. M. Army, esq., to the honorable board of commissioners, and published in their report for 1870, I judge to be the whole number comprising the tribe.

In compliance with instructions received from Superintendent Pope, I have established them on the military reservation above the post on the Rio Bonito. There is some good land which has been under cultivation, both above and below the post, within the limits of the reservation. A small outlay for tools, agricultural implements, and seeds would enable them in a short time to become self-supporting, and having formerly followed the plow myself, I would take great interest in their farming operations. They seem much pleased with the idea of making a crop, and would be much disappointed were they not permitted to do so. Therefore I would respectfully urge that the weapon of civilization be placed in their hands, that they may "learn war no more, but beat their tomahawks into plowshares, and the spears into pruning-hooks."

I have the pleasure to report that up to this time, since the Indians came in, no depredations known to me have been committed by them.

While this is a very virtuous tribe, punishing with great severity any deviation from chastity, they possess a strong appetite for whisky, and this has been my only source of trouble. Soon after my arrival here I promulgated the laws relating to trade with Indians, and Judge Murphy issued a proclamation offering, besides the Government reward, an additional one of \$200 for information which would lead to apprehension and conviction of parties dealing illicitly, and yet, despite all the efforts to bring the guilty parties to punishment, the unlawful sale of whisky still goes on. When questioned as to where they obtain their liquor, the Indians invariably answer, "Have found a spring." I have recently employed a special detective, and hope by this means to stop its sale to the Indians.

Some progress has been made toward civilization. Their custom has always been in case of the death of one of the tribe to burn the wigwam of the deceased, together with clothing, &c.; also to kill his stock. Recently, Chatto, an old sub-chief, died. They immediately burned his wigwam and contents, but I persuaded them to save his horse and mule, and as they would not use them they were sold for the benefit of the family. Cadetta said that, as they were now going to live at peace, they would do different from their old customs, and requested to have a coffin made for Chatto and have him buried in the post ceme-

tery, which, with the consent of the commanding officers, was granted, and, I think, a good impression made. Their custom heretofore has been to leave their dead unburied in some secluded spot.

Some depredations have recently been committed in this vicinity, and as these Indians were here on a reservation they were laid to their charge, but in every case investigation has proven it to be other parties, a full report of which, with the evidence deduced, I have transmitted to Superintendent Pope, at Santa Fé. All the depredations, with one exception, have been the stealing of stock. On the 18th of last month, at the Nogal mine, about twelve miles from this post, an old and valued citizen was shot, while engaged in his business, by a party of Indians, who stole his team and stock of provisions. A man in his employ witnessed the deed and reported the facts, when a detachment of cavalry, under command of Lieutenant O. B. Boyd, went in pursuit. I was absent from the post at the time, investigating the matter of some stolen stock, but upon my return I sent out a small party of Indians to assist in following the trail, who pronounced it to be that of Southern Apaches from Cañada Alamosa. A photograph of the deceased was picked up along the trail. In the San Andres Mountains an Indian camp was found containing several lodges. Lieutenant Boyd followed the trail long enough to convince him that the Indians above mentioned were the guilty parties, and made his official report accordingly.

José Largo, chief of the Jicarilla Apaches, from Cimarron, accompanied by a sub-chief, recently visited their brother Apaches here to confer with them about joining them upon this reservation. After the council they waited upon me and informed me that they wished very much to come here; they did not like the country where they were, but wanted to come where they could have good hunting grounds. The two tribes are closely allied, having intermarried to a considerable extent, and as Cadetta is very anxious to have a union of the two tribes on this reservation, and the Jicarillas are much more civilized than the Mescaleros, and would no doubt be a benefit to them, I respectfully recommend that their request be granted.

I would respectfully call your attention to the fact that when these Indians came in on this reservation, not having received any clothing from the Government for a number of years, they were in a destitute condition. The amount placed in my hands for the purchase of clothing would only give about \$2 15 for each person, which, expended as judiciously as possible, hardly furnished an apology for a suit. An appropriation is therefore necessary as early as practicable for clothing, presents, and blankets for the coming winter, an estimate of which I herewith transmit.

I would also respectfully remind you that there are no buildings on this reservation for the use of the agency. During my short stay here, to my great annoyance and inconvenience, I have been obliged to move several times. I have been able to obtain only one small room in which to live, which is uncomfortable and entirely inadequate, and a small room with dirt floor as office and council-room, at an annual rental of \$360, and am subject to removal at any time. I have no store-room or stable for the winter. In view of these facts I think you must be impressed with the urgent necessity of suitable buildings and quarters for immediate use.

In the estimate transmitted to your office in June last, I did not include blacksmith-shop and quarters for employes. I herewith transmit revised estimate of buildings necessary for the reservation and use of the agency, and for school and missionary purposes. I would respect-

fully urge an early appropriation for the above purpose, that the adobes may be made before winter sets in.

Now that these Indians have been induced to come in on a reservation, and in view of the fact that it has taken so many years for its accomplishment, at the sacrifice of so many valuable lives, and at a large expense to the Government; and in consideration of the vast importance to the people of this country that they should remain at peace, giving security to both life and property; and as it has now become a well-established fact that it is cheaper for the Government to feed Indians than to fight them; and as it is the policy of the Government to civilize them and induce them to adopt peaceful avocations, to elevate and inspire them to higher aims in life by education and the hallowed teachings and influence of the Gospel, I would respectfully recommend that a liberal appropriation be made for this tribe, not only as the cheapest and best means of promoting peace and securing prosperity to this country, but that they may also be advanced in civilization. The only means by which we may hope to accomplish this great *desideratum* is by educating the young, and fitting them for the useful pursuits of life, removing their prejudices and superstitions, and preparing them to receive the gospel of peace.

Cadetta, appreciating the advantages of education, has expressed a desire to have the children of his tribe attend a school. I will take great pleasure and interest in organizing a school, and respectfully recommend that a labor-school be established as soon as practicable.

In the accompanying estimate for subsistence I have based my calculation on one pound and a half of meat and the same quantity of bread. I believe, and experience has shown, that one pound of meat, and the same of corn is insufficient, with their rude and primitive mode of cooking.

A. J. CURTIS,  
*Indian Agent.*

NATHANIEL POPE, Esq.,  
*Superintendent of Indian Affairs, Santa Fé, New Mexico.*

---

No. 41.

ABIQUIU AGENCY, NEW MEXICO,  
*September 1, 1871.*

COLONEL: In compliance with instructions from the Indian Department, I have the honor to submit this my third annual report.

The Indians under my charge embrace the Capote and Weminuche Utes. The agency for these Indians is at Abiquiu Rio. Arriba County, New Mexico.

The sanitary condition of these Indians during the year has been generally good; there has been no epidemic or contagious diseases among them during the year, and the increase of the population has been nearly equal to the number of deaths, but I am fully convinced that in the aggregate the population of these Indians is gradually decreasing, owing to the frequent intermarriages among near relatives. My further acquaintance with these Indians convinces me that in respect to character or morals there has been no marked change with them since my last annual report.

During the year I have visited many of their lodges and have taken

great pains to ascertain their correct number, which I find to be substantially the same as it was at the time of my last annual report, viz: The Capotes number—men, women, and children—250; the Weminuches number—men, women, and children—650; making a total of 900 Utes belonging to this agency.

These Indians have obtained, during the past year, by hunting and trapping, as near as I can ascertain, from \$1,200 to \$1,400 worth of furs and skins, and I judge they sell and trade off one-half of this amount for horses, rifles, manta, sugar, and coffee; I should also state that they buy calico for their women and children, and ready-made shirts for themselves. The balance of the furs and skins they make up into clothing.

The Indians of this agency, during the past year, have given no attention to agricultural, and but very little to pastoral pursuits. Many of the Capotes and Weminuches, however, own goats. Some of them own a very few sheep. With the milk obtained from the goats, and the corn or wheat which they receive from the agency, these Indians make shagnegie, (mush,) of which they are very fond. This corn or wheat is first roasted before it is ground. This food is very nutritious, and the children, especially, thrive on it.

The greater part of these Indians own Mexican ponies, and many of them are very fine and pretty; these they seldom take into the agency for fear they will be stolen. Some Weminuche chiefs own fifteen and twenty ponies each. All of the Utes are very choice and proud of a good horse, and they will not sell one for money, but they will often trade off an inferior pony for a rifle, or a nice Navaho blanket. Nearly all the men are supplied with muzzle-loading rifles and Colt's revolvers.

With a very few exceptions the Weminuches have lived west of the Rio San Juan during the past year, and I believe that not more than one-half, or, at most, three-fourths, of them have visited the agency during that time, and the cost to the Government in feeding and clothing them has been a very small item, as this tribe has nearly sustained themselves by the chase, having been very successful in hunting and trapping, especially during the fall and winter months, the principal game being bear, deer, and beaver.

The Weminuches do not generally visit the agency oftener than once in two or three months. They come in parties or families of from 25 to 50, and they never remain at the agency longer than one day and night, when they return to their hunting grounds. I feed them well while they remain, and supply the men liberally with powder, lead, percussion-caps, and tobacco, to take back with them, as I know they will make good use of it. At the same time I give the chiefs of these parties powder, lead, and tobacco, to take to their friends and relatives that do not come in; I also issue the women and children all the wheat, corn, and salt that they require.

I am pleased to state that this tribe of Utes have committed but very few depredations during the past year, and but very few complaints have been made against them. They are well disposed towards the Government and the people, and are very peaceable, and with a liberal supply of clothing and blankets they would be very contented and happy.

In this connection I would state that in respect to clothing the Indians of this agency are in a very deplorable condition; many of them have not clothing sufficient to cover their nakedness, as they have received no annuity goods since November, 1869, and then they only received 400 Mexican blankets, a few hickory shirts, and a small supply

of linsey, kerseys, and manta. The women received a very good supply of calico, but it was of very poor quality, it having been stored in Santa Fé for three or four years. All of them suffered very much last winter for the want of suitable clothing, and I cannot urge too strongly the importance of supplying them well before another winter sets in.

The Capotes (with the exception of Sobeta's party) are not so good Indians, and have not behaved so well during the past year as the Weminuches. During a great portion of the time they have lived and roamed in the vicinity of Tierra Amarilla, distant fifty miles northwest from the agency, and have been a source of much trouble to the people of that place by committing depredations upon their stock. This was more especially the case in the months of April and May; since then they have done very much better, and at this present time are very peaceable and well disposed, I having prevailed upon the greater part of them to break up camp and to move a good distance from that place.

This tribe depends almost entirely upon the Government for subsistence, with this exception, that during nearly three months of the past winter Sobeta, Chavez, and Timpayache, with their families, numbering in all 175 persons, lived at the Nacimiento and the Rio de la Gallina, (Hen Creek,) and during those three months turkey, geese, and ducks, are very abundant at those places, and these Indians killed a great many of them for food. The first named of these places is distant seventy-five miles, and the latter place fifty miles, in nearly a westerly direction from the agency. As soon as spring opened, Sobeta removed to Pagoso Springs, on the Rio San Juan, where he has remained most of the time during the summer; at the same time Chavez and Timpayache removed to Tierra Amarilla, where they have remained until very recently. The other Capote chiefs are Coronía and Cutchumpiache, who, with their bands, have remained nearly all of the past year in Tierra Amarilla, or at the agency. These two bands of Indians have caused me more trouble than all the rest of the Utes of this agency.

In this connection I would state that the stock herded in the precinct of Tierra Amarilla has increased more than one-third during the past two years, and the number of sheep alone, owned by the citizens, is estimated at 75,000; consequently a large extent of country is devoted to grazing purposes, and the Indians of this agency roam over this country at will, and many of them, but more especially those belonging to Coronía and Cutchumpiache's bands, (Capotes,) have got the art of stealing down to a science, and when the temptation is so great they cannot resist the opportunity offered them of displaying their talent in this respect, if they be ever so well supplied by the Government.

During the past year the Capotes have stolen thirteen horses. Five of them were stolen from Americans living at Ute Creek, New Mexico; four of them were stolen from Mexicans at Ojo Caliente, New Mexico; three were stolen from Mexicans living in Conejos, Colorado Territory; and one from a Mexican living at the Rio de la Gallina, New Mexico. I am happy to state that all of these animals, without one exception, have been delivered to their proper owners. They were recovered principally through the exertions of Tomas Chacon, (formerly Ute interpreter,) Ignacio, (head chief of the Weminuches,) and Chavez and Sobeta, (Capote chiefs.) In recovering the four horses stolen from the Ojo Caliente these men were in the mountains ten days during the coldest weather last winter, and they suffered very much from frost-bites, (the chiefs more especially,) they not being supplied with suitable clothing. I state these facts to show that the chiefs are well disposed and do all in their power to comply with the wishes of their agent. I

would also state that, on the 23d of July, I recovered a horse in Tierra Amarilla that had been stolen from a Mexican in Conejos, Colorado Territory, by a party of Capotes, more than two years ago, and before I took charge of this agency. The Indians admitted that the horse was stolen from this Mexican at that time, and the same was delivered up to me, and I returned it to the owner without any assistance from the chiefs.

Three or four instances have also occurred where Mexican thieves have stolen horses, and, probably from fear of being found out, have sold or traded them to the Capotes. The owner is, of course, entitled to his horse wherever he finds it, but the Indians do not understand this, and think it very hard to give up a horse when he came honestly by it. There are also a few rascally, mischievous whites in this country, who take every opportunity to prejudice the minds of the Utes against the Government and the agent; and these same evil-minded persons will buy whisky and give it to the Indians for furs and skins, and make a great deal of money by the means. It will be an impossibility to remedy this state of affairs until the Indians are placed on a reservation, and ample power given to enforce the "intercourse law."

During the summer four or five parties of Americans and Mexicans have prospected for gold in the San Juan country, and, so far as I have heard, the Indians have treated them with great kindness. I think none of these parties have yet discovered gold in paying quantities.

On the 15th of last February, Ojos Blancos and sixty other Jicarilla Apaches came in to the agency, bringing with them a letter from your office instructing me to issue them a small quantity of powder, lead, and percussion-caps. If I thought they would make good use of it, I gave them what I could spare. These Indians often visit this agency in small parties. I generally give them tobacco to smoke, and I have sometimes given them wheat and corn in small quantities to take away with them. I believe they are very good Indians.

May 24, while I was absent in Tierra Amarilla, a letter written by T. D. Burns of that place was referred to me through the office of the commanding officer, district of New Mexico, with instructions to report to that office if the statement made in the above letter was correct. Mr. Burns stated in this letter that the Indians of this agency were committing many depredations upon the citizens of Tierra Amarilla, and that many of them were fearful that the Indians were about commencing open hostilities. I had a council with the Indians, and many of the citizens were present, and after making all due inquiries I became convinced that parties of these Capotes had been guilty of many depredations during April and May, but I was also well satisfied that no open hostilities was intended by them, and but very few of the people thought of such a thing for a moment, and that this report of hostilities was gotten up by two or three unprincipled Mexicans.

But having become satisfied that the statement made by Mr. Burns, in regard to the depredations committed by these Indians, were in the main correct, and in view of the fact that the great number of sheep herded in the precinct of Tierra Amarilla offered so good an opportunity for these parties of thieving Capotes to continue these depredations, I reported direct to the arsenal (you being absent at the time in the southern Apache country) that I thought it advisable, and I respectfully requested, that a company of troops might be stationed at that place during the summer for the purpose of punishing any parties who might be guilty of stealing.

No troops were sent to Tierra Amarilla, however, and it gives me

pleasure to state that none have been necessary since then, and all of the Capotes have done as well as any one could wish; and that I can report that at the present time the Indians of this agency are very peaceable and well-disposed.

With the exception of Sobeta's party, all of the Capotes have always been afraid to hunt in the San Juan country for the reason, they say, that they are afraid of the Weminuches, but at this time many of them have overcome that fear, and Cutchumpiache, with his band, (the worst of the Capote Utes,) are already hunting with the Weminuches west of the San Juan, and the rest of them have told me that they would accompany me to that country as soon as I was ready to go, and if I can prevail upon them to remain there except when they come to the agency for supplies, it will be one great step toward keeping peace and good feelings between them and the whites.

If the Department does not deem it politic to place the Utes of this agency on a reservation, I would most respectfully urge that the agency at Abiquiu be dispensed with and a new one made at Tierra Amarilla. I recommended this in my last annual report, and gave, as I thought, cogent reasons why it should be done, and after another year's experience I am more than ever convinced that it would be for the best interest of the Government, the citizens of this county, and the Indians. I am sure if the agency had been located in Tierra Amarilla during the past summer, many of the petty depredations committed by these Indians could have been prevented, for the reason that when the Indians steal any sheep from the people of that place, before the agent, who is supposed to be at the agency in Abiquiu, is notified of the theft, these Indians have the sheep killed and eaten; and nearly all of the depredations committed by the Utes of this agency are committed upon the people of this place, it being the extreme western frontier settlement in this country.

Every proper effort has been used by myself to induce the Utes of this agency to move upon the reservation set apart in Colorado for their homes by the treaty, but to no avail. They are very superstitious in regard to abandoning the country where their ancestors lie, but I am confident if a reservation be set apart for them in what they claim as their country, and proper encouragement be given them, that in a short time the greater part of them would engage in agricultural and pastoral pursuits, and become self-supporting.

I would again most respectfully and earnestly call the attention of the Department to the destitute condition of these Indians as respects clothing, and the great importance of supplying them well as soon as possible. Please to urge this matter, as these Indians begin to think that the Government do not care anything about them; at any rate they complain very much and think it very hard, and I think many of them blame their agent and lose confidence in him because they are not better supplied.

I hope I may be pardoned for writing such a lengthy report.

I have the honor to inclose herewith tables of farming, education, &c., appertaining to this agency. Also please find accompanying this an estimate of the probable cost of erecting suitable buildings at this agency for the agent, employés, and Indians, (marked A,) as per instructions received from your office in a circular letter dated August 12, 1871.

I am, sir, very respectfully, your obedient servant,

J. B. HANSON,

*First Lieutenant, Tenth Infantry, Indian Agent.*

Colonel NATHANIEL POPE,

*Superintendent Indian Affairs, Santa Fé, New Mexico.*

## A.

Estimate of the probable cost of erecting suitable and necessary buildings for the use of the agent, employés, and Indians; also for the stable and corral at this agency, viz:

|                                           |                  |
|-------------------------------------------|------------------|
| 1 building for the agent.....             | \$800 00         |
| 1 building for the employés.....          | 1,200 00         |
| 1 building for the stable.....            | 500 00           |
| 1 building for the corral.....            | 300 00           |
| 25 buildings for Indians, \$300 each..... | 7,500 00         |
| 1 building for the store-house.....       | 800 00           |
| 1 building for the blacksmith shop.....   | 300 00           |
| 1 building for the grist-mill.....        | 400 00           |
| <b>Total .....</b>                        | <b>11,800 00</b> |

This estimate is made upon the supposition that the Department intends placing these Indians on a reservation in the San Juan country. Abiquiu is a Pueblo town containing 225 Mexican inhabitants; and all the land is taken up by them, so there is none left suitable for agency buildings; and it would not be economy for the Department to erect buildings for an agency in this place, but it would be for the Department to erect agency buildings in the San Juan country, for the reason that the Utes would soon become self-supporting.

Only one building is used by the agent at Abiquiu, and this is used as a store-room, office, and sleeping-room. This building is rented from José Pablo Gallegos, at \$200 per annum.

J. B. HANSON,  
*First Lieutenant, Tenth Infantry, Indian Agent.*

## MONTANA SUPERINTENDENCY.

## 42.

OFFICE SUPERINTENDENT OF INDIAN AFFAIRS,  
*Helena, Montana Territory, September 15, 1871.*

SIR: In accordance with instructions, I have the honor to submit my first annual report as superintendent of Indian affairs for Montana, with the accompanying reports of the different agents in this superintendency.

I arrived here October 18, 1870, relieving Brevet General Alfred Sully, United States Army, to whom I receipted for all public property for which he was accountable as superintendent of Indian affairs.

Owing to the changes made in the administration of Indian affairs, in substituting civilians in place of Army officers, and expecting from day to day to be relieved, General Sully had not made much provision for feeding the Indians in the superintendency during the approaching winter, and at his suggestion that the matter needed immediate attention, on account of the difficulty in transporting stores during the winter months, I telegraphed you for permission to purchase supplies in open market, for the Gros Ventres and Assinaboines, which permission was granted, and thereby a great saving made to the Department.

I had assumed charge of this office but a very few days before I was convinced that the bottom of all Indian troubles and depredations in this Territory was whisky, and I immediately set to work, with all means in my power, aided by the cheerful co-operation of the United States marshal, to endeavor to suppress this villainous traffic.

It is needless to dilate upon the disastrous and demoralizing effects to the Indian of the "whisky trade." Robes, blankets, horses—everything—is sacrificed to whisky, and when reduced to utter poverty the Indian steals, and the result is war with the whites.

I met with immense difficulty in my endeavors to reach the offenders. I found them in all cases backed up by men of large influence and capital, who covered up their workings so carefully that it was next to impossible to lay hands on any with sufficient proofs for conviction. So thoroughly identified with this trade were men of influence and means that I have been warned and cautioned by men high in standing in this community that my course "would not do;" "that the whisky trade always had been carried on and was a part of the legitimate business of the Territory, and a continuance of my course of prosecution would bring down upon me an opposition that I could not possibly stand under." I thought otherwise, and finally at the last term of court held at Deer Lodge, Montana Territory, two men were convicted for selling whisky to Indians; one was sentenced to eighteen months imprisonment in the penitentiary, and the other to six months, he being in feeble health and pleaded guilty. This had an excellent effect, and on the west side of the mountains, where these two men had been operating, a regular-stampede took place out of that section of the country of "wolfers" and whisky traders. The hardest blow to their trade was the fact that the above men were convicted on Indian testimony, and that it was the first conviction for selling whisky to Indians recorded in the Territory.

In addition to the sentencing of these two men, some hundred robes and other furs were seized and condemned by the courts for violation of the intercourse laws. These convictions were not without their effect on the east side of the mountains and at Fort Benton. Fort Benton is the hot-bed and stronghold of the whisky trade, the starting-place of nine-tenths of the Indian mischief in the Territory. Since the two convictions referred to, I am happy to state that many of the men who opposed my course last winter, and were so prophetic of its dire effects to my own welfare, are now cordially helping me in the suppression of the whisky traffic, and I am in hopes in the course of the coming year that the trading of whisky to Indians will be entirely suppressed, or at least be confined to the British possessions.

In connection with this matter there is a question of great importance, affecting the ultimate success of the Department in putting down the trading of whisky to Indians. As before referred to, the offenders are backed by rich men, who employ the best counsel in the Territory for their defense when arrested, and against whose talents the abilities of the United States attorney, single-handed, are not effective. During the last March term of court held here, a man named Culverson was indicted for whisky dealing with Indians, but was cleared entirely by superior skill on the part of his counsel which the money of his backers had procured for him. Correspondence with your office and the Department of Justice has been had, asking for assistance to the United States attorney here in prosecuting these cases, but owing to no funds being appropriated for the purpose, consent could not be given.

I would respectfully recommend that, during the forthcoming session of Congress, a special appropriation be asked for to procure the necessary legal assistance to prosecute offenders against the laws governing trade and intercourse with Indian tribes.

It is with pleasure I state that the different Indian tribes in this superintendency, with whom the Government has arranged terms of peace, and who are receiving the care and protection of the Indian Department, have conducted themselves peaceably and quietly toward the whites during the past year. The humane policy, so earnestly advocated by President Grant, is having its good effect. At first the Indians would not believe that the Government really intended to take

care of them and their children. Little by little the truth has dawned upon them, and to-day I can say, without fear of contradiction, that all the Indian tribes living on and identified with reservations in this Territory are not only willing, but really anxious, to have farms, and be taught the self-dependent principles of civilization. The requirements and necessities of the different tribes in this respect are fully set forth in the reports of the different agents herewith forwarded.

The Indian tribes recognized by the Department as properly belonging to this superintendency are the Assinaboines, Blackfeet, Bloods, Piegiens, Crows, Flatheads and other confederate tribes, Gros Ventres, and the mixed Bannacks, Shoshones, and Sheepeaters. In addition to these a very large body of Yankton, Santee, and other Sioux have come to the Territory, locating themselves near the Milk River agency, and are receiving limited subsistence from the Department; also, some of the Northern Cheyennes and Arapahoes.

While the reports of the different agents are full in regard to the actions and necessities of the various tribes, I deem it advisable to make a few remarks on each agency respectively.

#### MILK RIVER AGENCY.—ASSINABOINES AND GROS VENTRES.

Part of the Assinaboines range north of the Milk River and in the British possessions, and part of them with the Northern Cheyennes and Arapahoes and River Crows range south and west. The Gros Ventres generally range with the Northern Cheyennes and Arapahoes and River Crows on the west. They are peaceably inclined, and have always shown a friendly disposition toward the whites. As mentioned by my predecessor, General Sully, in his annual report of last year, there is no doubt but they could be induced to turn their attention to farming, as will be seen by the report of their agent, A. J. Simmons; they talk earnestly of this, and it is to be hoped that the necessary funds will be produced by Congress to remove the Milk River agency to a more suitable agricultural region at an early date. The Milk River country is entirely unfit for farming purposes; there is no water for irrigation; in fact, none that is fit to drink in the summer season. The employés of the agency have to boil and skim all water used for domestic purposes, and besides the location itself is totally unfit for an agency, being commanded by a long bluff within 200 yards of the gate where 10,000 Indians could conceal themselves and attack the post without fear of dislodgment. The truth is, influence was brought to bear in the interest of the whisky trade when the place was built, considerable traffic being carried on in that article there in past years. Certain it is, that affairs at this agency were grossly mismanaged, it being made a rendezvous for whisky dealers and illicit traders of all descriptions. Soon after taking charge of the superintendency I received information to this effect, and with the aid of a detective, hired for the purpose with the approval of the Department, I discovered how matters had been conducted there; provisions sent for issue to the Indians were traded to them for robes and furs, and whisky openly traded at the post, and Government property squandered and sold in the most barefaced manner. I succeeded in seizing twenty-one head of work cattle belonging to the agency, which had been disposed of by the late agent, A. S. Reed, and they are now held by the United States marshal, subject to the decision of the courts, but there is no doubt whatever that they will be restored to the Government. Reed found that he was so closely beset by affidavits of his former employés and others that he

came forward and acknowledged by affidavit that he had embezzled the cattle and sold them, pointed out where they were, and consequently they were seized.

On November 7, 1870, by instructions from your office to send a suitable person to take charge of this agency, C. L. Clark was sent, and a different order of things soon made manifest. Under his administration the whisky traffic was stopped, and he being a deputy United States marshal, the men who had been robbing the Government and cheating and poisoning the Indians found it prudent to leave. The Indians soon found that they had a different policy to treat with; one that satisfied them better, and although some of them who loved whisky so dearly went off to other points where they could get it, nearly all of them were better contented to receive rations of flour, sugar, and coffee.

On April 1, 1871, Special Agent A. J. Simmons took charge of the agency, and since that time large bands of Yankton, Santee, and other Sioux have attached themselves to the Milk River country, declaring their intention to stay there, and are being fed, by orders from the Department, in a limited manner. For particulars concerning these Indians I respectfully refer you to accompanying report of A. J. Simmons. Large numbers of the River Crows also hunt with the Assinaboines and Gros Ventres, and frequent this agency to procure subsistence.

#### BLACKFEET AGENCY.—BLACKFEET, BLOODS, AND PIEGANS.

In March last J. Armitage was appointed agent for the Blackfeet, Bloods, and Piegans, and on April 1, 1871, I accompanied him to the agency to place him in charge, *vice* McCauley.

Some two hundred Piegans, under Chief Big Lake, were at the agency, desiring to remain there permanently and engage in farming. Owing to misrepresentations made to them by McCauley, I found them bitterly prejudiced against myself and the Department, and disposed to prevent Armitage from taking charge, desiring to retain their late agent. Why this very small portion of the Indians belonging to the Blackfeet agency were so anxious to retain their old agent is very clearly understood on reference to accompanying report of Agent Armitage, showing the disposition McCauley made of the annuity goods, giving to some 825 Indians all the annuity goods intended for the entire tribes of Blackfeet, Bloods, and Piegans, some seven to eight thousand souls. No wonder they were averse to a new management; but after a long and tedious council I finally appeased their anger and reconciled them to the change.

A large number of the Piegans wish to remain constantly at the agency, and have farms of their own. In order to carry out this, the policy of the Government, I respectfully recommend that a reservation be surveyed and set apart for the Indians of this agency, so that their wishes may be gratified.

I desire to invite the attention of the Department to the progress made during the present year in farming at this agency. Up to the time of Agent Armitage taking charge not a single acre of land had been broken or fenced; now, as will be seen by the agent's report, some 75 acres have been planted with wheat, oats, barley, potatoes, &c., besides a large stock of garden vegetables, all of which will be of great benefit to the Indians, not only for consumption during the winter, but also because it has opened their eyes to what a little work during a few months in the year will do toward their comfort in winter. The example has not been lost to them, and they are very anxious indeed to have

houses built for them next year and proper provision made that they may farm for themselves.

Lumber has been sent from Helena for the purpose of building a school-house, and present indications are that it will be numerously attended. A teacher has been engaged, and I have no doubt the school will be a complete success.

**FLATHEAD AGENCY.—FLATHEADS, PEND D'OREILLES, AND KOOTENAYS.**

These Indians occupy a large scope of country, from Flathead Lake south to the Bitter Root Valley. They are partially civilized, being under the tuition of the Roman Church, and some of them have made good progress in farming.

A contract has been made to erect a saw-mill and grist-mill on the Jocko reservation in the place of the mill burnt down in 1869. The mill is now en route from the Missouri River to the agency, and cannot fail to be of great benefit to the Indians.

I would respectfully invite your attention to the importance of taking measures to secure the removal of the remnant of the Flathead tribe of Indians from the Bitter Root Valley. This action has been urged by the present agent, Charles S. Jones, and his predecessors; also by General Alfred Sulley in his annual report of last year, and is one of vital interest to the Indians themselves and the citizens of this Territory. They should be moved to the Jocko reservation, set apart in 1855 for the confederate tribes of Flatheads, Pend d'Oreilles, and Kootenays, the Government either paying them a fair price for the improvements made to their farms in the Bitter Root Valley, or else establish them in as good condition on the Jocko reservation. In my opinion, it would be more feasible and give better satisfaction for the Department to pay them for their improvements, and transport them and their effects to their proposed new home.

There are but three really good Indian farms in the valley, and the settlers would be perfectly willing to let these remain, together with such other Indians as could be induced to take possession of their farms in severalty. There are about 150 other Indians, and the total cost of removing them and paying for their improvements would not exceed \$5,000. This question is getting yearly more complicated, and unless a peaceful solution is arrived at by the Department, I am fearful that very serious trouble will occur between these Indians and the constantly increasing number of white settlers in the valley. There are now about 1,000 white settlers on well improved farms in the Bitter Root Valley, and each year adds to the number, and the consequent difficulties surrounding this question, which must eventually, and at no distant day, result in serious trouble, unless attended to by the Department without loss of time, and the Indians removed.

The Indians do not remain on their farms the year round, but every spring and fall go on a buffalo hunt, and white settlers constantly complain that when starting on a hunt the Indians steal their horses and trade them off to Indians on the east side of the mountains.

I visited this country a short time back in company with Hon. B. F. Potts, governor of this Territory, and William Clagett, Delegate elect to Congress; both gentlemen fully concur in my views and the views of the several agents heretofore in charge of the Flathead agency, and of my predecessor, that these Indians should be removed to the Jocko reservation without delay, as serious evil will result very shortly if they are allowed to stay where they now are.

The Indians themselves fully understand that, by the eleventh article of what is known as the Stevens's treaty, the President has the right to decide on their removal at any time, and I respectfully urge that this matter be brought to the attention of the President, and that the work be carried out at an early day.

As will be seen by the accompanying report of Agent Chas. S. Jones, the entire crops belonging to the Pend d'Oreilles have been destroyed by crickets; also, that the Flatheads have had their crops seriously damaged. In view of the fact that these Indians are regarded by the Department as self-sustaining, or nearly so, no provision has been made for their subsistence, except in the case of a few sick and destitute Indians. I do not see how great suffering, even starvation itself, is to be avoided, unless some assistance is rendered them. I would therefore respectfully recommend that Congress be solicited, as early in the next session as possible, to make an appropriation of \$12,000 for the relief of these Indians.

That the Indians belonging to this agency may be encouraged in their agricultural pursuits, and rendered entirely self supporting, I would respectfully recommend that at the next session of Congress a special appropriation be asked for, in the amount of \$5,000, to purchase necessary agricultural implements for their use.

#### CROW AGENCY, FORT PARKER.—MOUNTAIN CROWS.

The Mountain Crow Indians have generally confined themselves to their reservation, occasionally going north of the Yellowstone River after buffalo, making but short hunts, however, for fear of Sioux, who are in very large numbers near their reservation.

These Indians have been liberally treated by the Government, and fully deserve all that has been done for them.

Early in December last I visited this agency and saw the Crows for the first time. Part of them only were in, and the chiefs and head-men who were still on the hunt sent word to their agent to distribute to such Indians as were then at the agency their proportionate share of the annuities. This was done, and the quantity and quality of the goods gave great satisfaction, and the Indians were very voluble in their thanks to the Great Father for keeping his word to them so faithfully, and for their part they would keep good faith, and try to do all that the Government asked them to do.

Some of the head-men, with families, were very anxious to have houses built for them the coming spring (1871) that they might turn their attention to farming. They spoke so earnestly, and with such evident good faith, that this summer I authorized Agent F. D. Pease to contract for the building of twenty-five double houses for the use of such Indians as would turn their attention to farming.

The result has satisfactorily proved the benefit of these houses. All are occupied by Indian families. A hundred such houses could be filled in the same manner. I am agreeably astonished at the disposition shown by the Crow Indians to do what is desired of them by the Department. A large number of them have shown evidence of a willing spirit to work; quite a number have done good work this summer, and all the occupants of these houses have forsaken their tepees with the express intention of farming. This satisfactory evidence of a civilizing disposition is due, in a great measure, to the advancement made in the farming operations of the agency under the management of Agent F. D. Pease.

When Agent Pease took charge of the agency there were but seven or eight acres of land that had been cultivated, and no fencing at all. Now there are several miles of fencing and irrigating ditches, with about 100 acres of land under cultivation, with good, substantial farm buildings and other improvements. The Indians have the evidence of their senses that all this is good for them, and, as I have before stated, over 100 families are anxious to till the land for their own exclusive benefit.

Another source of gratification is the interest they are showing in the education of their children. Some forty or fifty scholars (children) were attending school during my last visit there a few days since, and were making satisfactory progress. The number of scholars is rapidly increasing, and I would respectfully point out to the Department the necessity of establishing a manual-labor school during the coming winter.

In addition to the Mountain Crows there are large numbers of River Crows—about forty lodges—who frequently visit this agency, and are fed there. There are also some twenty-five lodges of Nez Percés Indians, who, with the consent of the Crows, have been incorporated into the Crow tribe, and are fed from supplies belonging to the Crows. The same with a few lodges of Bannacks.

I concur with the suggestion of Agent Pease, that in the place of so many socks and red and blue flannel, one and two point blankets be substituted, for the reasons given in his report, and would respectfully suggest that the change be made for all the Indians in this superintendency receiving annuities.

#### MIXED BANNACKS, SHOSHONES, AND SHEEPEATERS.

On my arrival to take charge of this superintendency I found these Indians without any settled home, migrating to and from the Yellowstone country and the Salmon River. In the spring and summer they caught fish from Salmon River, and in the fall and winter, such as had horses, were in the habit of hunting buffalo in the Yellowstone country.

There was considerable talk among the Crows last fall of having the Bannacks, Shoshones, &c., go to the Crow reservation, and live and hunt with them. It was an arrangement which promised to be satisfactory to all parties concerned, and to accomplish this end I sent A. J. Simmons to Stinking Water Valley, Virginia City, Beaverhead, and other places, to gather together the scattered remnants of these tribes, who were prowling around the country half starved, and in a deplorable condition, for the purpose of taking them to the Crow reservation. Owing, however, to some difficulty occurring between the Crows and such of the Bannacks, Shoshones, &c., as were on the Yellowstone, there being mutual recriminations of horse-stealing, the Bannacks, &c., finally concluded that they would go back to their old home on Salmon River, and stay there. Mr. Simmons, therefore, under my directions, gathered them together in a valley about twenty miles above the mouth of the Lemhi Fork, suitable in every respect for a home for these Indians. Simmons receiving the appointment of special agent at the Milk River agency, A. J. Smith was placed in charge, and immediately set to work breaking and fencing land, building houses, and in other respects providing for the production of a crop of cereals and vegetables for the coming winter. The Indians themselves joined heartily in the work, and, with the help of some four men, they have fenced in a farm of 450 acres, and constructed over a mile of irrigating ditch, besides lateral ditches.

This land was all covered with sage brush, which the Indians grubbed and burned, besides doing much of the labor in fencing and helping to raise the crop, of which there are 60 acres, consisting of wheat, barley, turnips &c., all looking well. There will be about 3,000 bushels of potatoes, 160 bushels of wheat, and about the same in barley. Another year, at least, one-half the heads of families will be cultivating farms on their own account. One Indian has 10 acres of fine crops—much more than he will need the coming winter.

In addition to the crop raised, upwards of 3,000 pounds of salmon have been caught, dried, and stored away for winter use, and the Indians are still engaged in the same work.

I am satisfied that these Indians will be self-sustaining in three years, with proper management and encouragement. It is surprising the interest these Indians take in agricultural pursuits. Probably their bitter destitution in the years 1867-'68, and '69, have been a lesson to them which they do not wish to repeat. I would, therefore, respectfully recommend that, in making the appropriation for these Indians for the fiscal year ending June 30, 1873, \$5,000 of the same be appropriated for the purpose of purchasing agricultural implements and appliances, so that they will be enabled to contribute materially to their own support.

Fort Lemhi is named as the locality of these Indians, simply because it is the nearest settlement. The Indians are not located at the Fort, but on the Lemhi fork of Salmon River.

#### TETON SIOUX.

While the Indians identified with reservations and receiving assistance from the Department, in this superintendency, have conducted themselves well and peaceably during the past year, it is with great regret that I have to report a raid into Gallatin Valley, (undoubtedly by Teton Sioux,) on July 24, 1871, in which two settlers of the Valley were killed, and a large number of horses were run off. Part of the horses were recovered, but, from the most reliable information I could obtain on the spot, the Indians succeeded in getting away with some forty head. Troops from Fort Ellis and citizens pursued them far into the Indian country, but did not succeed in overtaking the marauders.

This raid was undoubtedly made by a straggling thieving party belonging to the Teton Sioux camped between the Yellowstone and Powder Rivers. It is worthy of mention that the men killed were not scalped, which would have been done had it been a regular war party.

Of these Teton Sioux, there are probably 1,000 lodges, under the control of Sitting Bull. These Indians occupy and range over a section of country which covers the proposed route of the Northern Pacific Railroad for several hundred miles, and from all I can learn it is their intention to resist the survey of that country, and the road itself. But very little is known of these Indians except as to their general character of being a nervous and hostile band. They refuse all intercourse with whites and friendly tribes, and I am not aware of their ever having made any terms with the Government, or that they have received any presents or aid therefrom.

Red Cloud claimed to represent them in his negotiations with the Department, but since Red Cloud's treaty they repudiate his authority and leadership and acknowledge no chief but Sitting Bull. These are the only Indians within this superintendency in any way troublesome. Sitting Bull's tribe and other Sioux have been gradually moving into the northwest for several years past; receiving no aid from the

Government, they are compelled to follow up the large herds of buffalo, upon which they subsist almost exclusively.

Should these Teton Sioux offer any obstructions to the Northern Pacific Railway, a sanguinary war may soon be inaugurated. To prevent this, prompt and decisive measures should be taken.

The section of country lying between the one hundred and fifth and one hundred and eighth degrees of west longitude, bounded by the British possessions and south by the Missouri River, is well fitted, by its remoteness from white settlements and abundance of buffalo and other game, for a reservation for these Indians. This section is not adapted to white settlers, and no encroachment need be feared from that quarter. I respectfully submit that the proposition be made to them for their removal thence, and that they may be induced if possible to yield to the protection and care of the Government. The very favorable results which have been reached through the administration of Special Agent A. J. Simmons, at the Milk River agency, in regard to the Santee Sioux since their terms of peace with that agent, lead me to believe that similar means employed toward the Tetons might tend to the same result. To this end I think it would be policy for me to visit them at as early a date as possible.

These are the same Indians who killed McKnight last February, also a man by the name of Lee, and wounded another named Williams last May; all of which was done near the mouth of Musscleshell River.

A man named Brown was killed near the Crow agency last October, supposed by Arapahoes.

In conclusion, I desire to express to the Department my appreciation of the cordial assistance I have received from the several agents in this superintendency in my endeavors to better the condition of the Indians.

All of which is respectfully submitted.

Very respectfully, your obedient servant,

J. A. VIALI,  
*Superintendent Indians for Montana.*

Hon. COMMISSIONER OF INDIAN AFFAIRS,  
Washington, D. C.

---

No. 43.

CROW AGENCY,  
*Fort Parker, Montana Territory, August 31, 1871.*

SIR: I have the honor to submit my first annual report relative to the Indians of this agency.

I arrived at this agency on November 14, 1871, and relieved Brevet Captain E. M. Camp, United States Army, from duty as agent for Crow Indians, receiving from him the agency buildings and property pertaining thereto, also nine head of oxen, one cow, one horse, and one pair of mules, with about seven acres of ground prepared for cultivation. Hence you will readily conceive that I commenced here with little.

Being almost destitute of subsistence of all kinds, I immediately notified you, and you supplied me forthwith with ample supplies through the contractor, G. W. Black.

It is but justice to state that the Crow Indians deserve well the reputation they have always borne, as being peaceable and well disposed to ward the Government. They have conducted themselves well in all

respects toward the whites; have committed no depredations whatever; have confined themselves to their reservation, making occasionally hunting excursions on the unoccupied lands ceded by them to the Government, returning quite regularly, however, for provisions and such assistance as is provided for them, and express themselves well pleased.

Shortly after my arrival I received the annuity goods for all the Crows, and also for a portion of the mixed Bannack, Shoshone, and Sheepeater Indians, and as soon as the different bands of Indians could be collected, the goods were given to the chiefs and head-men, and by them distributed among the people. All seemed to be very agreeably astonished, both at the large quantity and good quality issued to them, and I think they were really sincere in their expressions of gratitude. The goods, with the exception of the socks, were certainly of the very best quality.

I beg leave to suggest, however, that if a portion of the money expended for socks and red and blue flannel could be expended for small blankets, (one and two points,) it would be of more benefit to the Indians, at the same time pleasing them; but as now only large blankets are purchased, the children have to wear a blanket large enough for a grown person, or a blanket is torn in two, which not only leaves it in bad shape, but soon ravel out and becomes worthless.

The amount expended for beaver-traps, if used for the purchase of sheet-iron kettles, would be of much more service to the Indians. In regard to the tin kettles now provided by the Department, I must remark that they stand very little fire, and soon wear out, and should be replaced by kettles of sheet-iron.

While the Crow Indians are well satisfied with the annuities furnished them, also with the subsistence in the shape of flour, meat, sugar, coffee, &c., they give several reasons for complaint against the Government for the non-fulfillment of their treaty in part. They say that they should receive directly the agreed-upon \$10 each year per head for all Indians roaming, and \$20 per head for each Indian engaged in agriculture; also one good American cow, and one yoke of oxen, which is claimed by them not to have been complied with in accordance with their treaty; and that it is not their fault, but the fault of the agent and those having charge of them that they have not advanced more in the pursuit of agriculture. They are very anxious that the above-mentioned fund should be applied to the purchase of American cows and brood mares, and as this is undoubtedly the most favorable stock-growing country on the American continent, I earnestly concur with them in their request, knowing very well that in a few years the country will be almost destitute of game of any kind, and the raising of beef cattle will be the most economical, as well as the easiest way for the Indians to subsist themselves.

Serious complaints are also made by them in regard to the whites, who, in place of being compelled to leave the Crow reservation, as was agreed upon in the Crow treaty, are coming on to it by hundreds, killing and driving the game; feeding and destroying the best of their grazing country by bringing into the country herds of cattle and horses; roaming at will from one end to the other; searching for gold and silver mines, of which the mountainous portion of the reserve seems to be well supplied; and it is owing to this great thirst for gold that all white men have that prevents me from being able to protect the Indians in their rights. The news of so many miners going to Clark's Fork has been a source of great anxiety and trouble to them; also so many strange faces passing and repassing along the heretofore quiet valleys, which but a

few years ago had scarcely been marked by the foot-prints of white men, taking their views, it can but bode evil to their future prosperity and happiness; in fact, while viewing it in the light they do, one can but help seeing it is too melancholy a subject to dwell upon, for past experience has taught those connected with the Indian Department that it seems almost impossible for the Government to protect the Indians in the rights guaranteed them by their treaties against the mountaineer and gold-hunter.

The Crow reservation contains about 6,000,000 acres of land; hence you will easily perceive the difficulty of preventing prospectors and miners from exploring the Crow country; and until the survey is made and the boundary established it is utterly impossible to keep such men out of the country. Consequently, on my arrival here last fall, I wrote (November 30, 1870,) in regard to this matter, urging the necessity of surveying the reservation immediately; also one on May 7, 1871, and still most earnestly urge that the survey be made as soon as possible.

The southern and eastern portion of the Crow reservation is very mountainous and is proving to be very rich in minerals of all kinds. Emigrant, Bear, and a number of other gulches have been mined a number of years, and some of the mines are quite successful. These mines are all on the Crow reservation, and they were located before the Crow Reservation was, consequently the miners claim the prior right. The new mines discovered this last season between the waters of the Big Horn and the Yellowstone River are also on the reservation, the most of them. In view of these facts, I have thought it best to suggest the propriety of purchasing that portion of the reserve from the Crows; for it will be very difficult to remove these miners from the country, for they look forward in great confidence to the day when these possessions will make them wealthy men, and it really seems to me that the purchase of this portion of the Crow country is almost the only way to settle the matter satisfactorily to all parties. I have talked with some of the leading and most sensible men of the tribe and they agree with me that the better way is to sell, if the Government will make the purchase.

In regard to this matter they are very anxious to visit Washington, and seem to think that a council and treaty entered into, face to face with the Great Father of both them and the white man, will be more sacredly lived up to by the whites. The wonderful stories that have been told them of what Red Cloud and party saw and heard and how well they were treated, has given the Crows quite an anxiety to go and see for themselves. The Crows, with one or two other tribes, are, I think, the only Indians that have never been East.

Another serious cause of complaint is on account of their country being overrun by war parties of Sioux Indians, making it almost impossible for them to feel any degree of safety for themselves or property; and I most earnestly urge upon the Department the necessity of immediate action in this matter to protect these Indians in their guaranteed rights, as they alone of all the different tribes of Indians have always proved themselves faithful and loyal to our Government. I would also, in connection with this matter, respectfully recommend that 100 breech-loading rifles be issued to them for their protection until the Sioux, Flat-heads, Nez Percés and other tribes of Indians can be induced to remain on their reservations.

The late raid of hostile Indians (Cheyennes and Arapahoes, or Sioux) into the Gallatin Valley, a short time ago, is another good reason why the Crows should be properly armed; they would act as a border guard

for the frontier settlements of the Territory, and by keeping hostile Indians from their home reservation, would be also the means of keeping them from the settlements.

In order to effectually stop illicit and contraband trade, to secure, arrest, and deliver to the proper authorities all unauthorized persons who may be found roaming at large on this reservation, and to protect these Indians in their rights, it is really essential to have a detachment of mounted troops for patrol duty at this agency. At present I have 25 Crows acting in this capacity, but they amount to very little, except to discover war parties of hostile Indians.

The Crow Indians are generally classified as Mountain and River Crows, the former so called on account of hunting and roaming near the mountains away from the Missouri River. The River Crows obtain their name from the fact of deserting the mountains and occupying the country along the Missouri River. They separated some twelve years since, but really comprise one large family, speaking the same language, having the same customs, the same enemies, and closely connected with each other through intermarriage.

The Mountain Crows now number about 2,700 souls, remnants of other tribes having joined them and identified themselves as Crows. Their country being overrun by Indians and whites, the natural consequences is a scarcity of game, and their chief reliance for subsistence is this agency.

The River Crows amount to about 1,400 souls, and have been attached to this agency since I took charge of it, receiving their annuities here, and also got subsistence in the shape of flour, beef, and such other assistance as is provided by Government, whenever they were in need of it, and express a strong desire to locate permanently with the Mountain Crows, except about 20 lodges, who are still with the Gros Ventres in the vicinity of Camp Cook, Montana Territory, on the Missouri River. The Indians tell me the principal reason for these lodges remaining in that country is because they can trade for whiskey any time they feel like getting drunk.

In regard to Bannacks, Shoshones, and Sheepstealers, mentioned before, owing to repeated difficulties between them and the Crows, on account of horse-stealing, they all have been called back to their old home, I think on Salmon River, or near there, with the exception of a few lodges who have joined the Crows, and intend making this their permanent home.

There are also connected with this agency about 20 families of mixed-bloods, individuals of almost all castes and grades, that have, through the consent and wishes of the Crow tribe, become a part of said tribe in accordance with articles Nos. 2 and 6 of the Crow treaty, and have mostly located homesteads, and gone to work with some degree of industry, which has a tendency to encourage the Crows, and seems to be already beneficial to them, and I have this far assisted them to the extent of my power. In this connection, I beg leave to refer again to the necessity of a survey of this reservation, as it would very much facilitate the business of locating and recording said individual homesteads, and do much to encourage individual industry.

On the first of February last a party of Snake Indians arrived at this agency, and had with them a young girl, of very light complexion, about fifteen years old, which they claimed to be a half-breed, belonging to Pocatilla's band of Snake Indians. A few days after their arrival with her, a couple of men arrived at this agency in search of said girl, claiming her to be a white girl, taken prisoner by Pocatilla's band, after mur-

dering their parents in the year 1862, on or near Raft Creek. From other information received in regard to her, this story appears to be corroborated, but I have failed to get any reliable information. The girl insists that she is a half-breed Snake, but claims to have had a little brother very much like her, when she was a little girl, and it is supposed by some that a little boy taken by General Connor, while on his expedition against those Indians at Soda Springs, in Utah, was her brother. After hearing this report I wrote to General Connor for information in regard to the case, but have failed to get an answer from him. Having no provisions made for her here, and knowing she would be better cared for under the immediate supervision of the superintendent of Indians for Montana, (J. A. Viall,) I sent her, on March 16, 1871, in care of Robert Hereford, at that time the Snake interpreter, to Helena, Montana. Since then she has remained under the immediate supervision of the superintendent, and I understand is getting quite contented, and is making considerable progress in reading and learning to be a white girl.

In regard to the buildings of this agency, I must say that they are of little account, being of sawed, cottonwood logs, cottonwood shingles, and one story high. Belonging to the agency there are three corner buildings, three rooms each, 15 feet square; one used as resident for the agent, one as hospital and quarters for surgeon, the other as mission house; five buildings, two rooms each, used as quarters for engineer, miller, farmer, blacksmith, and teacher, and mess-room for employes, and two buildings used as warehouses, 45 by 15 feet each.

None of these buildings are properly suited for the purposes for which they are used; all need repairing, all of them should be raised, and have a pine roof and pine shingles; they should also be weatherboarded and plastered, for reasons hereafter given. The probable cost to put these buildings in thorough repairs would be \$5,000. This sum may seem a large amount, but it is really needed, if the buildings are to be put in a habitable and comfortable condition. The agency was built of green cottonwood lumber, and though substantially performed, owing to the great shrinkage of such lumber, the space between the logs needs constant chinking and plastering, the winds during the fall and winter being of such force as to blow the plastering and even the chinking out, leaving the buildings uninhabitable. This can only be remedied by weatherboarding, lathing, and plastering. The shingles being cottonwood, have, under the influence of the weather, been twisted out of their original shape, and no longer serve the purpose for which they were intended.

In compliance with the wishes of the Indians, and to encourage them in every possible way, I contracted in April last with C. W. Hoffman for 25 double-houses, 24 by 16 feet, to be erected on this reservation, of which 21 are finished and inhabited by Indians who declared their intention to become farmers.

The old Indians are generally very much opposed to labor, and the most must be expected from the young of the tribe. The houses are built in the vicinity of this agency, one being occupied as a council-house. Indications are, that if there were houses enough for all, there would not be many that would remain in lodges. Another house is built on Yellowstone River, and is used as a dwelling for ferry-man and temporary shelter for supplies until they can be brought to the agency.

In regard to the crossing of the Yellowstone, it should be well understood that it is one of the most dangerous streams in the mountains to ford, with the exception of a few months in the latter part of the summer season.

In compliance with instructions in January last, I took charge of the ferry-boat and all pertaining to it, on account of the United States Indian Department, and everything went satisfactorily until the 26th of May last, when the wire-rope broke while the ferry-man was returning to this side of the river, after crossing the mail to Bozeman, Montana Territory, letting the boat go down the river. Neither boat nor anything pertaining to it was saved, and the ferry-man came near losing his life, but finally succeeded in swimming ashore. I immediately applied for permission to build another boat or bridge; it would probably cost for material \$500, or to build a good substantial bridge, which would be cheaper in the long run, \$2,000, and I hope to get authority to let the contract this fall, for in either case it can be done much cheaper now than in the spring of the year.

A stable in L form, 100 feet on one side and 50 feet on the other, by 16 feet wide, has been built by the employes of the agency, with room for hostler and forage, able to afford stabling for 24 horses, with a substantial corral of sawed plank, 34 by 84 feet, for storing hay and grain, attached to it. Also, a good substantial cattle corral, 125 by 100 feet, has been built. A building to cover engine and saw-mill is now in progress of erection.

In order to carry out farming operations on a more extensive scale than heretofore, and to encourage the Indians in every way possible, I contracted last spring for 800 rods of irrigating ditch and the breaking of 75 acres of land, and I am glad to inform you that the undertaking has been quite a success. Everything put in the ground has done much better than I anticipated. In addition to the 61 acres broke under the above-named contract, I succeeded in getting 40 acres more under cultivation, besides 3 acres of garden, making more than 100 acres in all. In connection with this, I would state that Wolfbow having complied with the requirements of Article 9 of the Crow treaty made and provided in the premises, I turned over to him one good American cow and two good, well-broke work-oxen.

The irrigating ditch is large enough to afford sufficient water for all farming and gardening purposes of the agency, besides for much more land than is liable to be cultivated by the Indians this coming year. Owing to the unusual high water from the Yellowstone River inundating the wheat crop and a part of the barley, there will be but a small yield, but it shows plainly what can be done here by properly cultivating the soil. The grasshoppers also visited this vicinity long enough to do considerable damage to the small grain, and to set back the potatoes, turnips, and other vegetables, for a considerable time.

About three miles of fencing, to inclose farm, garden, and hay-field, have been completed and put up by employes; also, about 150 tons of hay cut, and all the necessary farm and garden work performed. For further particulars I refer you to the accompanying statistical table.

I. N. Parker, late teacher at this agency, having died January 6, 1871, the agency was without a teacher until April 25, 1871, when J. H. Aylsworth was appointed to the position. Mr. Aylsworth is a hard-working, energetic man and Christian, and in earnest in his endeavors to accomplish something in his school, and is doing as well as can be expected.

Under the circumstances quite a number of the scholars have learned their letters, and a few to spell in two syllables. Much, certainly, cannot be expected in so short a time. To have the work go on properly, there should be an interpreter and a matron to assist the teacher, at a cost probably of \$1,000 per annum. For particulars see accompanying statistical table.

In addition to the school now in operation, a building for manual labor and boarding-school is very much needed. The probable cost of building, furniture, and fixtures, would be about \$2,500. This would be of immense benefit. Although, as always is the case, the old Indians are averse to labor, the younger ones have shown themselves very willing, in fact eager, to accomplish something that they see will ultimately benefit them.

There should be 50 acres set aside for this school, and I have no hesitation in expressing my opinion that plenty of willing hands would be ready to till the same.

A 12 horse-power engine, with saw-mill and shingle-machine, is now in operation at this agency. The engine has only power to drive either saw-mill or shingle-machine separately. I would therefore respectfully recommend that a 40 horse-power engine and a grist-mill be purchased for this agency, in order to run saw-mill and shingle-machine at the same time, and having power besides to keep a grist-mill in operation, which is very much needed here for the Indians. The probable cost of engine and grist-mill, including transportation, would be about \$10,000. In conclusion, I beg leave to transmit herewith report of physician in regard to the sanitary condition of the Indians under my charge; also report of teacher in regard to progress of education.

Very respectfully, your obedient servant,

F. D. PEASE,  
*Agent for Crow Indians.*

J. A. VIAL, Esq.,  
*Superintendent of Indians for Montana, Helena, Mont.*

---

No. 44.

CROW AGENCY, MONTANA,  
*September, 1871.*

SIR: For the educational department of the Crow agency I have the honor to report as follows:

I arrived at the agency on the 25th of April, A. D. 1871. There was no school, nor any trace of one. Many of the Indians, with their families, had just gone out for their spring hunt, so that comparatively only a small proportion of the children remained at the agency. With these I commenced operations, and soon had the satisfaction of seeing them become interested in trying to learn. Others have come in school from time to time, until of late the average attendance has reached 32 to 34. About 9 learned the alphabet, and 3 to read the simple lessons of Hildard's First Reader.

Their former migratory habits somewhat interfere with their progress in learning, and it would be well if the children, as far as possible, could be removed from these migratory influences.

The importance of establishing some kind of mess, or boarding-house, where the children would be measurably under the care of a matron; or of starting some kind of manual-labor school, in which agricultural and mechanical labor might be combined with book knowledge, cannot be overestimated.

"Labor is degrading" is the first article in the Indian's creed, and to eradicate this mischievous notion, like caste in India, requires proper training of the young, for as the twig is bent the tree's inclined.

I am much in need of an interpreter to enable me to make the lessons properly understood.

Yours, respectfully,

J. H. AYLSWORTH,  
*Teacher of Crow Indians.*

F. D. PEASE, Esq.,  
*Agent Crow Indians, present.*

No. 45.

FLATHEAD INDIAN AGENCY,  
*Jocko Reservation, Montana Territory, September 1, 1871.*

SIR: I have the honor to present herewith my first annual report of the condition of Indian affairs within the limits of this agency, of which I assumed control on the 17th of October last, having on that day relieved Lieutenant George E. Ford, United States Army, acting agent in charge.

The official receipts then passed, and now on file at Washington, together with the quarterly property returns subsequently rendered by me in accordance with regulations, will show the quantity, quality, and condition of the public property here at that time, since, and now.

Immediately upon assuming charge I caused the fences, which were in a very dilapidated condition, to be thoroughly repaired, and then completed the erection of a new log-building for kitchen and mess-room, the foundations of which had been commenced by my predecessor. During the present season about 40 acres of tolerable farming land have been under successful cultivation, planted as follows: 26 acres in oats, 8 in corn, 4 in potatoes, and 2 in garden vegetables. The product cannot now be estimated with accuracy, but that it will be sufficient for the subsistence, in part, of the employes connected with the agency, and for the animals belonging to it, as well as some to spare for destitute Indians, there can be no doubt. About 18 tons of hay have also been cut, and hauled from a distance of two miles to the agency, for the use of the animals during the coming winter. Wheat has not been sown this season, because past experience here proves it to be unprofitable, partially on account of the nature of the soil, but particularly at this time for the want of a good grist-mill, rendering necessary the transportation of wheat in bulk a distance of twenty-five miles to be ground into flour, and returned, the effect of which is so to enhance the cost as to render it more economical to purchase from time to time such supplies of ready-made flour as the necessities of the place may require.

The report made to the President by the Indian peace commission, January 7, 1868, and published in the report of the Commissioner of Indian Affairs for that year, states the numbers of the tribes under the control of this agency, as follows: Flatheads, 558; Pend d'Oriettes, 918; Kootenais, 287; making a total of 1,763. An actual count of the Kootenais, made under my own observation shortly after arriving here, shows 318 members of that tribe, an excess of 31 over the estimate of the commissioners as above stated. Although I have had no opportunity to test the matter practically, as in the case of the Kootenais, yet I am satisfied from general inquiry, as well as from close observation, that the excess of numbers is quite as great *pro rata* among the Flatheads and Pend d'Oriettes as among the Kootenais, making the aggregate of the three

tribes not less, probably, than 1,900. Their material condition will be seen from the following data, relating to the Pend d'Orielles:

Number of farms cultivated, 70, varying in size from 5 to 60 acres, and averaging 15 acres.

Crop of 1870: Wheat, over 3,000 bushels; oats, about 900 bushels; potatoes, about 1,000 bushels; corn, about 100 bushels.

Amount of live stock: Horned cattle, about 800 head; hogs, about 100 head; horses, over 2,000 head.

*Flatheads proper*.—Number of farms cultivated, 35, averaging 12 acres each.

Crop of 1870: Wheat, 2,000 bushels; oats, about 5,000 bushels; potatoes, about 650 bushels; corn, about 60 bushels.

Amount of live stock: Horned cattle, about 600 head; hogs, about 100 head; horses, about 1,100 head.

The Kootenais have nothing. They are idle, thriftless, improvident, and dishonest. They must not be confounded with the Upper Kootenais, living outside the jurisdiction of this agency, a very different class of people, moral, high-toned, and christianized, and from whom the branch here were driven many years ago on account of their vices and dishonesty. The sanitary condition of these tribes continues to be good, comparing favorably with that of other neighboring ones, as reported to me from time to time by Dr. McKee, the agency physician.

Spiritually, the Flatheads and Pend d'Orielles are under the direction and teachings of the Roman Catholic church. Nearly forty years since some Iroquois from Canada, trading with the Flatheads, told them of the teachings of the Jesuit fathers, who for many previous years had been laboring among them, both for their spiritual and temporal good. The Flatheads, listening to these narratives of wonder and love, and as if directed by inspiration from above, selected some of their best men, rude and savage warriors, to proceed to St. Louis and ask a mission to teach them "the ways of the cross." Wending their way through the then almost trackless wilds between here and St. Louis, the delegation found itself among a hostile band of Sioux, on the western borders of Missouri, only to be murdered, but one escaping to tell the fate of the rest. In the following year, another and a larger delegation was dispatched on this heaven-inspired duty, which succeeded in reaching the object of their destination, and prevailing on Father De Smet to accompany them to their wild mountain homes—the Flatheads thus becoming the first spiritual children among the red men of that venerated and distinguished Catholic missionary. Located among them, the Pend d'Orielles soon sought his teachings, and bending their necks to the Christian yoke, both tribes in aggregate were duly received into the church, and, to this day, although subject to failings and short-comings, like the rest of humanity, they (particularly the Flatheads) will compare favorably, at least in morality, with a like number of people anywhere.

The earnest and energetic measures adopted by you in order to secure the entire suppression of the whisky traffic among the Indians have met with my zealous co-operation, and it is a subject of sincere congratulation that at the last term of the United States district court, held at Deer Lodge City, two white men, convicted of selling whisky to the Indians under my charge, were sentenced to the penitentiary, one for eighteen months, and the other, who plead guilty and asked for the mercy of the court, for a period of six months. The moral effect of these convictions, the first of the kind in the history of Montana, cannot be overestimated, and indeed it has ever since been sensibly felt in the

general quietude and exemption from violence prevailing at all points within the limits of this reservation to a degree not before known.

The supply of flour, which you so humanely authorized to be purchased during the past winter for the use of the necessitous among these tribes, was equitably distributed among them, and was productive of incalculable good by preventing a great amount of suffering, which I am confident would otherwise have occurred. Quite an equal amount will again be necessary for the coming season, for, in addition to the causes ordinarily operating to produce want among them, I have to report the entire failure of the crops belonging to the Pend d'Oriettes, caused by the depredations of immense swarms of crickets, which, during the absence of this tribe on the summer hunt, have devastated the little fields belonging to them, leaving nothing but a barren waste in their tracks. The Flatheads, though not so unfortunate in this respect, have more than an offset in the loss of eighteen of their best men, heads of families, killed in a fight with the Sioux about the 1st of July last, a terrible loss compared with the whole number of fighting men (about one hundred) belonging to the tribe prior to that time. The Sioux, who ambuscaded and attacked the party, afterward stated that it was done through mistake, under the impression that they were Crow Indians.

Subjects of great and paramount importance connected with the interests of this agency have from time to time been brought to the consideration of the Department at Washington through you, in communications from me, dated as follows: November 17 and December 8, 1870; January 23, January 19, and May 25, 1871. The first had reference to the removal of this agency to a central and more desirable point on the reservation. The second and third, and by far the most important, both related to the removal of the Flatheads proper from the Bitter Root Valley, where they now are, to this reservation. I say most important, because, considered in any and every point of view, whether in regard to the best interests of whites or Indians in that valley, there is no measure so indispensably necessary to the future well-being of both races as the one in question. Justice and good policy, as well as every consideration of common humanity, unite in demanding that this long-agitated subject should be definitely and promptly settled. The fourth of my communications, to which reference is herein made, was in response to the departmental school circular; and the fifth was in the form of a requisition for farming implements to supply the pressing wants of the tribes in that particular.

I cannot conclude without calling the special attention of the Department to the one relating to schools, dated January 19, 1871, accompanied as it is by a most interesting and valuable letter from the Rev. F. L. Palladino, S. J., in charge of the mission school on this reservation, in which the details connected with that subject are so fully given that I do not deem it necessary to duplicate the information in this report.

I am, sir, with great respect, your obedient servant,

C. S. JONES,

*United States Indian Agent.*

HON. JASPER A. VIALI,

*Superintendent of Indian Affairs, Helena, Montana.*

## No. 46.

[Through J. A. Viall, esq., superintendent Indian affairs for Montana, Helena, Montana.]

BLACKFOOT INDIAN AGENCY,  
*Teton Valley, Montana Territory, September 1, 1871.*

SIR: In accordance with instructions, I have the honor herewith to submit my report for that portion of the present year commencing April 1 and ending August 31.

I came to this agency in company with Superintendent Viall on the 1st of April last, and relieved Mr. M. M. McCauley, my predecessor, taking possession of and receipting for all Government property pertaining hereto. I found but a very small quantity of provisions, and scarcely anything else suitable to the wants of the agency, 600 pounds of corn and 200 pounds of flour constituting the bulk of supplies on hand.

The agency buildings were generally in a dilapidated and neglected condition, and the whole stockade inclosure encumbered with filth. Of implements and tools there were none, with the exception of a broken and much-worn mowing-machine, entirely unfit for use; and taken together with the prejudices and dislikes of the Indians then encamped here, the general aspect of affairs was most discouraging.

Shortly after our arrival, Superintendent Viall called the chiefs and head-men together, and in a protracted and tedious council explained to them very clearly and minutely everything with reference to the policy of the Government concerning them, the amount of annuities they were to receive, &c. With regard to their annuities, they entertained some very extravagant ideas, the result of about 825 Piegans and Bloods having received all of the goods sent to this agency for the year 1870, while the great majority of the nation had received nothing, but were expecting a proportionate allowance. At the termination of the interview, however, after having listened with much seeming interest to Superintendent Viall's explanations and assurances of the kindly intentions of the Government toward them, they expressed their submission, and seemed comparatively satisfied, expressing a strong desire to remain at the agency and learn to farm and cultivate the soil.

## NUMBERS AND INCLINATIONS.

The Blackfoot nation of Indians comprises the Blackfoot, Blood, and Piegan tribes; of these, the Blackfeet are the most numerous. As nearly as I can ascertain, the respective numbers are as follows:

| Tribes.         | No. of lodges. | No. of people. |
|-----------------|----------------|----------------|
| Blackfeet ..... | 600            | 3,000          |
| Bloods .....    | 350            | 1,750          |
| Piegans .....   | 550            | 2,750          |
| Total .....     | 1,500          | 7,500          |

The Blackfeet and Bloods are much together, traveling and hunting through about the same range of country, and during the summer months frequently go as far north as the Hudson Bay trading-post on the Elk

River, in the British possessions, a distance of between two hundred and two hundred and fifty miles from this point. The Piegans, more attached to their home, as they are learning to term the agency, do not extend their hunting excursions so far, but remain nearer, so that bands of them are coming and going to and from the agency and their main encampment constantly.

Aside from these large encampments, who are compelled on account of their comparatively small appropriation for annuity supplies to still retain their original habits of hunting and the chase for a sustenance and support, there are a few lodges, or families, who make their homes in the immediate vicinity of the agency. The principal occupations of these are raising and trading horses and tanning hides and furs.

There have no treaty stipulations ever been entered into by the Government with the Blackfoot nation, nor boundary-lines to their reservation established. They seem, however, to be governed by imaginary boundary-lines, and express themselves as perfectly willing to remain in what they consider their own country. They are very peaceably inclined; and since my stay here there has not been a single act of hostility or violence toward the whites by any Indian belonging to this agency.

#### FARM AND FARMING.

Previous to the present season there has been no farming done at this agency, notwithstanding the fact of its being situated in a fertile valley and surrounded by rich tillable soil. As soon as practicable I took steps toward cultivating a farm, but before "breaking" plows, together with the services of teams, could be secured and the land plowed, the season had become so far advanced that I very much feared the crops would not mature before early fall frosts. I, however, planted about 75 acres, as follows: Wheat, 10 acres; oats, 18 acres; barley, 15 acres; potatoes, 12 acres; turnips, 10 acres; onions, 2 acres.

The balance of the ground I planted with garden-vegetable seeds, viz: beans, peas, corn, carrots, cabbage, beets, lettuce, cucumbers, &c.

In consequence of the dryness of the atmosphere and scarcity of rain the farm and garden have had to be watered by means of irrigation, for the accomplishment of which I had constructed during the early part of the summer a substantial aqueduct or irrigating ditch nearly a mile in length, with a capacity sufficient for irrigating 200 acres.

At the present writing the grain is being harvested, but, unfortunately, as I had apprehended, the early frosts have considerably damaged the crop, though the different varieties of root vegetables flourish successfully, and seemingly have not been injured by the frosts. Of the garden vegetables I have issued quite a large amount, since they attained an eatable size, to the Indians.

Immediately after sowing and planting I had the farm inclosed by a substantial fence, which has successfully resisted all incursions from the large herds of Indian horses which are and have been constantly feeding in the vicinity of the agency.

#### BUILDING IMPROVEMENTS.

As before stated, the agency buildings on my arrival were in a dilapidated condition, and improvements on them have progressed but slowly since that time owing to the scarcity of lumber. The nearest point from which lumber can be obtained is Helena, in this Territory, about one

hundred and twenty-five miles distant from this place. Upon my requisition Superintendent Viall sent me 5,670 feet, which arrived about the middle of June. This I expended as judiciously as possible, but found the amount entirely inadequate to complete the improvements which I desire and consider necessary to make. I have therefore sent to Superintendent Viall asking for more lumber, which he has informed me he will send, and upon its receipt I shall push vigorously to completion the work of improvement.

#### EDUCATIONAL.

As yet I have had no school at this agency, for the reason already named, *i. e.*, a scarcity of lumber, on account of which I have been unable to fit up a school-room. I have, however, recently made out a requisition to Superintendent Viall for school-books and other school appurtenances, and when they are received I shall open a school. Present prospects indicate an attendance of about 60 scholars.

#### SANITARY CONDITION.

During the summer and at present the sanitary condition of the Indians, with the exception of a few prevalent cases of colds and other transient ailments, is good. Deaths by disease are rare occurrences.

#### WHISKY TRAFFIC.

The greatest prevailing evil now extant among the Indians, one which has caused much trouble and bloodshed, and which is being indulged in to an alarming degree, almost constantly, is the whisky traffic. This nefarious business is being extensively carried on in spite of the law or its guardians, who are by far too weak in numbers to effectually compete with the force and capital engaged in it.

The British lines being but seventy miles north of the agency and one hundred miles from Fort Benton, the whisky traders are afforded a safe harbor should they be pursued; and the scope of country through which they pass from outfitting is of so wild and rugged a nature that ample opportunities for hiding not only themselves but their stocks in trade, should circumstances require, are offered.

Some of them have been caught and prosecuted, and such instances have helped to intimidate other offenders and to diminish the proportions of this lawless business, but there is still much to do to stop the trade entirely.

The effects of the whisky trade are exceedingly dangerous to the public peace. It not only impoverishes the Indians and incapacitates them for civilization, but it is the cause of a great deal of trouble between the Indians and white settlers. If an injury is done an Indian by a white, it is the Indian nature to hold the whole white race responsible, and the natural consequences of the whisky trade are very clear to anticipate.

The Blackfoot nation are at present peaceably and friendly inclined toward the whites, and if this whisky traffic can be broken up and liquor kept from them they will continue so. I would respectfully ask, and earnestly hope, that this matter may receive the attention of the Department, and that immediate steps may be taken to render you additional assistance in the abolishment of the Indian whisky trade.

In conclusion, I will say that great credit is due Superintendent Viall for the interest he has evinced in the improvement of the agency and

the Indians belonging to it. It was owing in the main to his exertions that I was enabled to cultivate a farm at the agency this season.

I am, sir, very respectfully, your obedient servant,

J. ARMITAGE,

*Agent for Blackfeet and others.*

The Hon. COMMISSIONER OF INDIAN AFFAIRS,  
*Washington, D. C.*

---

No. 47.

FORT BROWNING, MONTANA TERRITORY, *August 31, 1871.*

SIR: I have the honor to submit this my first annual report concerning the condition of affairs at this agency.

The tribes belonging here and under my charge are the Assinaboines, Gros Ventres of the Prairie, River Crows, and more recently large bands of Santee and other Sioux, who, having roamed for a number of years without being under the supervision of the Department, or receiving anything therefrom, have now, with its consent, attached themselves to this agency. These Sioux number as follows: Santees proper, under Standing Buffalo's brother, about 2,500; Yanktons, Yanktonais, Cut-heads, and others, under Medicine Bear as principal chief, about 4,300.

Every effort in my power has been made to induce them to go to the Sioux agencies east, but without effect. They close their ears to my words of advice in this regard, and assign some cogent reasons for their conduct. They declare they will remain in this country, and urge that they may receive supplies and be treated as other Indians are at the agency. I have issued flour and other supplies to them for the last four months, during which time they have behaved remarkably well.

A portion of the Northern Cheyennes and Arapahoes have lived all summer with the Gros Ventres, and inform me that the whole encampment is coming here to winter with them. These Indians and the Gros Ventres were formerly the same tribe, and still speak the same language. They are friendly, and regard each other as the same people. They can be united and placed on the reservation together if deemed advisable.

In addition to the above-named tribes, small bands of the Crees, Chippewas, Desotos, and others, who live mainly in the British territory, frequently visit the agency in great destitution, and it is found impossible to avoid giving them some relief.

The country occupied and claimed by these tribes as their hunting-grounds extends from the mouth of Milk River, in about 106° west longitude, to the west of Bear Paw Mountains, in longitude 110°, and north from the Missouri River to the boundary line between the United States and the British Possessions, and on the north side of Milk River to about longitude 111°, embracing an area of about 30,000 square miles. This territory has never been set apart and established by Congress as an Indian reservation, yet practically it is exclusively "Indian country," being so regarded by the citizens of Montana and the Indian Department. It does not contain a white settlement, and, with the exception of some persons along the Missouri River engaged in chopping wood for steamboats, and a few migratory trappers, hunters, and wolfers, its only white inhabitants are in the employ of the Indian Department or Indian traders. The general character of the country

is low, rolling hills and open prairie, with but two small isolated mountain ranges in its whole extent. As a whole, it may be stated a vast plain, with but little timber, and poorly watered, but covered with a luxuriant growth of nutritious grasses, which in the fall, under the influences of the climate, becomes cured hay.

The Sioux occupy the eastern portion of the reservation, from the agency to the mouth of Milk River. Red Stone's band of Assinaboines range through the center north and south of the agency. The Gros Ventres, Upper Assinaboines, River Crows, and Northern Cheyennes and Arapahoes occupy the western portion, and the River Crows and Gros Ventres frequently hunt in the Judith Basin, on the south side of the Missouri River. About one-half of the River Crows are encamped with the Gros Ventres, and came to the agency with them a few days since; the balance are at Camp Cook, an Indian trading-post on the Missouri River. The North Assinaboines generally hunt in the northern part of the reservation and across the line into British territory.

The Indians attached to and receiving their supplies here having increased to more than twice their original number by accessions during the summer, it is therefore of the most urgent necessity that additional supplies be furnished to meet their wants through the coming winter. All of these tribes have managed to procure their own meat during the summer, chiefly from the buffalo that range in this country. They have received flour and other supplies from the agency, but no meat has been purchased for them except a little bacon, which has been issued only in cases of emergency to hunting parties. I have given all the encouragement in my power to keep them constantly hunting, not only to provide meat for present use, but to cure and store a quantity for winter.

The buffalo are being rapidly killed off. It is estimated that 50,000 have been slain during the past summer on the hunting-grounds of these tribes.

They appear to fully appreciate the fact that the game will in a short time disappear, as it did from the hunting-grounds in the eastern country, which they formerly inhabited, and that it will necessitate a change in their mode of life. Some of the chiefs have told me that they have now no other place to go, and will die here with the buffalo unless provided for by the "Great Father." They talk a great deal about farming, and desire the means to learn and engage in it, so that, as Red Stone, head Assinaboine chief, says, "my people may live after the game is dead." Not taking charge of the agency until the 1st day of April last, it was too late, under the circumstances, to put in any crops this season. The soil and climate are favorable to farming, and it can be successfully prosecuted. I deem this a matter of such importance that I will submit, at an early day, a special communication, with recommendations for locating and establishing farms where water can be procured for irrigation, and asking that means be placed at my disposal for carrying out the wishes of the Indians; also in reference to the establishment of schools and missionary labors, and estimates for construction of school-houses, residence of teacher, &c.

While it is impossible to prevent forays, stealing, and warring expeditions to neighboring tribes, yet I am happy to state that no war parties from the Sioux or any tribes under my jurisdiction have gone to the settlements or committed any depredations upon the whites since I assumed charge of the agency. With necessary supplies and subsistence furnished by the Government, and proper care, attention, and advice on the part of the agent, there will be but little difficulty with these tribes in maintaining their present peaceful relations with our

people, and in procuring their gradual abandonment of the chase and the war-path for the peaceful pursuits of agriculture, as the initiative step toward their civilization.

Very respectfully, your obedient servant,

A. J. SIMMONS,

*Special United States Indian Agent for Milk River Agency.*

J. A. VIALI, Esq.,

*Superintendent Indians for Montana.*

No. 48.

LEMHI VALLEY, MONTANA TERRITORY,

September 1, 1871.

SIR: I have the honor to report to you that, in obedience to instructions given me in the latter part of March last, I proceeded to the camp of the mixed band of Bannacks, Shoshones, and Sheepstealer Indians, numbering in all about seven hundred, in a valley about twenty miles above the mouth of the Lemhi Fork, suitable for agricultural and grazing purposes, and immediately made preparations for building, fencing, plowing, and making such other improvements as were necessary for the comfort of the Indians, and to provide, as far as possible, for their sustenance and maintenance during the coming winter.

I fenced in about 400 acres of land, and plowed and cultivated about 60 acres of it, which, this year, yields a very good crop of potatoes, wheat, and turnips. I also constructed an irrigating ditch, nearly two miles long, to carry water to the part of the farm under cultivation, and have erected three log store-houses for storing away the fish which the Indians catch and dry for use during the winter. They have this season caught and dried about 30,000 pounds, which I have carefully stored away.

I have also erected three log dwelling-houses for the use of employes, and have constructed two root-houses for stowing away vegetables raised on the farm for the use of the Indians.

The condition of the farm and the produce from it this year is quite as good as could possibly be expected, considering the small appropriation provided for its improvement and the fact that it has been only about six months since work was commenced to reclaim it from wild lands.

Many of the Indians show a willingness and disposition to work and to become civilized, but, of course, cannot be expected to do much until they have had instructions and learn from experience something about farming. With proper means they can be made self-sustaining in three years. They are good workers, and all they want is something to work with.

In conclusion, I respectfully suggest that a permanent reservation, large enough to give the Indians a sufficiency of agricultural, grazing, and fishing ground, be set apart for them at the place where they are now. They are strongly attached to it by the happy associations of years, and their ancestors for many generations have been buried here, which is one of the strongest ties that bind the Indian to any locality.

Very respectfully, your obedient servant,

A. I. SMITH.

J. A. VIALI,

*Superintendent of Indian Affairs, Montana Territory.*

No. 49.

WAR DEPARTMENT,  
*Washington City, August 10, 1871.*

SIR: In connection with War Department letter of the 16th of June, stating that copies of your communication and inclosures relative to certain Santee, Yankton, and other Sioux Indians, had been referred to the commanding general of the Department of Dakota, I have the honor to inclose herewith, for your information and consideration, extracts from the reports of the commanding general of the Department of Dakota, and other officers having knowledge of these Indians, and a copy of an indorsement expressing the views of the General of the Army on the subject.

From these reports will be seen the desirability of maintaining friendly relations with the Indians now in Montana, at least until the spring opens, when the Government will be in much better condition to quell any hostile demonstration made by them; and as a matter of expediency, as well as kindness to the Indians themselves, I would suggest that while peaceable they be allowed to remain in their present locality, and be supplied with rations the same as other Sioux Indians in that agency who are friendly to the whites, and thus give them an opportunity for improvement.

Very respectfully, your obedient servant,

WM. W. BELKNAP,  
*Secretary of War.*

The Hon. the SECRETARY OF THE INTERIOR.

ST. PAUL, MINNESOTA, July 18, 1871.

[Extract.]

Before leaving Benton, I had learned of the presence of these Indians in Montana, in the vicinity of the Milk River agency, and that they had announced their intention of remaining there. Any attempt to remove them forcibly would bring on a war with these bands, in which, in all probability, other bands of the Sioux would become involved. As it seems the policy of Government to remain at peace with the Indians, when possible to do so, and as appropriations have been made for issuing rations to the Sioux, it would seem to me good policy to issue these Indians their rations at the Milk River agency, and endeavor to keep them quiet in this way. Should this fail, the only course left would be to drive them out of that country.

In my opinion, the Assinaboines and Gros Ventres, who occupy that country, will not bring on any difficulty with the Sioux, and will only fight them in self-defense.

It seemed to be the opinion of the people living at Benton, that the Blackfeet, Pie-gans, and Bloods would go into the British Possessions, and remain there, owing to the presence of these bands of Sioux in that vicinity. The general opinion seemed to be that the Sioux, who had already arrived in that country, were only the forerunners of larger numbers, who were on their way, attracted by the large herds of buffalo in that region. I have no information in regard to these bands of Sioux that was not derived from the agent, Mr. Simmons, and that is not embraced in his report.

W. H. LEWIS,  
*Major Seventh Infantry, Special Inspector.*

HEADQUARTERS DEPARTMENT OF DAKOTA,  
*St. Paul, Minnesota, July 28, 1871.*

[Extract.]

In addition, special instructions have been given to Colonel Gibbons to ascertain, and from time to time report, what are the intentions, temper, occupation, &c., of these Indians.

In the mean time, I forwarded this paper inviting attention to the indorsement of Major W. H. Lewis, Seventh Infantry, whose views, as therein expressed, are coincident with my own.

This indorsement furnishes all the information necessary for a practical determination as to what is best to be done, as matters stand at present. If these Indians are fed and allowed to remain where they are until they commit some overt act of hostility, either against us or friendly Indians under our protection, I believe the matter would be judiciously disposed of. In this event, the Gros Ventres and Assinaboines should be satisfied or compensated for this occupation of territory, which has been recognized as theirs, which can be easily and readily done, and the Sioux should be notified of the condition on which they are permitted to temporarily or permanently remain.

The feeding of Indians I have no control over, and therefore cannot act in that direction. I believe, eventually, we shall have trouble in that section of the country, which will make it necessary for us to settle the Indian question there probably by a resort to force.

We have not the cavalry nor other force in Montana, or high up the Missouri, at mouth of or above the Yellowstone, to permit us to think of settling this question at the present time. I think the eventual settlement of it should be deferred, if possible, until the Northern Pacific Railroad is well advanced westward. I think it would be wise to increase the force of cavalry in Montana as soon as practicable, in order to intimidate these people from committing acts of hostility, as far as possible, and give us the delay we wish before being forced to meet the question with arms. This very delay may give the Indians wiser views, and enable a final settlement to be made without resort to any great amount of force. In this precautionary measure, I would also recommend that additional troops, cavalry, be sent as soon as practicable to Fort Buford. Knowing how much the War Department is harassed by applications for more troops, I do not present these views with the expectation that immediate action can be taken upon the recommendation for more troops, but the sooner action can be taken the better.

If the Interior Department decide to feed these Indians where they now are, I should like to be advised of the fact, as it might influence action hereafter in certain contingencies.

WINF'D S. HANCOCK,

*Major General, United States Army, Commanding.*

HEADQUARTERS MILITARY DIVISION MISSOURI,

*Chicago, August 3, 1871.*

[Extract.]

It has been my belief for the last two years that a difficulty with these Northern Sioux cannot be avoided, and that it is only a matter of time, and not very long time either, when it will take place. We are certainly not prepared for it, and cannot be until next spring, and I therefore recommend that all the concessions possible be made in the way of issues to these Indians, wherever they may be, until we can get more troops on the Upper Missouri. I have repeatedly directed attention to the concentration of a good-sized force at Buford, but the War Department has been so harassed by many calls more pressing that no attention has been paid to my suggestions. I propose to send at least four companies of cavalry and three companies of infantry to Fort Buford in the early spring. This will make a pretty good force there. Fort Buford, as it is now and has been for three or four years, is practically in a state of siege.

I have no doubt the last raid, made, I think, on the 23d or 24th of July, in the Gallatin Valley, was by a party of these Indians.

P. H. SHERIDAN,

*Lieutenant General, Commanding.*

HEADQUARTERS OF THE ARMY,

*Washington, August 7, 1871.*

Respectfully submitted to the Secretary of War. The Army is in no condition to meet the requirements of a war with the Sioux Indians in the inaccessible region about Milk River. All our measures in that quarter are "defensive," and necessarily very weak.

W. T. SHERMAN,

*General.*

## NEBRASKA SUPERINTENDENCY.

No. 50.

OFFICE OF SUPERINTENDENT OF INDIAN AFFAIRS,  
*Omaha, Nebraska, Ninthmonth 26, 1871.*

**RESPECTED FRIEND:** In submitting this my third annual report, together with agents' reports for the northern superintendency, I have the satisfaction of being able to say, that the Indians under our care are advancing in civilization, and that five of the tribes have, during the year, increased in population.

## THE SANTEE SIOUX.

By the accompanying report of Agent Asa M. Janney, who resigned his office the 21st of Seventhmonth last, it will be observed that the Santee Sioux have this year raised more grain and have a better prospect for garden vegetables than for several years past. The tract of land they inhabit, bordering on the river Missouri below the mouth of the Niobrara, is extremely rough and broken, much of it consisting of high bluffs and steep hills, unfit for tillage. The allotments of land in severalty assigned them are mostly on the river-bottom and in narrow valleys watered by small streams. On these allotments about eighty houses had been built when Agent Janney made his report. Most of these houses were built of logs, and constructed by the Indians themselves, with some assistance from the carpenter and his Indian apprentices. The doors and windows and boards for the floors were furnished by the agent. Cooking-stoves have also been supplied to all the Santees who have built on their allotments, and, for many of them, a few acres of ground have been broken, in order that next year they may cultivate their own fields.

It has been the policy of the agent to encourage the Indians to help themselves as far as practicable, believing that a comfortable cabin of their own building would tend more to render them independent and self-sustaining than a more showy and commodious dwelling built for them without an effort of their own. They have, during the last two years, manifested an increasing disposition to promote their home comforts by the use of bedsteads, cupboards, chairs, and other household furniture. The women have made a large number of bed-quilts, that do credit to their skill and industry.

I refer to Agent Janney's report for other interesting particulars showing the progress of this tribe in civilization, and I concur with him in thinking that an industrial boarding-school would greatly benefit the tribe by encouraging among them the use of the English language, and instructing both sexes in the arts that minister to the subsistence and comfort of civilized communities.

Since the retirement of Agent A. M. Janney, Joseph Webster has occupied the post of agent for the Santee Sioux, and his report, herewith submitted, shows that the Indians are still industriously engaged in settling on their allotments, ten houses having been built during the last month. He reports that the mission schools are in a prosperous condition. A small school for instructing the Indian women and girls in industrial pursuits has been opened by a Friend with encouraging results.

The report of A. L. Riggs, missionary of the American Board and

superintendent of the Santee Normal Training-School, contains some suggestions worthy of attention.

No report has been received from the Episcopal mission.

#### THE WINNEBAGOES.

The accompanying report of Agent Howard White gives a very encouraging account of the Winnebago tribe of Indians, showing a manifest advance in civilization and an increase of population, which attest an improvement in their moral and sanitary condition.

Among the material improvements made during the year are the following, viz: The erection, by Indian labor, of seven frame and five log houses; thoroughly repairing three school-houses, and furnishing them with new desks; constructing eight miles of wire-fence, principally around lots cultivated by Indians; breaking four acres of prairie on each of eighty allotments; making over 100 Indian farms on which some breaking has been done. There have been purchased and distributed to the Indians about 45 cooking-stoves, 25 wagons and sets of harness, and 50 plows. Owing to extreme drought in the early spring the wheat-crop was injured, but the oats, corn, and potatoes have yielded well.

In my last annual report I stated the reasons which had induced the agent, with my approbation, to displace all the old chiefs and to appoint others who were working-men and advocates of civilization. The measure was sanctioned by a vote of the tribe, and at the end of a year a popular election was held for chiefs, twelve in number, who each receive a small salary. The election was conducted in an orderly manner, and resulted in the selection of men who were mostly suitable for the position. I consider this a salutary and important measure. It has a tendency to weaken the old tribal relation, with all its superstitious ideas and customs, and to prepare the people for self-government. It will pave the way for the Indians to become citizens. Some of the tribe are looking forward to this result, but the large majority are fully conscious that they are not yet prepared for citizenship, and they prefer to remain as wards of the Government until further advanced in civilization. The remarks of Agent White on this subject are worthy of attention.

I also concur with him most heartily in his views relating to an industrial school for this tribe. They have ample means for its erection and support; they are desirous for its establishment, and they ask that a portion of their funds, invested in Government securities, may, by act of Congress, be appropriated to this purpose and to other beneficial objects.

The day-schools have been supported and well attended, as appears by a teacher's report, herewith submitted. Sabbath-schools have also been kept, and meetings for divine worship occasionally held; all Christian denominations being at liberty to hold religious meetings with the Indians.

#### THE OMAHAS.

The certificates sent to the Omahas in the Thirdmonth last, securing to them and their heirs their allotments of land, were received with general satisfaction, and have proved to be an incentive to increased industry in the improvement of their farms. With the aid of the carpenter and his Indian apprentices, a number of comfortable cottages have been built for the Indians; a large amount of lumber has been sawed and much of it hauled by them to their allotments. The agent is desirous to push forward the building of houses and fencing of lots, but a deficiency of funds has cramped his endeavors. An excellent school-house has

been built, chiefly by Indian labor, and a block house, formerly used for a fort, has been converted into a school-house. There are now three schools in operation on the reservation, with the most satisfactory results. I refer to the accompanying report of the agent, Dr. E. Painter, for interesting details of the condition and progress of the Omahas, showing that they are improving in their moral and social condition, that they fully appreciate the importance of education for their children, and that by a system of uniform kindness and justice, coupled with firmness, they are easily governed.

#### THE PAWNEES.

In my report of last year, I mentioned the overtures I had made on behalf of the Pawnees, to negotiate a treaty of peace and amity with the Sioux, their hereditary enemies, whose depredations were a source of continual annoyance and anxiety. My endeavors were encouraged by the Department, and at one time there seemed to be a prospect of success. The overture made to Spotted Tail was favorably received by him and some others of his band, but subsequently he sent a message through Agent J. M. Washburne, of the Whetstone agency, Dakota Territory, stating that his people declined to enter into the proposed treaty, for the reason that their action would be without the consent of the whole Sioux nation, and would be regarded as a declaration of war against those Sioux who might not be parties to the treaty. The Sioux nation consists of so many bands, mostly in a nomadic state, and scattered over a wide region, that I see no prospect of obtaining their general concurrence in such a treaty. During the year five of the Pawnees, three of them women and two young men, have been killed on the reservation by the Sioux. The young men had been educated at the manual-labor school, and were much esteemed for their moral worth. Information which I deem reliable leads to the conclusion that the murderers belonged to Spotted Tail's band, and that horses and mules stolen from the reservation were taken by the same people.

The Pawnees wish to open farms and build houses some miles distant from the villages where they now live, but the incursions of the Sioux are a serious obstacle in their way. A large number of white people have recently settled on lands north and west of the reservation and adjacent to it, whose presence, I trust, will prove to be a protection from the marauding Sioux.

The wagons, plows, mowing-machines, and other agricultural implements furnished the Pawnees within two years past, are highly prized and successfully employed. Many of the men and some of the chiefs have manifested a willingness to labor that is truly encouraging.

The sanitary condition of the tribe is by no means satisfactory, and while the uncivilized portion of them, comprising more than three-fourths of the whole, continue to live in their earthen lodges, grouped together in villages, and subjected to the effluvia of decaying garbage, they cannot be healthy. When they move out on the prairie and have comfortable cabins to live in, with suitable medical attendance, they will doubtless increase in numbers and advance more rapidly in civilization.

The manual-labor boarding-schools continue in successful operation, and are regarded by the tribe with increasing favor. I refer to the report of the principal, E. G. Platt, for full particulars relating to them. A commodious house for a day-school has been built, and the school opened very recently with encouraging prospects. The clothing of the children in attendance was furnished chiefly by the Friends connected with Baltimore yearly meeting.

I respectfully call thy attention to the fact that the Government has not fulfilled its obligations to this tribe, as stipulated in article 3 of the treaty with the Pawnees concluded September 24, 1857. By that article, the Pawnees are required to keep every one of their children between the ages of seven and eighteen years constantly at school, for at least nine months in each year, and parents or guardians failing to do so are liable to have a part of their annuities withheld. This certainly implies a correlative duty on the part of the Government to furnish schools sufficient for all the children, but the manual-labor boarding-schools and the day-school now in operation are not sufficient to accommodate half the children of the tribe, nor has there been, within the last three years, an appropriation made by Congress sufficient for the purpose.

#### OTOES AND MISSOURIAS.

There has been a very decided improvement in this tribe since my first report, in the year 1869. Then they were rapidly declining in numbers, now they are increasing; then they had no school and apparently no desire to improve their condition, now they have a flourishing school, and many of them are opening and cultivating farms. They have cut, for building purposes, about 1,000 saw-logs this year, and, with some assistance from the carpenter, many are constructing for themselves comfortable cabins. The annuity of this tribe is very small, and the agent is cramped in his efforts to make the needed improvements for want of sufficient funds. For further particulars, I refer to the report of Agent A. L. Green.

#### THE IOWAS.

The report of Agent T. Lightfoot, of the Great Nemaha agency, gives an encouraging account of the Iowa Indians under his care. A growing interest in agriculture has induced many of them to enlarge their farms, and their crops of corn, potatoes, and beans have been successfully cultivated. They generally take good care of their live stock, and have secured an abundance of excellent hay for use in winter. They manifest a desire for the comforts of civilized life, and have turned their attention to the improvement and furnishing of their houses.

An industrial home for orphans has been established, which now accommodates fourteen children, and would be capable of receiving a greater number if a larger fund were appropriated for its support. The school kept by Mary B. Lightfoot, with the assistance of Mary Childs, an Indian woman, consists of 32 boys and 36 girls, who are reported as making good progress. A sewing department has been added to it, in which Indian women and girls receive instruction. The tribe numbers 215, being an increase of one since last year.

#### THE SACS AND FOXES OF MISSOURI.

This remnant of a tribe now consists of eighty souls, being the same number reported last year. They are included in the Great Nemaha agency, and Agent T. Lightfoot reports that they have, within the past year, shown some disposition to labor on their lands. They receive a larger annuity *per capita* than any other tribe in this superintendency, and, owing to indolence and intemperance, have fewer of the comforts of life than any other. They are situated six miles from the agency, and have no teacher or other employé of the Government residing among them.

In the treaty with the Sacs and Foxes and Iowas, dated March 6, 1861, promulgated March 26, 1863, article 5, there is a provision that the United States shall expend the sum of \$1,000 for the erection of a school-house and dwelling-house for the school-teacher, for the benefit of the Sacs and Foxes, and also the additional sum of \$200 per annum for school purposes, so long as the President of the United States may deem it advisable. This stipulation has never been complied with by the Government, and I respectfully suggest that Congress be asked, at its next session, to make the requisite appropriation. Inasmuch as the omission, for many years, to comply with this stipulation has resulted greatly to the injury of the Indians, I further suggest that the sum of \$200 per annum, being too small to support a teacher, be increased to \$800 per annum. At one time the Sacs and Foxes expressed a wish to sell their reservation of 16,000 acres, and to purchase of their neighbors, the Iowas, a sufficiency of land for their use. It appears from the report of Agent Lightfoot that the chiefs are not now disposed to make any change, unless they are allowed to go to Washington and negotiate a treaty.

#### WAYS AND MEANS.

In order to settle the Indians on their allotments of land, to break the prairie-sod, to fence their fields, to assist them in building comfortable cabins or cottages, to provide them with implements, live-stock, and seeds, and to establish day-schools and an industrial school on each reservation, will require a large amount of funds. In my two previous reports I have recommended that some portions of certain reservations, which contain more land than the Indians need, should, with their consent, be sold at their fair market value, and the proceeds applied to the proposed improvements. With this view the Omahas, whose reservation contains 205,000 acres, have, by petition, expressed a wish to sell from the most western portion of their reservation 50,000 acres, as near as can be separated from the remaining portion of their lands by a line running along the section-lines from north to south.

The Otoes and Missourias, whose reservation contains 160,000 acres, have expressed a desire to sell about 80,000 acres, being the western half of their reservation, and lying wholly west of the Big Blue River, part in Nebraska and part in Kansas.

The Pawnees, whose reservation contains 288,000 acres, would sell about 50,000-acres, but the location of the part to be disposed of has not yet been determined.

During the last session of Congress, the President of the United States, at the request of a committee of Friends, sent a message to the Senate and House of Representatives submitting the draught of a bill intended to effect the object desired. It did not pass, owing, as was believed, to its being of too wide a scope, and applicable to Indian lands in general. I respectfully recommend that a special act, describing the lands proposed to be offered for sale in this superintendency, be submitted to Congress at its next session, authorizing the President to appoint commissioners to effect the sales.

#### CLOTHING AND SANITARY SUPPLIES.

It will be observed, on reference to the agents' reports, that very liberal contributions have been sent to all the agencies by the Friends connected with the yearly meetings of New York, Philadelphia, Baltimore, Ohio, Indiana, and Genesee. Nearly all the school-children, except

those at the Santee agency, have been clothed in this way, many garments for the aged and infirm have been furnished, and suitable food for the sick has been supplied.

The pupils of the mission schools at the Santee agency have been provided for by contributions from their respective churches. Much good has resulted from these donations.

#### POPULATION.

It is a very encouraging feature in the reports from the several agencies this year that five of the tribes have increased in population, namely, the Santees, the Winnebagoes, the Pawnees, the Otoes, and the Iowas, making an aggregate gain of 143. Of this number, about 30 have been adopted into one of the tribes, and the remainder is the natural increase. The Omahas and the Sacs and Foxes number the same as last year.

The several tribes are reported as follows, viz:

|                           | Males.       | Females.     | Total.       |
|---------------------------|--------------|--------------|--------------|
| Santee Sioux.....         | 424          | 563          | 987          |
| Winnebagoes.....          | 685          | 715          | 1,400        |
| Omahas.....               | 479          | 505          | 984          |
| Pawnees*.....             | 1,024        | 1,310        | 2,334        |
| Otoes and Missourias..... | 230          | 220          | 450          |
| Iowas.....                | 109          | 106          | 215          |
| Sacs and Foxes.....       | 42           | 38           | 80           |
| Total.....                | <u>2,993</u> | <u>3,487</u> | <u>6,480</u> |

#### INDIAN CIVILIZATION.

Being about to retire from the position of superintendent of Indian affairs, I deem it not inappropriate to express the result of my observations and reflections on the subject of Indian civilization. It is well known that in nearly all cases of advancement from savage to civilized life the progress has been slow; that the transition has usually occupied several generations. It may, however, be accelerated by bringing the subjects to be acted upon into familiar intercourse with good and enlightened people, who, by a course of uniform justice and kindness, may gain their confidence, and, by examples of moral purity, inspire them with respect and love.

In the endeavors that have been made to civilize and christianize the Indians, too little attention has usually been given to the influence of woman and her peculiar adaptation to this work. In my judgment, the most efficient means we can use is to employ in the Indian service families composed of intelligent and virtuous men and women, accompanied by their children. Those should be selected who feel a real interest in the work, and who would engage in visiting the Indians in their dwellings, attending them in sickness, teaching their children, instructing the men in agricultural pursuits and the women in household duties, thus leading them, by example and precept, to appreciate the beauty and excellency of Christian principles. We have found by experience that very many of the Indian men may be induced, by liberal wages promptly paid, to perform the agricultural labors that were formerly imposed on their women, and that the Indian women very readily learn to attend to household duties; but our chief reliance is in the education of the young.

\* In the statistics printed with the Commissioner's Report for 1870, page 334, there is an error in the population of the Pawnees; it should be 2,325.

The children show an aptitude for learning and are very amiable, scarcely ever quarreling among themselves. There should be on every reservation a sufficient number of day-schools to accommodate all the children between the ages of six and twelve years. They should be carefully taught to speak, read, and write the English language, and should then be transferred to an industrial boarding-school, of which there should be one or more on each reservation. In these schools the boys should be taught farming, gardening, and the mechanic arts, and the girls instructed in housekeeping and sewing. By this means a tribe may be civilized and taught to speak the English language in a single generation. While this system of education is going forward, allotments of land should be assigned to every family, implements of agriculture, seeds, and live stock furnished them, and assistance given them in building cottages. Religious instruction should be given adapted to their condition, and the practical part of Christianity illustrated by example. By these means I believe the enlightened and humane policy of the President may be successfully established, and the aborigines of our country saved from extinction.

Very respectfully, thy friend,

SAM'L M. JANNEY,  
*Superintendent Indian Affairs.*

Hon. H. R. CLUM,  
*Acting Commissioner Indian Affairs, Washington, D. C.*

---

No. 51.

SANTEE AGENCY, NEBRASKA,  
*Seventhmonth 18, 1871.*

DEAR BROTHER: Having resigned my office as agent for the Santee Sioux, in consequence of my health not being such as to enable me to perform the duties thereof, I forward my annual report earlier than usual.

When I took charge of this agency in 1869, I found the Indians had adopted the citizens' dress and had made much progress in civilization; most of them had given up their lodges and were living in log-houses, rudely constructed, without floors. One of my first efforts was to have a saw-mill erected. I also, about the same time, made arrangements for building a flouring-mill. The building of the mill was attended with many difficulties, its progress being retarded by the death of the mill-wright and other untoward circumstances; but the difficulties having been overcome, the building completed, and the machinery working to my entire satisfaction, I feel repaid for the labor and anxiety of the undertaking. The Santees are now enjoying good flour, manufactured at their own mill, which they appreciate.

My next object was to have their land allotted to them in severalty. The saw-mill has been of great service to them, stimulating them to industry, and enabling them to build much better houses than they could have done without it. There are now about eighty houses built on their claims, with good windows and doors, which I furnished them ready made, and many of them have been furnished with plank for their floors. Cooking-stoves have been given to those who have built on claims allotted to them. I think the prospect of a stove has stimulated some of them to build sooner than they would otherwise have done. Notwithstanding the failure of last year's crop, in consequence of the

drought, which we feared would be so discouraging to the Indians, when the time came for beginning operations on the farm this year they were anxiously inquiring how they were to obtain seed. When told that provision had been made for seed they were entirely satisfied, and went to work in earnest to prepare the ground to receive it. So far their labors have been crowned with success; we could not have desired more seasonable weather than we have been favored with. The Santees have planted large patches of corn, and potatoes; and other vegetables have been, generally, well tended, and are looking very well.

It has been a source of much gratification to me and my family to observe the increased interest which the women manifest in their housekeeping. When we first went among them it was very unusual to find a table in a house; now the houses without tables are the exceptions, and these tables are often covered with oil-cloth. It was then no uncommon thing to see the dishes piled up on the floor in one corner of the room, but one of the first wants supplied by the saw-mill was cupboards. Instead of having to take seats on a blanket spread on the floor, or on their beds, as was the custom two years ago, a bench or seat of some kind is now offered when we go to their houses. Bedsteads made of cotton-wood boards now take the place of those small poles which, on our arrival at the agency, supported their robes and blankets. In a great many houses coverlids and neatly made bed-quilts now take the place of soiled blankets, more than one hundred and fifty bed-quilts having been completed during the last eighteen months. The women are becoming much interested in poultry. One remarked, when leaving the village for her own farm, that she would now be able to raise chickens with some satisfaction, and have no one to interfere with her. A few are turning their attention to butter-making, and succeed very well. Nearly one-half of the families on this reservation are supplied with cows; those having them seem to appreciate them and take care of them. I hope it will not be long before all will have cows furnished them.

The want of an industrial school continues to be felt as much as when I first took charge of this tribe. The day-schools cannot supply its place. In the last two years the Santees have made but little progress in the English language, and, under the present system of instruction, I see no chance for them to become sufficiently familiar with the language to enable them to conduct business for themselves satisfactorily, or to become as useful citizens as they are capable of becoming. Great pains have been taken to teach them their own language, which enables them to send missionaries to other tribes of Sioux. While this may be entirely right for mission schools, I think it would be to the interest of Government, and I know it would be for these Indians, to establish a school here, the main object of which shall be to prepare them to take their places in enlightened and refined society. As long as they are confined to their own language they will be Indians, but when made familiar with the English, I have no doubt many of them will become valuable citizens.

Judging from the advancement these Indians have made in the last two years, I am of the opinion that, if they are furnished with cows, oxen, and plows, and it is found that their land will produce good crops of wheat and corn, the day is not far distant when they will no longer be dependent on Government for supplies.

Thy brother,

ASA M. JANNEY,  
*United States Indian Agent.*

SAMUEL M. JANNEY,  
*Superintendent of Indian Affairs.*

## No. 52.

SANTÉE AGENCY, *Ninthmonth* 11, 1871.

RESPECTED FRIEND: The time having arrived to send in my annual report, I respectfully submit the following:

I took charge of the agency on the 22d of Seventhmonth, 1871. I found things generally in a prosperous condition. The brief time that I have been here previous to making this report must necessarily preclude me from saying much about my own share of the duties of the past year, for the principal part of which I refer thee to the report of the former agent, A. M. Janney. The season has been a very favorable one, there having been plenty of rain for the maturing of their crops, which has very much encouraged the Indians in making extra exertions in preparing more ground for planting another season. For the statistical account of their crops, I refer thee to the farmer's report.

The Indians are moving out on their claims as fast as their houses can be built. The past month there have been built one frame and nine log houses, a large proportion of the work being done by the Indians.

The mission schools are in a prosperous condition. I send the report of A. L. Riggs, missionary of the American Board of Foreign Missions. S. D. Hinman, of the Episcopal mission, not being at home, accounts for the absence of his report. The statistics are filled up by his teachers. Although these mission schools are doing a good service in educating the youth, yet in my opinion there is a branch of education they cannot reach, and which only can be filled by an industrial school, where a practical education can be given, including all the domestic industries belonging to civilized life. We have had for the last two months a small school of the kind conducted by private enterprise, the funds being furnished by the Society of Friends, which has proved an entire success. It is to me a matter of surprise to see how readily the girls learn to sew, and some of them to cut out garments.

Respectfully, thy friend,

JOSEPH WEBSTER,  
*United States Indian Agent.*

## No. 53.

MISSION OF AMERICAN BOARD,  
*Santee Agency, September 1, 1871.*

DEAR SIR: During the year now past we have finished our permanent mission buildings, which were in process of erection a year ago. These are a school-house, which we also use for a chapel, and a dwelling-house. Our school-house is 26 by 50 in its main part, and is now well provided with recitation-rooms, wardrobes, blackboards, maps, books, &c. It has desk accommodation for 86, and can seat 100 in school. By the use of chairs, we can accommodate 200 at meeting.

Being so occupied with building, we did not have any fall term of school. During the winter term of thirteen weeks there were enrolled 111, with an average attendance of 69. In the spring term of eight weeks, 67 attended, with an average of 34. The whole number attending during the year was 115; of these 31 were boys, 29 girls, 37 young men, and 18 young women. The young men and women attended chiefly in the winter. Thirteen of these young men came from other parts; most of them were from the Sioux River colony. Two were Brulé

Titons and one a Blackfoot. As those from the Sioux River colony had none of the benefits of the United States annuities, they were obliged to provide their own outfit by hunting and trapping during the autumn.

It became necessary to furnish these young men from a distance with some sort of home, and I opened a boarding-hall for them, remodeling some of our old mission buildings for the purpose. Your predecessor allowed them to draw rations, which I supplemented by such supplies as their health or necessities required. I would here ask the continuance of the same favor to those attending the coming winter.

Year by year, as our work progresses, we are enabled to make the grade of our studies higher. This last year I have begun to introduce the studies of geometry and grammar. The great difficulty in taking up new branches is the lack of text-books, and, what is worse, the lack of terms with the proper and definite scientific meanings. These have to be worked out. As the great end of our work is to train up teachers from the people and for the people, we try to train our scholars in the principles of things and in the power of thought. We, therefore, use the native language as our medium of instruction, and, in our teaching of English, allow them to go no faster than they understand. Our past success is seen in the number of men now at work as teachers and preachers; not only those in connection with our mission, but almost all those in the employ of the Episcopal mission as well.

Having a small printing-press at this station, last winter Mr. Pond, with the assistance of Mr. Eli Abraham, an Indian, printed an English-Dakota vocabulary of 150 pages, and containing some 14,300 words. It is for use in our schools. Mr. Abraham afterward did the whole work on a primer in the Yankton dialect.

In regard to the church and congregation connected with this mission, I have one thing worthy of mention. Though small in itself, circumstances give it importance. Any one who stops to consider a moment will perceive that the great danger before a people like this, fed and clothed by the Government, and the recipient of unnumbered private charities, is beggary. By continued dependence they lose independence, and even the desire for self-help. The result of help is helplessness, unless there are strong counteracting influences. Feeling thus, we proposed the taking up of a weekly collection in the church for the relief of the poor and sick, to be dispensed by men chosen by themselves. There was much opposition to it on the ground of the poverty of all—all needing too much to give. But, believing it to be in accord with scripture and with the principles of a true political economy, the plan was pressed to adoption, and the results are most gratifying. The sum of \$44 47 has been collected by them in penny contributions since last January. The congregation are now heartily in favor of it. They feel that they can help themselves. And I believe also that they will appreciate better the charities from abroad.

In regard to the general social condition of this people, I cannot forbear calling your attention to the evident increase of licentiousness among them. Not that they are given to this vice as much as many other tribes, but there is a falling back from the point they had attained. This may be accounted for in several ways. It is doubtless the natural tendency of material prosperity to promote physical indulgence. Though you find them poorly enough off, they are rich in comparison to what they were when they first came on to the Missouri. They were then, and for some time afterward, also under the control of a powerful religious sentiment, which pervaded the whole community. The circumstances of the time, incident to their long imprisonment and many pri-

vations, favored this. But when these circumstances changed, all those who had not the root of the matter in them naturally fell back to their old thoughts and ways. Allow me therefore to ask your special consideration of the proper relation of the civil authority to the repression of this vice. While it is true that virtue must be a principle implanted in the heart, and therefore we should use every moral means in our power to foster it, using religious and physical instruction, consistent example, and loving Christian rebuke if need be, still it is true also that government is ordained of God for a terror to the transgressor and a protector of the virtuous and innocent. And those who sin often pass the point where neither entreaty nor rebuke can reach them. Both their own salvation and the safety of those they may yet lead astray call for the exercise of some wholesome force to arrest them in their course. Be assured we are doing all that we can to stem this tide of evil, but, for the lack of civil law, with its penalties and protection, our religious efforts are sadly crippled.

Yours, respectfully,

ALFRED A. RIGGS,  
*Missionary of the American Board and Superintendent  
of Santee Normal Training-School.*

JOSEPH WEBSTER,  
*United States Indian Agent.*

---

No. 54.

OMAHA AGENCY, NEBRASKA,  
*Eighthmonth 21, 1871.*

RESPECTED FRIEND: The following annual report of the affairs of this agency is herewith submitted:

During the past year the hopes heretofore cherished in relation to the capacity and inclination of these Indians to engage in agricultural pursuits, and to adopt the habits of civilized life, have been more than realized. A steady advance in the direction indicated has been observable throughout the year. Especially has the disposition to labor in the field been manifested in striking contrast with their former slothfulness. This fact has been observed and commented upon by most of those who have visited the agency. Their tendency to nomadic habits seems to have been totally abandoned, and few of them are now inclined to leave their reservation, unless when called away by special business; in such cases they request a pass from their agent.

A lively interest is manifested among them upon the subject of education. Three schools, two of which have been established within the past year, have been well attended. These are all day-schools. The progress of the children in study has been highly encouraging and satisfactory. Through the liberality of Friends of Indiana yearly meeting, who exercise a special supervision over the affairs of this agency, nearly all the school-children, and many aged and infirm persons, have been comfortably clothed and furnished with other needed supplies. Reference is invited to the accompanying reports of the school-teachers upon this deeply interesting engagement, the successful prosecution of which is so essential to the future prosperity of these people.

The subject of finances seems to be the principal, if not the only, source of embarrassment or discouragement. The earnest appeal made to Congress at its recent session, by the chiefs on behalf of the tribe,

and unanimously sanctioned by the Indians, to provide for the enactment of a law authorizing the sale of 50,000 acres of the most western portion of their reservation for their benefit, was rejected, for the reason, it is alleged, that the bill submitted to Congress embraced other subjects not sufficiently matured for its favorable action. The Indians are thus left almost wholly destitute of available resources for purposes of general improvement—such as building houses on the farms recently allotted to them in severalty, and providing teams, agricultural implements, seeds, &c., to enable them to engage in farming pursuits with profit and success. On this account the building of houses by the Indian carpenters, engaged in during the past year with so much interest and success, as well as many other improvements on the reservation, are now necessarily suspended for want of funds; and fears are entertained that the Indians may relapse into their former habits of indolence and improvidence, and thus become a burden to the Government and a discredit to the humane policy it has so wisely inaugurated. For this cause I most earnestly desire and request that Congress, at its approaching session, will, at an early day, favorably consider the reasonable and earnest prayer of these people to provide for the sale of so much of their surplus lands as will enable those placed in charge of them to proceed vigorously with the work of civilization and improvement so long urged upon them by the Government.

#### FARMING OPERATIONS.

The growing interest of the Indians in the products of the soil has been exemplified, during the present season, in the marked improvement in the cultivation of their crops compared with former years. Notwithstanding a protracted drought throughout the summer, and still prevailing here, it is conceded that the crops this year are the best and most abundant ever raised upon this reservation. The Indians will have a large surplus of corn for sale, and wheat enough to supply their wants during a large proportion of the coming year; potatoes, beans, squashes, and other garden vegetables are also quite plentiful. Nearly all of the Indians have built substantial granaries for storing their corn, instead of burying it in the ground, as was their former custom, where a large proportion of it was generally damaged and unfit for use. Many of them have been engaged during the summer in plowing and opening farms on their individual allotments of land, and all seem anxious to be settled in their respective homes. Farm labor is now performed almost exclusively by Indian men, the females being thus relieved from the oppressive drudgery hitherto required of them.

#### BUILDINGS AND IMPROVEMENTS.

From five to ten Indian carpenters have been engaged since last report in building and various other improvements on the reservation, until these operations were necessarily suspended for want of funds. Six comfortable and substantial frame cottages for the Indians, each with five rooms and a neat piazza in front, have been built on their several allotments; also a large double house, with ten rooms, for the accommodation of teachers, and a commodious school-house, besides building several bridges, a large ferry-boat, and more than twenty sleds for hauling logs, &c. These are among the results of the labor of these Indian apprentices. The rapid advances made by them in knowledge of the mechanic arts are very encouraging and gratifying.

## STOCK AND FARMING IMPLEMENTS.

There has been a considerable increase in the number of young cattle owned by the Indians since last report. They are ever on the alert for breaking a pair of young oxen whenever they arrive at a suitable age, and are becoming quite skillful in the management of their ox-teams. Occasionally they exchange their ponies for young cattle, which is a step in the right direction. One grain-reaper and one new mower have been added to the stock of farming implements since last year; but the want of a full supply of plows, wagons, harness, and other appliances for conducting farming operations successfully is still felt to be a source of discouragement.

## EDUCATIONAL.

The efforts directed toward the improvement of the mental and moral condition of the Omaha Indian children during the past year have been crowned with eminent success. The desire for acquiring knowledge seems to be the most prominent inducement for the very regular attendance of the children, added to the encouragement they continually receive from their parents. As an evidence of the interest felt by the Indians in the subject of the education of their children, I may notice the fact that many of the parents moved their tents to a position near the school-houses, so as to afford greater facilities for their regular attendance, a concession rarely to be met with among Indians. The institution of Firstday (or Sunday) schools has also been found quite beneficial; and recently sewing-schools for the instruction of girls, and arrangements for teaching Indian women to cut out and make up garments, have been added to their advantages. Still there is a great need felt for the establishment of an industrial school for the benefit of both sexes, though the want of funds is painfully felt to preclude all hope in this direction at present.

## CONCLUDING REMARKS.

A residence of more than two years among these people, and my opportunities for free intercourse with Indians of various other tribes, fully confirm me in the belief that the Indians, as a class, are tractable, and easily governed by a system of uniform kindness and justice, coupled with resolute firmness in the right on the part of those appointed to manage their affairs. The reverse is certainly exceptional. When once the full confidence of an Indian is gained, the victory is won.

The question as to the capacity of these people to become elevated to the plane of civilization and enlightenment, as well as self-supporting, at no distant day, and not only to receive intellectual culture with facility, but to become imbued with the divine influences of Christianity, now remains no longer a problem. To promote these humane and charitable objects needs only the fostering hand of the Government, and the honest and earnest labors of those delegated to watch over their interests; and surely a people to whom this great and flourishing Republic is so largely indebted for the prosperity and happiness of its teeming millions can justly lay claim not only to the kindness and sympathy of the Government, but to the adoption of a liberal and extended policy on their behalf.

Very respectfully, thy friend,

E. PAINTER,

*United States Indian Agent for the Omahas.*

SAMUEL M. JANNEY,

*Superintendent Indian Affairs, Omaha, Nebraska.*

No. 55.

OMAHA AGENCY,  
*Eighthmonth 21, 1871.*

RESPECTED FRIEND: We take pleasure in reporting of the favorable condition of our schools during the past year. Most of the scholars had never attended school, and but few could understand or speak our language. Whole number of pupils enrolled 74; of this number 51 were males and 23 females, with an average daily attendance of 50. The branches taught were orthography, reading, writing, arithmetic, and geography. We think they are apt to learn, and that their ability to acquire knowledge will lose nothing by comparison with white children. Most of them are deeply interested, and great pleasure is manifested by the parents in their progress. They will spend hours with us in the school-room, and by their animated countenances show what interest they take in the readiness with which the children answer questions.

Our first endeavors were to make the school-room attractive, and we labored earnestly to have them feel how greatly it was to their advantage to attend regularly. Before the admission of the scholars we exacted promises from the parents to send them all the time, if possible. Generally they complied with our wishes, but in a few cases they grew careless, and we sent the children away, considering them a disadvantage to the schools. Soon the parents would come and inquire the cause of dismissal, thus giving us an opportunity to explain to them how we felt upon the subject.

They have been well clothed during the time, mainly by the Friends of Indiana yearly meeting, and there is great improvement in their cleanliness and general appearance. The greatest obstacle in the way of educating these people is their great reluctance to practice speaking our language even after they understand it. They are timid and sensitive, afraid of using it incorrectly. One thing particularly noted by us is their uniform kindness to each other; we never taught among any class of people where unpleasant differences so seldom occurred.

We feel deeply interested in the advancement of the children, realizing as we do that the ultimate success of the Indians, as a people, depends largely upon the true elevation and education of the young.

Very respectfully, thy friends,

THEODORE T. GILLINGHAM.  
ELIZABETH H. GILLINGHAM.E. PAINTER,  
*United States Indian Agent.*

No. 56.

OMAHA AGENCY, NEBRASKA,  
*August 24, 1871.*

RESPECTED AND KIND SIR: I herewith submit my annual report respecting the school under my charge. Since the establishment of the day-school at this place considerable interest continues to be manifested by the Indians in the education of their children, though the average attendance has fallen somewhat short of what I would desire, owing, in part, to inclement weather and the distance the children have to come to school.

A vacation of two months has been allowed, commencing July 1. This embraces the time when the Indians are away on the hunt. The progress of the Indian children in their studies has been quite creditable to them as well as encouraging to their teacher. The whole number of pupils enrolled was 70, though quite a number of these were in attendance only a few days—boys 33, girls 37; average attendance, 19. The majority of these children read and speak the English language very readily, and some are well advanced in writing, drawing, and arithmetic, while a few have made good progress in geography and grammar. Nearly all acquire the art of writing with great facility. Altogether the progress in learning during the past year has been encouraging and commendable.

Very respectfully,

JOEL WARNER, *Teacher.*

EDWARD PAINTER,  
*United States Indian Agent.*

---

No. 57.

WINNEBAGO AGENCY, NEBRASKA,  
*Ninthmonth 23, 1872.*

**RESPECTED FRIEND:** In making this, my third annual report of affairs at this agency, it gives me pleasure to be able to say that the Indians are in a much better condition than they were one year ago; they are more orderly and contented, and exhibit more of a disposition to work for themselves. Their crops are comparatively good, and the general health of the tribe has been excellent. As will be seen by the report of Dr. William Savery, accompanying this, there has been no epidemic or contagious disease of a serious nature, and comparatively few deaths from consumption and scrofula, the prevailing diseases of the tribe. The appropriate remarks of the doctor as to the importance of having a hospital or infirmary erected where the sick can be properly cared for, &c., are heartily indorsed by me, and I doubt whether a more humane and charitable appropriation of a few thousands of dollars could be made than for the endowment of such an institution.

Owing to a combination of favorable circumstances there has been an increase in this tribe of sixty persons during the past year, about half of which was natural, and the balance, who came principally from Wisconsin, and were probably attracted here by the favorable reports of their relatives, after avowing their intention to remain, were adopted into the tribe.

Among the improvements made on the reservation since my last annual report might be enumerated the following, namely: The erection of seven frame houses, four of which are not yet completed; five log-houses; thoroughly repairing three school-houses, and furnishing them with the most approved style of desks, &c.; establishing a new saw-mill in the timber, where it will be of great service in getting out fencing material and lumber for houses; constructing eight miles of wire-fence, principally around small pieces of breaking on individual claims; breaking four acres of prairie on each of eighty allotments; making over one hundred claims that now have breaking on. All of the carpenter-work has been performed by Indian labor. I have also pur-

chased and distributed to the Indians about 45 cook-stoves, 25 wagons and sets of harness, 50 plows, &c.

The principal crops grown the present season consisted of wheat, oats, corn, and potatoes; of the former 3,500 bushels were raised on about 400 acres; the small yield was owing to the extreme drought of the early spring. About 800 bushels of oats were harvested from 30 acres. The corn on about 500 acres promises a yield of 15,000 bushels; and of the potatoes planted by Indians, in many small patches, it is difficult to form an estimate, but I believe it safe to say that they will have 1,000 bushels in all.

The number of cows owned by the tribe has slightly diminished during the year, from the fact that many to whom they were issued were unable to appreciate their value, and it was impossible for me to prevent such from slaughtering and selling them, although they had all promised to keep and provide for their stock in case it was issued to them. There are a great many hogs and chickens raised by the Indians, nearly every family having a few of each.

At the end of the first quarter, 1871, the first annual election was held for twelve chiefs, in compliance with an agreement of the tribe at a general council held a few months before, when it was decided to pay the chiefs a fixed salary out of the tribal funds. Without giving the details of the election, I will merely say that it was conducted in an orderly manner and resulted in the selection of men who were mostly suitable for the position.

Some excitement was raised a few weeks since by a few half-breed Winnebagoes from Minnesota, who had recently received their proportion of the funds of the tribe, amounting to something over \$800 each, at least one-third of which I learn was given to politicians, who claimed to have secured the passage by Congress of the law naturalizing and allowing them their dues. When some of the half-breeds here ascertained from them with what ease they came in possession of such large sums of money, they, too, were anxious to draw their share of the tribal funds. Most of the tribe, however, believe that they are not yet prepared to get along without Government assistance; and they do not wish any of their number naturalized until a majority are ready; then they would like all to be made citizens. The reason they assign for this is that, in case a part are paid off, some of them will soon squander their money, and then fall back on the tribe for support, as a few who were naturalized in Minnesota seem already to have done.

Before being made citizens, the chiefs would prefer that the tribe should become self-supporting. To effect this, they desire to draw about \$100,000 from the funds returned to them for the expense of their removal from Minnesota, which, in their petition, they asked should be applied for immediate improvements. This they wish used for building houses, purchasing teams, improving their allotments, and some are anxious for an industrial school, than for which, in my judgment, no better disposition of a portion of their money could be made.

The schools, three in number, have been well supported during most of the year, about 250 scholars having been in attendance. The progress of these in learning has been rapid, as will be seen by the accompanying report of John S. White, in addition to whom four native and one white teacher have been employed. We have been greatly assisted in keeping up an interest in the schools, and in giving to the scholars a comfortable and presentable appearance, by the liberal contributions of clothing, &c., from the members of the New York yearly meeting of

Friends, amounting in all to about 3,000 garments, valued at \$4,000. Besides these, they have donated \$100 in cash for the purchase of food, &c., for the sick.

Very respectfully, thy friend,

HOWARD WHITE,  
*United States Indian Agent.*

SAMUEL M. JANNEY,  
*Superintendent Indian Affairs.*

No. 58.

WINNEBAGO AGENCY, NEBRASKA,  
*Eighthmonth 1, 1871.*

DEAR COUSIN: It gives me great pleasure to be able to make the following report of the Winnebago Indian school that has been under my charge:

Much has been done to elevate our school system during the past year. Our school-houses, three in number, have all been recently cleaned, painted, and furnished with excellent furniture; so that now they present an appearance that will compare favorably with any public school in the country. This has the desired effect in making their hours spent in school the pleasantest part of the day. Regular attendance is hereby secured, and cleanliness, that essential appendage to civilization, is now an unquestionable virtue among them. Only with material in this condition may we expect success. Their swarthy countenances are the only reminder to us now that we are in an Indian school. Their native dress has long since been discarded, and is superseded by an excellent fabric of plain construction, that is bountifully supplied to them by the New York Friends, who have charge of this reservation. Shoes and stockings take the place of moccasins, and, on the whole, a neater dressed and better disposed assembly is hard to be found, either in their games around the school-house or at the desk, where every manifestation for knowledge is exhibited. Their principal studies comprise reading, writing, orthography, geography, and arithmetic, together with object lessons in most everything. The latter system we deem the most effectual. I would suggest that a manual-labor school be instituted on this reservation, as it is greatly needed. It would form an excellent terminus in the educational department here, and would do more toward crowning our efforts with success than any one thing. I recommend it strongly, and hope it will soon be accomplished. In the education of these Winnebago children, to which my whole attention of late has been directed, I can say that I feel encouraged.

Very respectfully, thy cousin,

JOHN S. WHITE,  
*Teacher.*

HOWARD WHITE,  
*United States Indian Agent.*

No. 59.

PAWNEE AGENCY, GENOA, NEBRASKA,  
*Ninthmonth 8, 1871.*

ESTEEMED FRIEND: In compliance with the regulations of the

Indian Department, I take pleasure in submitting this, my third annual report.

During the past year the grist-mill has been altered so as to run by water-power instead of steam as before, and in other respects it is very much improved, so I consider it as good as new. The funds used for making these improvements, and also for digging race and building dam, were furnished by the Indians; most of the labor in digging race and building the dam, and also a large proportion in altering the mill, was done by the Indians. The work has so far progressed that we contemplate starting the mill at an early day.

Our new school-house has been erected, 20 by 50 feet, with three rooms in the rear for a small Indian family to have charge of the house, and provide food for the scholars at noon if deemed necessary, leaving a school room 19 by 30 feet, which will accommodate about 60 scholars comfortably; a teacher is engaged and will open school in a few days. Clothing sufficient to clothe the children attending this school has been supplied, principally by Friends of Baltimore yearly meeting, and by some who are not members of our religious society. Other clothing, medicine, and money, and other things, amounting in the aggregate to over \$2,000, have been furnished during the past year by the above-named parties.

Two double-framed dwelling-houses have been erected for the accommodation of the Indians who have been educated at the school; and two families are now occupying one of them, and the other will be occupied by two other families in the course of this month.

A farm-house is in course of construction, 32 by 40 feet, two stories and an attic, with a back building for a kitchen, one and one-half story, which will afford additional facilities for educating our boys and qualifying them for farmers.

Improvements have been continued both inside and around Pawnee manual-labor school building as the funds could be spared for that purpose, and the scholars have aided materially in the work.

On the 7th of the Fourthmonth last, during a very high wind, two of the dwelling-houses at this agency, occupied by Barclay Jones, miller, and J. D. Brewer, millwright, were destroyed by a prairie fire; although we thought ample provision had been made to guard against it.

For an account of the Pawnee manual-labor school I refer to the report of the principal, E. G. Platt, and will state that most of the vacancies referred to in her report occurred a short time before the close of the last term, and as the Indians have been out on the summer hunt I have had no opportunity to supply their places as yet, but intend to soon. The deportment of the children and the rapid progress they make in their studies has afforded me great satisfaction; and the industry and devotion to duty and the best interest of the children by the teachers and all other employés at the school, is worthy of my highest commendation.

I regret the necessity of again reporting a deficiency in our crops; owing to drought and other causes, the wheat was very poor, and the oats the farmer did not consider worth gathering, yet the school has been abundantly supplied with potatoes and a variety of other vegetables during the summer, and we have enough on hand to supply them until another crop can be raised, all the product of their own labor under the direction of the teacher of out-door work.

The Indians have returned from their summer hunt, which they report as very successful and not having met with the Sioux or in any way got in difficulty with any one, and say they have a large crop of

corn and vegetables, and acknowledge the blessings of God in these respects.

They appropriated from their last year's annuity \$7,000 for applying water-power to the mill and the purchase of wagons, harness, agricultural implements and machinery, and to aid them in agricultural pursuits, all of which has been expended for those purposes. They put up quite a large amount of hay last season, the first they had done in that way; and many of them cut up their corn-fodder and stored it away for winter use.

Most of them seem to be impressed with the necessity of providing their food by other means than by the hunt, and are aware that they cannot depend upon it much longer for any part of their supplies, and are anxious to be located on small farms with houses to live in.

Six hundred 10-acre lots have already been surveyed by their request, but owing to the continued raids by the Sioux they do not consider it safe for them to be scattered on farms; five of their number, three women and two boys from eighteen to nineteen years old, have been killed by the Sioux near the Pawnee Village, as they were going to the timber for wood; the boys were two of our elder and most promising young men educated at the Pawnee Manual-Labor School, but we have the satisfaction of believing they were prepared for the sad change.

Two of the mules they had with them were shot, and one stolen and carried off by the Sioux of the Whetstone agency, as I am informed by their agent, J. M. Washburn, and some of the guilty parties are known to him. I earnestly desire the co-operation of the proper authorities to secure indemnity of them for losses sustained by the Pawnees, and some security for their lives in the future.

The practice of sending out war parties for plunder and scalps has been abandoned by the Pawnees, and I require them to return all property found in their possession belonging to other parties.

I deem it my duty again to call thy attention to the third article of the treaty of the 24th of September, 1857, in relation to the schools, which provides that all Pawnee children between the ages of seven and eighteen years shall be provided with facilities for attending school at least three months in each year. This part of the treaty has never been fulfilled on the part of the Government, and I earnestly desire and recommend that the funds necessary be furnished the agent in charge here to enable him to fulfill treaty stipulations with them. The fact that it is due them is a reason sufficient that it should be provided; but there are other reasons, some of which I will briefly state, viz: It will provide them just the aid they most need, to promote their education, civilization, and Christianization; they have never been hostile to the Government, but have always, when they have been called upon, responded by furnishing all the volunteers for the Army the Government has desired them to with great promptness. With the earnest hope that my superior officers will bring this matter to the notice of the next Congress, I leave it in their hands.

No report has been received from the farmer except the statistics of farming I have sent thee.

Very respectfully, thy friend,

JACOB M. TROTH,  
*United States Indian Agent.*

To SAMUEL M. JANNEY,  
*Superintendent of Indian Affairs, Omaha.*

## No. 60.

## PAWNEE RESERVATION,

*September 6, 1871.*

SIR: In compliance with your request, I would respectfully submit the following report:

While as a school we have had varied experiences during the past year, yet, through the blessing of our common Father, we are to-day in a prosperous condition. There is connected with the school a corps of instructors, consisting of one gentleman and eight ladies. The gentleman, Mr. Tracy Matlock, has charge of the larger boys when out of the school-room, and directs their labor. He also acts as steward for the institution. Misses Sallie E. Loyd and Ella Walton have charge of the school-rooms, Miss Geraldine Dickson acts as matron, Miss Mary L. Barnes as housekeeper, Misses Ann Gover and E. C. Redfield have charge of its sewing-room, and Miss Nattie Washburn of girls' sitting-room, also acting as nurse, while your reporter, as principal, oversees the establishment generally.

Of the 80 scholars connected with us at the time of our last report, one was a day-scholar, and attendance has been discontinued; five have been married and are now living in their own homes, two were killed by the Sioux, two died of chronic diseases, and one of an epidemic. Of the 69 remaining, one is apprenticed as blacksmith, one as tinsmith, and four are farm-laborers, leaving 63 in daily attendance on school exercises.

We are trusting it will be your pleasure to call for a fresh recruit from the village, that we may have under our charge all that our house will accommodate.

The progress of the children in their studies the past year, as in years before, has been encouraging to us, though it is a work which requires an unlimited amount of patience and perseverance. Every child, as formerly, is required to perform a certain amount of labor each day. The boys, under the skillful direction of Mr. Matlock, have cultivated several acres of land, thus supplying us with an abundance of vegetables for the table, a luxury we have never before, as a school, enjoyed, though our lands are so fertile. The girls are becoming skillful cooks, laundresses, housekeepers, and seamstresses under the kindly and watchful direction of those who instruct them; and as we visit those who have gone out from us, and witness their effective efforts at housewifery when undirected, we go forward rejoicingly in our work.

Various improvements in and around our building have been designed during the year, and are completed or are in a process of completion; but as our motto is "onward," these are only incentives to further progress. Our partially constructed fence around the house begets a strong desire to see it completed, and the yard prepared for walks, turf, shade-trees, and flowers.

Our newly-mounted eave-troughs suggest the necessity of two capacious cisterns, that we may have an abundant supply of soft water for the cleansing of the outer man. The erection of hay-ricks near us speaks of cows and draught animals unhoused, and without even an inclosure to prevent their straying in a pasture fenced by the stooping sky; and also renews the oft-expressed wish to hear again the familiar voice of the barn-yard fowl, the joy of which has always been forbidden us here because they cannot be safe without proper buildings for their accommodation.

Believing, could these improvements be added to those it has already

been your pleasure to perfect for us, it would tend to the higher culture of those we have in charge, they are suggested for your consideration.

Trusting this report may be approved by you, I am, sir, respectfully yours,

ELVIRA G. PLATT,  
*Principal Pawnee Manual-Labor School.*

Major J. M. TROTH,  
*United States Army, Agent.*

---

No. 61.

OTOE AGENCY, NEBRASKA,  
*Ninthmonth 18, 1871.*

**RESPECTED FRIEND:** Herewith is submitted my annual report of affairs within this agency for the year just closed.

The sanitary condition of the Otoes and Missourias has undergone a decided improvement since last report, but it is still far from what is desirable. A female physician, whom the Society of Friends have employed, devotes her attention to their ailments; and a sanitary fund, furnished by the same society, supplies the sick with needful food and medicines.

An increased interest in farming is evidenced in the care which they have bestowed on their crops, as well as in their extent and variety. Corn, wheat, potatoes, beans, pumpkins, and melons have been grown; and all, with the exception of wheat, have rewarded their efforts. The latter crop, of which they had sown nearly one hundred and forty acres, was ruined by an insect, and its almost total loss has proved as discouraging as it is disappointing.

From an area of about 400 acres, they will probably gather not far from 12,000 bushels of corn, and I would estimate the yield of their potato crop at 1,000 bushels. New land has been broken, but not to a great extent, owing to a scarcity of teams.

Our school is in a condition which bespeaks efficiency in its teachers, as well as satisfactory material in its pupils. It is conducted by a principal and assistant, the former being employed by the Government, and paid from the tribe's annuity, while the latter is supported by Mary D. Brown, a member of the Society of Friends. For particulars concerning the management and progress of the school I refer to the accompanying report of its principal.

In civilizing the Indians within this agency the abolition of their village system will be a most important step. Already more than a score of village families have settled on claims of land, and many others contemplate doing so. Ten frame houses have been erected, nearly a thousand saw-logs have been cut, and a spirit of progress has been awakened which must point the way to civilization.

The want of ox-teams has proved a serious hinderance, and has prevented a majority of our leading Indians from drawing their logs to the saw-mill.

The services of a carpenter, whom the Society of Friends have employed, are of great benefit to the tribe. The dwellings that have been completed are occupied and their comforts appreciated. Chairs, bedsteads, and tables have been distributed among them through the liberality of a member of the Society of Friends; and many families have commenced raising swine and poultry.

During the past year the agency saw-mill has been run without special employes, and chiefly by Indian labor, at little expense.

In a previous report I have recommended the sale of a portion of this reservation, and the lapse of time has only increased the urgency of such a measure. From the sale of 80,000 acres, at their marketable value, the means wherewith to civilize may be derived, and I again recommend such a sale.

The Otoes continue opposed to the survey and allotment in severalty of their land; and the cause for their opposition is to be found in the frauds which followed an allotment on the half-breed reservation, through which many of them were victimized; but a progression of ideas is already leading them toward acquiescence in such a measure.

Although unprincipled white men have rendered it no difficult task for these Indians to procure liquor, their general conduct during the year has been orderly, and very few cases of intoxication have occurred. The scarcity of game has weakened their dependence on the chase. A buffalo-hunt, which was had during the summer by a portion of the tribe, procured a supply of meat and skins. But the rapid settlement of the country, and the consequent disappearance of large game, is enabling them to realize the necessity of reliance on agriculture. Indian aid associations within the Society of Friends have labored faithfully and effectually in providing clothing and other comforts for the Indians of this tribe. Men, women, and children have received garments; the school has been furnished with books, charts, and pictures; garden seeds have been abundantly distributed; food has been supplied for the sick; and, in short, the tribe is indebted to their Christian benevolence for much that materially influences their happiness as well as their gradual elevation.

The evil influences which Indian traders have exerted in supplying these people with superfluities at exorbitant prices are counteracted by the establishment of a trading-house on a new basis. Indian goods, such as beads, paints, and stroudings are nearly all excluded, while necessary and useful commodities are obtained by the Indians on credit at cash prices. The profits of the concern, after deducting all necessary expenses and six per cent. on the capital invested, are designed for beneficiary purposes among the Indians.

Very respectfully, thy friend,

ALBERT L. GREEN,  
*United States Indian Agent.*

S. M. JANNEY,  
*Superintendent Indian Affairs, Omaha, Nebraska.*

---

No. 62.

GREAT NEMAHA AGENCY,  
*Nohart, Nebraska, Eighthmonth 21, 1871.*

RESPECTED FRIEND: In compliance with the regulations of the Indian Department, I herewith submit my third annual report relative to affairs within this agency.

During the year that has elapsed since the date of my last report the condition of the Indians under my care has been gradually improving, their sanitary condition and general health has been more satisfactory than heretofore, and they have been exempt from epidemics and contagious diseases.

Intemperance, which was once a ruling vice, has been less prevalent, and their general conduct has consequently been more satisfactory than during previous years.

#### THE IOWAS

are evincing an interest in agriculture and building houses, which is truly gratifying. Individuals who have spent their lives in wretched lodges are now anxious to have houses erected, and contribute thereto by drawing logs and other material. Four new houses have been built and many dilapidated ones thoroughly repaired. Heretofore it has been customary with these people to live in tents during the winter season, but having furnished many of them with stoves they will have no excuse for doing so hereafter.

A growing interest in agriculture is attested by a general enlargement of their farms. Crops of corn, potatoes, and beans, have been successfully and profitably raised. Wheat, which some of them attempted to raise for the first time, was a failure, being ruined by the chinch-bug.

The stock belonging to this tribe is generally well cared for, and in good condition; an abundance of excellent hay has been cured and shelter provided for winter. The number of ponies and horses owned by them is about 75, they have also 60 head of horned cattle, half of which are work-oxen.

Milk cows have been furnished to many through the liberality of a member of the Society of Friends, he advancing money for their purchase, and waiting two years for reimbursement from the Indians of their first cost. Swine and poultry have been raised by a majority of families, and many have shown an interest in growing garden vegetables.

By reference to the accompanying teacher's report, it will be seen that the educational facilities of the tribe have been greatly advanced by the establishment of an industrial or orphan home. The number of children thus provided for is limited to 14, by a scarcity of funds applicable for the support of the institution; of these the majority are orphans, and all are bright, promising children.

#### SACS AND FOXES OF MISSOURI.

This tribe is located on a reservation of 16,000 acres, and their principal settlement is six miles distant from the agency buildings; owing to their having no government employés among them, their progress toward civilization has been less rapid than that of the Iowas, but it affords me pleasure to notice that they are showing a disposition to improve.

Within the past year they have broken nearly 200 acres of prairie sod. Crops of corn, beans, and potatoes have been grown. They have no schools for their children, are living in miserable tents and bark-houses, with very few of the comforts or conveniences of life, and are feeling unsettled; they have two plans in view, one of which is to sell part of their land and to use the money to open a school, build houses, and improve the remaining part; the other is to sell the whole reservation and join their brethren, the Sacs and Foxes of Mississippi, in the Indian Territory. The latter, I think, would probably be the best, as they are connected both by blood and marriage, and speak the same language. But, one thing is certain, they will never agree to make arrangements or sign papers, in either case, elsewhere than at Washington. And I would earnestly recommend that, this winter, the sale of a part or the

whole of their land, as they may hereafter determine, and that they be allowed to come to Washington to do their business, as they will not be satisfied or feel that it is done right any other way. And in case their land is sold, in order to secure the highest market value, I would recommend that it be sold here, in whole, half, or quarter sections, for cash, to the highest bidder.

From what has preceded it will be seen that the Iowas, and Sacs and Foxes of Missouri, have progressed as satisfactorily during the past year as circumstances could admit. The former having had opportunities and advantages which the latter had not, their improvement has consequently been more obvious and rapid.

By the liberality of the Society of Friends, the Indians within this agency have been supplied with comfortable clothing, and the wants of the sick and aged have been met with proper food and care, and from the same source the Indians last spring were supplied with seeds, fruit-trees, vines, &c., &c.

The trading-house established at this agency has been conducted during the past year in a manner resulting greatly to the advantage of the Indians. All goods of the character denominated "Indian goods" have been excluded, and, while only necessary and useful articles are placed within reach of the Indians, the prices correspond with the neighboring stores.

Experience has proved that an Indian trader can wield an influence for either good or evil to the Indians around him, and hence, in issuing licenses, care has been taken that a conscientious moral man should be the recipient of it.

Very respectfully, submitting the foregoing, I remain thy friend,

THOMAS LIGHTFOOT,

*United States Indian Agent.*

S. M. JANNEY,

*Superintendent of Indian Affairs.*

---

No. 63.

GREAT NEMAHA AGENCY, NEBRASKA,  
*Nohart, Ninthmonth 18, 1871.*

ESTEEMED FRIEND: According to instructions I submit the following report of the Iowa Indian school under my care.

The number of pupils on list is 68—32 boys and 36 girls; the highest number present at any one time, 52. Our greatest trouble from the first has been the want of punctuality in observing the hour for opening school. Many of them living two or three miles distant, and keeping no note of time, the children come straggling in from 9 to 12 o'clock, making it impossible to class them to advantage, having to give lessons as they come in order to get round. But since the establishment of the "Industrial Home" there has been a decided improvement, and considerable emulation exists between the children of the "Home" and others as to who shall be at school first; also in the matter of dress and cleanliness, &c.; and we see that the influence of the "Home" will be for good on the school in general, as well as a great advantage to the children there cared for.

The progress made the past year has been satisfactory and encouraging. What they have learned they learned understandingly. Our

plan has been to not let them pass from a spelling, reading, or writing lesson until they understood the meaning of all words that could be interpreted or illustrated, the pictures discussed and explained. They are now rapidly acquiring the English language, understand nearly all we say, and many of them talk some, and could talk well if they would, but the peculiar trait of Indian character, of being averse to speaking English to strangers, obtains largely among the children as with the older portion, and retards their progress.

In spelling, writing, map and slate-work these children show much aptness and do well. In reading few of them do as well as they really might. Diffidence and want of confidence in their ability to pronounce the words properly induce a slow, hesitating manner, even when they know the lesson well. This is especially the case in the presence of strangers, and is as mortifying to them as it is embarrassing to the teacher.

These children are tractable, pleasant, and affectionate after we once get hold of them; and the possibility of their civilization, education, and culture I consider only a question of time and proper opportunity. I have several in my school who manifest a real fondness for books and study, and give evidence of generous, noble natures. For these especially I hope much, and trust ways will open by which they may be developed and their future cared for.

Our school closes at 3 o'clock, after which the girls sew for an hour or two. The patch-work is an unfailing object of interest; and it is a real pleasure to see their brown faces brighten as they sit chatting over their work. When new garments are to be made the women come and help, and show much quickness and skill in learning to put them together.

These children have been neatly and comfortably clad the entire year by the Friends of Philadelphia. Not a vestige of Indian costume—as blankets, leggings, strouds, paint, &c.—comes into our school-room. From the above-named source they are also supplied at noon with a lunch of crackers or fruit, as well as proper food and delicacies when sick.

Respectfully,

MARY B. LIGHTFOOT.

THOMAS LIGHTFOOT,  
*United States Indian Agent.*

---

### CENTRAL SUPERINTENDENCY.

No. 64.

OFFICE OF SUPERINTENDENT OF INDIAN AFFAIRS,  
*Lawrence, Kansas, Tenthmonth 5, 1871.*

Hon. H. R. CLUM,  
*Acting Commissioner Indian Affairs:*

The period having arrived for the presentation of my third annual report, I feel grateful that our efforts for the preservation of peace among all tribes of this superintendency during the year past have been blessed with a very large degree of success. I deeply regret that an exception to this has occurred in the case of the Kiowas, who have repeated their raids into Texas; but since the arrest and confinement of

their leading chiefs, I have heard of no further depredations upon the people of that State.

The humane policy introduced by President Grant in the administration of Indian affairs is working well throughout this superintendency, although its beneficial results, in some instances, have been seriously crippled by want of promptness on the part of the Government in the fulfillment of some of its important duties, a notice of which will be taken in proper place. The confidence and friendship of the Indians have, very generally, been secured, although, in some instances, it has been very difficult to reconcile them to the slow process pursued by the Government in the execution of its obligations to them. I would respectfully refer to the accompanying reports of the several agents for an exhibition in detail of the condition of the several tribes in this superintendency.

#### THE KICKAPOOS.

These Indians have continued to make commendable progress in the cultivation and improvement of their farms, and in education. Hereafter, nearly all their children, of a proper age, will be provided for at their new mission and industrial school. The report of Agent Miles, and of the teachers of his agency, are indicative of good management. The Kickapoos are well satisfied with their present home, but they look favorably toward joining their brethren, now in Mexico, in selecting a new reservation in the Indian Territory, provided the removal of the latter can be satisfactorily effected. The chief obstacle to such removal, as stated in the special report of Agent Miles, is the strong opposition thereto of the citizens of Mexico, who hire these Indians to steal the property of the people of Texas. There is abundant evidence that in much of the raiding into that State the Mexicans are the principal actors, leading and instigating the Indians of the Kickapoo, Kiowa, and Comanche tribes, as willing tools and accomplices in this wickedness. In the suppression of this evil it is important that our Government direct its efforts not merely to the Indians, but that it should demand of the Mexican government such a control of its own citizens as effectually to secure the peace and safety of our own people upon its borders.

#### THE POTTAWATOMIES.

This once powerful tribe has experienced great changes within the last three years. A large number have become citizens of the United States, and received their respective proportions of the tribal funds, as well as their allotments of land. A few of these have borne the change well, and are in a prosperous condition; but unfortunately a much larger proportion have retrograded into intemperance and poverty. The policy of allowing Indians to become citizens in the midst of white people is ruinous to the former, and should no longer be pursued. They are not usually able to withstand the corrupting influences which are thrown around them by designing and dishonest men, who cling to them like leeches, until they have possessed themselves of all their property, and then abandon them to the charge of public or private charity. The citizen Pottawatomies, in the spring of 1869, under direction of the Government, selected a new home, west of the Seminoles. In my last report I urged their speedy removal and settlement thereon, before they should squander, in intemperance and its kindred vices, the funds which they had just received. It is important to them that the Department take early action in the matter, and that their status as citizens,

and the treaty restrictions applying to their removal to the Indian Territory, be at once clearly elucidated and defined.

The remaining Pottawatomies, 350 in number, are twelve or fifteen miles from their agency, and have received no educational aid of any description. It is of prime necessity that their agent should reside among them, and that a school be opened for their children. I have deemed it my duty to instruct Agent Morris to take immediate steps for the erection of such buildings, on a moderate scale, as shall be necessary to inaugurate the above important measure. This is in accordance with the desire of the Indians, who do not in any degree favor propositions for their removal to the Indian Territory. Should their continuance in their present location not exceed three years, the expenditure of a sufficient amount for the above purpose will prove a great blessing to this hitherto much-neglected portion of the tribe.

#### THE KAWS.

While no very material change has occurred in the condition of this tribe, it will be observed by the report of Agent Stubbs that the mission school has been conducted with increasing usefulness, and that the agricultural operations have had a profitable return. These results are more favorable than could reasonably be expected, when we consider the oft-repeated disappointments, produced by delay in the sale of their lands, and their promised removal to a new home in the Territory. This delay, however, affords a prospective increase of the amount which they will ultimately receive when their lands shall be sold. It is much to be desired that when their removal shall be effected, they may not go as paupers, nor be dependent upon the uncertain provision of annual appropriations by Congress.

#### THE WYANDOTTS.

By the action of commissioners, to whom the classification of this tribe was committed, in accordance with the treaty of 1854, their number has been largely reduced, and the present fraction holding tribal authority are incapable of making advancement to a better condition. Having neither funds, credit, nor force, it is left to them to say whether their brethren, who were unconsciously and unwillingly made citizens, shall be reinstated as members of the tribe. These citizen Wyandotts, living upon the reservation, are much superior in educational and industrial attainments to those who thus far refuse their re-admission; and they would, if again connected with the tribe, soon lift it from the condition of poverty, ignorance, and demoralization into which it has been so unfortunately and fraudulently thrown.

The Wyandotts, Eastern Shawnees, and Senecas have hitherto had no educational advantages, and I have directed Agent Jones at once to erect the necessary buildings, on a moderate scale, for a boarding-school for the children of their tribes.

#### THE SHAWNEES.

The most of this tribe have removed to the Cherokee Nation, according to previous agreement. The Black Bob band are scattered in various directions, and are without permanent homes, while their fertile and exceedingly valuable lands near Kansas City are occupied by squatters, who, in violation of law, have settled upon them, and who pay neither

rent to the owners nor tax to the State. These men have for years retained counsel at the seat of Government during sessions of Congress, whose efforts are directed towards securing such congressional action as shall authorize them to purchase said lands at \$2 50 per acre; whereas, were said squatters removed, as they should have been long ago, and thus fair competition be allowed to take place, the value would at once be raised to from \$10 to \$30 per acre; and the Indians, who are the rightful owners, instead of being paupers, for whom the Government has to provide, would be able to join their brethren in the Cherokee Nation; and secure for themselves comfortable homes, after which their agency could be discontinued. The present delay of Congress to take efficient steps for the just settlement of this vexed question is unfair toward the Indian and expensive to the Government.

#### THE MIAMIES.

The agency to which this tribe was attached has been discontinued. The larger portion of them are desirous of joining the Confederated Peorias, and a few of them have already done so. There are, however, some half-breeds and others who desire to remain upon their allotments and enjoy the privileges of citizenship. In an official report made by me last year, in obedience to instructions from the Department, I recommended that such as desired to join the Peorias be allowed to receive their respective proportions of tribal funds and proceeds of sales of lands, and to follow their inclination to go southward. I still believe this to be the best course for them, and it is one which is satisfactory to the whole tribe. A portion of their allotted lands, and the whole of their common reservation, are occupied by settlers. These were ordered by the Department, last winter, to remove, but owing to the severity of the weather the order was temporarily suspended.

I improved the opportunity afforded by this suspension to visit these settlers in council, and to urge upon them the advantage to themselves of arranging with the Miamies for the quiet and peaceable transfer of the lands upon which they are residing. After conferences with them and the Indians on three different occasions, an agreement was entered into by which the settlers are to pay about \$8 per acre. I have reason to hope that this agreement will be executed, and that thus a subject of much perplexity will be finally and satisfactorily adjusted. I suggest that Congress be asked to ratify this agreement when complied with by the settlers.

#### CHIPPEWAS AND MUNSEES.

The surplus lands of these Indians will be sold on the 14th instant. They desire permission to sell their allotted lands also, and to join other tribes in the Indian Territory. Believing that such removal will be decidedly to their interest, I recommend that the Department exert its influence in obtaining the sanction of Congress thereto. Their school, under the supervision of the Moravians, continues to be well sustained.

#### CONFEDERATED PEORIAS, ETC.

These people are rapidly developing the agricultural resources of that portion of their reservation upon which they are located. I secured the erection of a school-house for them a year ago, and during that period a school has been taught with successful results.

## QUAPAWS.

These Indians have made slow progress in agriculture and have had no educational privileges, except as a few of their children have been sent to school among other tribes. By request of this tribe and of the Peorias, I have instructed Agent Jones to erect buildings for a boarding-school for the joint benefit of the two tribes.

## OTTAWAS.

The Ottawas have continued their progress in agricultural pursuits, commendably increasing the area of their farms, and adding to their improvements, and receiving in return fruitful products as a reward for their industry. Their inclosed fields compare favorably with those in the States. Their school has been very successful, and most of their children have received the benefit of it. There have been many deaths among them during the year. The injustice which this tribe have suffered by the mismanagement of its school property in Kansas, calls loudly for redress at the hands of the Government. For further information concerning the six tribes constituting the Quapaw special agency I refer to the thoroughly statistical report of Special Agent Mitchell.

## THE SACS AND FOXES.

These Indians have made commendable efforts in opening farms and preparing for self-support, but, unfortunately, the excessively dry and hot summer has rendered their efforts nearly fruitless the present year, and there is a prospect of suffering among them the ensuing winter without some outside assistance.

The Absentee Shawnees, under the care of the agent of the Sacs and Foxes, have suffered the past summer from scarcity of provisions. They are a deserving people and should be aided in their efforts to recover from the losses which they sustained as the price of their loyalty during the rebellion. This class of Indians have nearly all small cultivated fields, are industrious, and raise sufficient for their support; as they suffered the loss of their buildings, fences, and stock during the war, they are yet quite destitute of the common comforts and conveniences enjoyed in civilized communities. They have from time to time been assisted to agricultural and mechanical implements, and the agent in charge of them is directed (with their assistance) to erect two school-houses, that their children for the first time may have the benefits of school instruction. If the Pottawatomies settle upon the reservation selected by them, I earnestly recommend that the Government do not allow the absentee Shawnees who are located upon that portion of territory to be disturbed by them.

## THE WICHITAS.

The affiliated bands, under the care of Agent Richards, have long suffered many privations and inconveniences, some of which we hope soon to remove. A saw-mill has been sent to the agency, and as soon as it can be put into operation, school-houses and other much-needed tenements will be erected. I regard the establishment of a special agency for these Indians as a very gratifying evidence of the disposition of the Government to render to them the justice so long their due. They are peaceably inclined, industrious, and anxious for assistance in

their efforts to attain to a higher civilization, and will exert a salutary influence over their uncivilized western neighbors.

#### CHEYENNES AND ARAPAHOS.

These tribes, under the persevering and Christian efforts of the agent, have been very quiet during the year. Their schools have been as successful as could be expected, and their condition generally, as compared with what it was a few years ago, is very hopeful and satisfactory. Although once the terror of the border settlers, and the fruitful source of trouble to the Government, involving the expenditure of much blood and treasure, yet, for two years past, these tribes have been peaceable, and some of their leading chiefs are endeavoring to learn the arts of husbandry and self-support, and are setting a noble example to their people. I believe that Agent Darlington has devoted himself with unflagging industry to the accomplishment of this very result, and it is a source of extreme gratification to me that such an issue has been permitted to follow his efforts. I thankfully acknowledge the co-operation of the Department in the measures of pacification which have been adopted at this agency, and I earnestly recommend a continuance of the same.

#### THE KIWAS, COMANCHES, APACHES.

The full report of Agent Tatum in reference to the depredations of the Kiwas, and to the arrest of their leading chiefs, brings this subject clearly before the Department. There is good reason to believe that the present acting chiefs of that tribe will exert themselves in favor of peace, but it is not probable that their influence over their young warriors will be sufficient to prevent some outbreaks. The recent prospective addition of a large number of Apaches to the Indians of this agency will increase the difficulties of its management, and require increased expenditure for their support.

#### THE OSAGES.

The Great and Little Osage Indians accepted the provisions of the law of Congress of July 15, 1870, which provided for the sale of their lands in Kansas, the purchase of a new home of the Cherokees west of the ninety-sixth meridian, and for their removal thereto. They accordingly selected and proceeded to occupy a section bounded on the east by the ninety-sixth meridian, the position of which was at that time considered to be accurately located by special survey. About twelve months ago Agent Gibson entered with energy and industry into the preparations necessary for developing the agricultural resources of the eastern border of their new territory, (that portion being better adapted to farming purposes than any other,) and, after proceeding to a considerable extent in his operations of building houses and fences, and breaking the soil, he was arrested in his work by allegations of the Cherokees that the line of ninety-sixth meridian had not been correctly located, and that the Osage improvements were really upon Cherokee soil. The Osages have been rendered exceedingly dissatisfied by the uncertainty which has ever since rested upon this matter. The attention of the Department was at once called to it, and application made for a speedy, distinct, and determinate survey of the boundary in question. A reply from the Commissioner of India

Affairs, of June 5, says: "It is expected that the survey of the line in question will be made this month, and the difficulty and dispute attending the present uncertainty of its location will be set at rest." I regret to say, however, that no such survey has yet been made, and a whole year's delay in starting this people in their new homes is fearfully sapping the confidence which they had in the integrity of our Government, and rendering the work of their agent, as its representative, exceedingly onerous and perplexing. Should the line of ninety-sixth meridian be ultimately fixed westward of the present improvements, the most valuable portion of their new home will be cut off, and they will be quite unwilling to accept the hilly and comparatively sterile country which will be left to them.

#### DELAWARES ON THE NEOSHO.

When the Delaware tribe removed from Kansas and joined the Cherokee Nation, a considerable number of them located in the valley of the Cana River, upon lands which were subsequently ascertained to be west of the ninety-sixth meridian. These lands have since been sold to the Osages, and thus the said Delawares were deprived of their homes, and forced to seek others. They were already dissatisfied with their situation in the Cherokee country, partly because they had been badly treated, in various instances, by the Cherokees, and the protection of law had not been afforded them, as their treaty provides. They found that many of the best locations in their vicinity were already claimed by Cherokees, and under these and various discouraging influences, they concluded to make an arrangement with the confederated Peorias for the purchase of a portion of their reservation on the east of the Neosho River. Upon effecting this arrangement, they proceeded thither, and have very industriously established themselves, and opened farms, preparatory to self-support. They number about three hundred, and constitute nearly one-third of the Delaware tribe. I shall furnish the Department, agreeably to instructions, with a special report of all points of interest concerning these Delawares.

The Cherokees, Choctaws, Chickasaws, Creeks, and Seminoles are severally progressing in the avenues leading to a higher civilization. Their schools are increasing in number and interest. The enlargement of their agricultural stock-raising and other industrial pursuits are features of profound interest. I refer for information in detail to the reports of their respective agents. I have regarded the education of the Indian youth in the English tongue as of primary importance. In the wild tribes, it is difficult to persuade the parents to consign the care and instruction of their children to us. I have instructed the agents to assure all who will do so that suitable and comfortable clothing will be provided for the pupils. On behalf of these neglected and suffering children and parents, I am gratified to acknowledge the promptness with which our benevolent friends of Philadelphia and some other cities have responded to our call for aid in these deficiencies. We have received many large cases of valuable and suitable clothing, school-books, charts, and other materials adapted to their necessity and comfort. The relief thus afforded them in the time of their need has tended much to their encouragement. I have further instructed the agents of the above class of Indians, to urge upon their leading men to locate upon homes of their own, on which they can enjoy some of the comforts of civilized life. Such aid as may be in our power we propose to extend to those who are thus willing. And already some prominent chiefs and other influential Indians have accepted these offers.

Deeming it of vital importance to prevent hostile and predatory combinations on the part of the tribes of the plains, I directed, early in last spring, Agents Tatum, Richards, and Darlington to invite their Indians to meet delegates of the Creeks, Cherokees, Seminoles, and others in conference at the Wichita agency. This action was also in pursuance of a resolution of the general council of the Indian Territory, held at Ocmulgee last winter, and was taken with the hope that the bringing together of the representatives of these various tribes would have a beneficial influence upon those who had heretofore proved so troublesome. The council convened accordingly, and continued for several days, affording opportunity for full and free interchange of greetings, and a formal declaration of peace and friendship. The invitation was extended to all the tribes to send delegates to the then ensuing session of the general council at Ocmulgee, and accepted by them. The Cheyennes and Arapahoes, and the Wichitas and affiliated bands, accordingly sent forward their respective delegations, but the Kiowas did not. Kicking Bird, the present chief of that tribe, in a letter addressed to me, excused himself, on the ground that his presence with his people was necessary, at that juncture, to prevent a threatening war with the Utes.

I very much regret that the invitation of the Department of the Interior to the chiefs of the tribes in the Southwest to visit Washington was not entirely successful in its objects. In a conference with Satanta and others, some months previous, I endeavored to incline them to the acceptance of such an invitation, should it be extended to them, and also to meet their brethren of the other tribes in the next session of the general council, at Ocmulgee. His reply was, "The time has not come yet." Since the arrest of Satanta and Big Tree, I believe the leading Kiowa chiefs would willingly accept a renewal of the invitation. The best representative of the Cheyennes, Big Jake, was prevented from accompanying the delegation by a serious accident, and Bull Bear had not then returned from the north. Believing that further good results might be accomplished in this direction, I recommend a renewal of the invitation to Kicking Bird and Lone Wolf, of the Kiowas; to Bull Bear and Big Jake, of the Cheyennes; to Big Mouth, of the Arapahoes, and to Pacer, of the Apaches. The maintenance of peace upon the border depends largely upon the future movements of those chiefs, who are now under the influence of their agents more than at any previous period.

The grand idea of the Government of the United States in congregating the various Indian tribes within a limited territory, and of consolidating them under a common form of government, administered mainly by themselves, was distinctly foreshadowed in the treaties of 1866 with the Cherokees, Creeks, Choctaws, Chickasaws, and Seminoles, in which the privilege is yielded to the Government to settle friendly Indians, upon certain conditions, within their large domains, while all the guarantees of previous treaties, in regard to the exclusion of other persons from their territory, are reiterated and confirmed. The same idea is prominently indicated in the treaties of 1867 with the Cheyennes and Arapahoes, with the Kiowas and Comanches, and with other tribes, all of whom consented, upon certain conditions, to vacate their reservations, to terminate their long-continued state of warfare, and to retire to allotted districts within the Indian Territory. The policy thus indicated has been pursued by at least twenty distinct tribes or nations of Indians, now located within said Territory, by delegating to representative men of their own the power to meet in general convention, and to

provide the framework of a confederated government, which, upon ratification by said nations, will await the final disposition of Congress. The deliberations of these representatives were characterized by harmony, dignity, condescension, and ability. The assembling in common council, on terms of perfect equality, of the civilized with the uncivilized, of those largely engaged in pastoral and industrial pursuits with the nomads, who have been reared to the chase, each class extending to the other the hand of cordial friendship and brotherhood, is an occurrence of profound interest to those who are looking hopefully for indications of improvement and civilization among the red men. The Cheyenne, a stranger to the advantages of civilized life, meeting in his tribal costume for the first time in representative council, greets the intelligent Creek in his citizen dress. The Arapaho meets the Cherokee, the Apache the Choctaw, the Caddo the Ottawa, the Wichita the Peoria, &c. The untutored representative of the plains listens to and comprehends the persuasive eloquence of his Cherokee or Creek brother, as he reverts to the time when his own ancestors wore the blanket and depended upon the chase for support, and contrasts the inconveniences and disadvantages of that condition with the blessings now reaped by his people in the peaceable and prosperous pursuits of agriculture, and in that higher grade of civilization to which they have now attained. And as the delegates from the wild tribes have thus been brought into close contact with those of their own race of a more elevated condition, and have learned the avenues and the processes by which their own state may be improved, and have felt the genial influence of brotherly sympathy in promises of friendship and co-operation, a powerful impression has been made upon their minds, and they have rehearsed the good tidings around the camp-fires of their own people, telling of the better way which they have learned from their brethren, and earnestly advising a similar course. In all this they are learning what they have long desired to know; that as their Great Father is a friend to the Cherokee, so he and the Cherokees are friends to the Indians of the plains. I cannot too urgently recommend the early and complete inauguration of this joint government of the Indian tribes. I believe that it will prove, if properly supported and protected by the Government of the United States, the natural and most powerful civilizer of the race. The chief opposition to this important measure is to be found in the States bordering upon the Indian Territory, and there, strong and determined, it meets the friends of Indian civilization.

The language of General Sherman, in his report to the Secretary of War, in 1868, sets forth a solemn truth: "The only hope of saving any of these (nomadic) bodies from utter annihilation is by a fair and prompt execution of the scheme suggested by the peace commissioners," as provided in the above-named treaties. Again, ex-Secretary Cox, in an executive document, indorsed by the President, under date of May 21, 1870, says: "The policy of preserving the Indian Territory as free as possible from intrusion by white settlers, under any form, has been hitherto regarded as firmly established in this country. It has been based upon the well-known fact that the Indian tribes which are brought into closest contact with the whites have been uniformly injured by drunkenness and other vices, and the only hope of their complete civilization seems, by common consent, to rest upon our ability to keep them by themselves, under stringent laws, with regard to the introduction of intoxicating liquors, and in circumstances where immoral intercourse with the whites shall be prevented as thoroughly as possible. Negotiations for the removal of Indians from the small reservations in Kansas

and Nebraska to the Indian Territory have been based upon this policy, and in order to carry it out with any degree of success, it is necessary to adhere to it as firmly as possible. We cannot honestly advise the scattered and small tribes, now within the organized States, to migrate to the Indian Territory, except upon the honest assurance that there, with the advantages of teachers and mission establishments, and protected from the temptations which have heretofore been so ruinous to them, they may work out the problem of their possible civilization, and final incorporation into the nation."

On the basis of these treaty provisions, guaranteeing protection, the Government has negotiated with the Delawares, Wyandotts, Shawnees, Miamies, Sacs and Foxes, Osages, Confederated Peorias, Ottawas, and other tribes, who, in a confident reliance upon the solemn pledges made to them, have relinquished their cherished homes in the States, and removed to the Indian Territory. The Government is furthermore urging the Kickapoos, Pottawatomies, Kaws, and other tribes to follow the example of those who have gone southward, and is renewing to them, through its agents, the same flattering promises of security and protection. But while we are thus engaged, under instructions from the Government, we are constantly met by the utterances of the press of the border States, setting forth the most flattering and persuasive inducements to all who are seeking homes to go into the Indian Territory as a land of Paradise; and, either totally ignoring or else perverting the provisions of treaties, they assert that these lands are on the same basis as Government lands, and open to citizen settlement. Corrupt capitalists and politicians are busily engaged in disseminating these mischievous sentiments, and multitudes of settlers are deceived thereby.

The Government has no greater obligation unfulfilled than the stern enforcement of this guarantee of protection to the wronged and defenseless Indian in this his last and only home. He cannot again seek an asylum from the advancing hosts of white men either eastward or westward, northward or southward, and, in the language of General Sherman, "he must *there* be civilized, or by the opening of his lands to his white brother, he will be exterminated from the face of the earth by an inevitable and irresistible influence. The former course is just, possible, and expedient; the latter cannot be entertained by a Christian nation."

Respectfully,

ENOCH HOAG,  
*Superintendent Indian Affairs.*

---

No. 65.

UPPER ARKANSAS AGENCY,  
NORTH FORK OF CANADIAN RIVER, INDIAN TERRITORY,  
Eighth month 26, 1871.

**ESTREMED FRIEND:** In compliance with the regulations of the Indian Bureau, I submit the following as my third annual report of the Indian tribes connected with this agency:

It gives me great pleasure to report considerable advancement in the objects connected with this agency since making my last annual report.

Of the two great tribes who constitute the inhabitants of this reservation much has been said and written, within the past twelve months, of their intention to commence active hostilities as soon as grass grew in

the spring, but not one hostile act has been committed by any of them since the latter part of 1870, and we know of but one instance of any depredation being committed since my last annual report.

#### THE ARAPAHOS.

This tribe left the vicinity of the agency last fall, where they had been all summer, to avoid being dragged into the troubles then existing among the tribes in the south and west, and proceeded up the North Canadian to Beaver Creek and its tributaries, on their annual buffalo hunt, to procure skins for new lodges—the exceeding wet season just experienced having destroyed all their old ones—and robes, for trading purposes, conducting themselves in accordance with my wishes, fully communicated to them previous to leaving the agency. I would say in this connection, that it is impossible for me to speak too highly of the conduct of these people under the most trying circumstances; always peaceful and well disposed, they have done all in their power to conform to the wishes of the Department concerning them. Having been born in ignorance and heathenism, that much vice prevails among them is to be expected; especially among the women and children is this discernible. Thieving is their most besetting sin, and when located at the agency, in daily contact with the families of employes and traders, it soon became apparent that if peace was to prevail an effort must be made to put a stop to this. Accordingly a council of chiefs and headmen was called, and the matter, through competent interpreters, fully explained to them, and their assistance in the removal of this great evil desired. They readily promised to do what they could, and gave me much valuable aid in this important matter; the result is, that the evil is greatly abated, and I am in strong hopes of entirely eradicating it at no very distant day.

By the aid and assistance of female helpers, much good has been done among the squaws and children, in teaching them to bake wholesome bread, to cut and make garments for themselves and families, and urging them, by precept and example, to habits of industry and cleanliness. In my opinion, nothing can be of more service in the speedy civilizing and christianizing of these people than the efforts of earnest Christian women. Observing their desire for good bread, and the general lack of proper cooking utensils, I have caused an agency bakery to be established, where the flour, when issued, can be taken and baked, and it has proved conducive to the health and prosperity of the agency.

The last winter's hunt realized a bountiful harvest of excellent robes, and the necessity arising, permission was given to the traders to visit the camps for a short period, which proved quite satisfactory to the Indians.

Early in the twelfth month I began to issue the usual annuity goods, which consisted, last year, of 600 pairs blankets, 1,024 yards calico, 16,909 yards of blue drill, 250 pairs pants, 250 coats, 682 shirts, 500 hats, 40 dozen butcher-knives, 40 dozen coffee-pans, 400 frying-pans, 300 iron-tinned kettles, 875 pairs socks and hose, 102 pounds linen thread, 10,000 needles, and 10 dozen sieves to such bands as from time to time visited the agency, giving to each chief or head brave his pro rata amount of goods, according to the number of lodges so represented. By this method I reach every man, woman, and child in the tribe, and each one feels that his share awaits him when it suits his convenience to come and get it; and although it makes much more labor to issue the annuities in this way than to issue all at one time, we have never

been able, heretofore, to get the whole tribe together at any one time, so as to make a fair distribution in any other manner.

In the third month, the buffalo season being over, the Arapahoes began to return to the vicinity of the agency, and by the 1st of Fourth-month they were all encamped within a radius of three miles of the agency, and I began to agitate the question of raising corn. Calling a council, I gave them, as clearly as possible, my ideas of the benefits to be derived from adopting the white man's road of obtaining a living by tilling the soil, the raising of corn, stock, &c., and explained at length the intentions of the Government toward them, and of the real object of our presence among them, and ended by calling for volunteers to lead in this important work. Many of the leading men of the tribe adopted my views and promised to undertake the work.

Prominent among the latter was Big Mouth, who has always, since my connection with this agency, been foremost in taking the lead in anything promising to be of lasting benefit to his people. I cannot too highly recommend the conduct of this chief to the notice of the Department. Where all have done well, and are entitled to special favors at the hands of the Government, his unswerving fidelity merits proper and beneficial recognition. He was the first one to come to the agency last year, and openly avowed his determination to follow the "white man's road," selected a tract of land which I had broken and fenced, and which he had planted in corn, pumpkins, melons, &c., but unfortunately, owing to the destruction of his fence by fire, the crop was entirely ruined by stock. Nothing daunted, he the present season again entered upon the new way by preparing the land and planting a new crop, which now promises an average yield. He has 25 acres of corn, of which he is justly proud.

A few other chiefs, influenced by his example, have also planted small tracts in corn and melons, more as an experiment, however, than a certain knowledge of benefit to arise therefrom. In this way, by urging, encouraging, and assisting, to the extent of my means, I have succeeded in getting some 60 acres planted and being cultivated by Indians, with a fair prospect of an average harvest, and a renewed faith in the ultimate success of farming among the Arapahoes.

It should be taken into consideration that these people, from time immemorial, have lived entirely upon the fruits of the chase, and not only was labor unknown to them, but was, and still is, considered highly degrading to the male portion of the tribe; and this is one of the worst influences that we have had to contend with in prosecuting this work, and has been greatly augmented by Little Raven, head chief of the Arapahoes, who most persistently inculcates the doctrine that it is not the intention of the Department for Indians to work, but that the white men—*i. e.*, employés—are sent here for the purpose of raising corn for the Indians.

Most of the chief men of the tribe visited the council for Indians at the Wichita agency, which convened on the 24th of Fourthmonth last, and lasted nearly a week, and in their absence the young men conceived the idea of making a raid into the "Ute country," toward whom they entertain hostile feelings that they do not disguise. Upon the return of the chiefs from the council, the discovery was made that a number of them had already started, and more were preparing to join them. As soon as we learned those facts, a council was called, composed of many of the leading men and some of the younger ones who were to join the expedition. We represented to them the consequences of such a step, and urged upon them the necessity of taking some measures to prevent

it, to which they readily responded by sending out in pursuit two of their war chiefs, accompanied by one of my employés, a resolute and reliable man. They returned in three days with the whole party, numbering over seventy warriors, having performed a journey of one hundred and forty miles, and finding the party they were in pursuit of encamped on one of the tributaries of Wolf Creek, southwest of Camp Supply. The Arapahoes staid at or near the agency until the 1st of Seventhmonth, when they again started for the buffalo.

#### THE CHEYENNES.

The Cheyennes were to some extent connected with the Kiowas in their depredations into Texas last fall, but since the first of this year they have refrained entirely from any demonstration of this kind, with one exception. After finishing their winter hunt, they came into the agency, staid a few weeks to recuperate their ponies, and again departed for their summer camps, as they have never, with the exception of fifty or sixty lodges, been willing to settle down during the summer at the agency, as do the Arapahoes, but scatter from fifty to one hundred and fifty miles up the North Canadian and its tributaries. Previous to their leaving the agency I had a talk with the leading chiefs, in which I warned them against having any intercourse with the Kiowas, and urged upon them the necessity of remaining quietly upon their reservation. In reply, they gave me the strongest assurance of their intention to comply with my wishes.

Most of the tribe were congregated near the Antelope Hills, southwest of Camp Supply, at the time of the arrest of the Kiowa chiefs at Fort Sill by General Sherman.

The enraged Kiowas repaired at once to the vicinity of the Cheyenne villages, and used every art known to Indian diplomacy to prevail on them to join the Kiowas in a general warfare against the whites; but, to their credit be it said, they nobly resisted their importunities, and finally, to get rid of them, the Cheyennes moved their camps down to within a few miles of Camp Supply. Subsequently, in company with General Davidson and Joseph D. Hoag, of Friends executive committee, I had an interview with Little Robe, Stoné Calf, and other Cheyenne chiefs, who were at Camp Supply, in company with a Kiowa chief, for the purpose of getting permission for his people to remain on the Cheyenne reservation. This was refused, of course, and he was advised to return to his people and do all in his power to effect a peaceful settlement of existing difficulties.

The next day Joseph D. Hoag and myself visited the Cheyenne villages, and met the chiefs of the entire tribe, when a long talk ensued on matters of general interest to the Indians, and found them disposed to use their influence to prevail, if possible, with the Kiowas to comply with the requisitions of their agent and General Sherman.

The Cheyennes seemed to rejoice at their success in keeping their young men from getting mixed up with the Kiowas, and gave me strong assurances of their peaceful intentions in the future, and of their entire satisfaction with the treatment they received at the hands of the Government.

The exception before referred to was an attempt made some time in the fifth month, by a considerable number of Cheyenne warriors, to make a raid into the Ute country, which was prevented by the timely appearance of a squadron of the Tenth United States Cavalry, sent out to intercept them by General Davidson, the commandant at Camp Sup-

ply. The Indians were easily persuaded to give up the enterprise, and returned to camp. General Davidson has probably reported the particulars of this affair. Their plea was that the Utes were trespassing on their reservation, which, however, I apprehend was a mere subterfuge, as there is no definite boundary to this reservation on the west, although it is very desirable that there should be.

In the interview above referred to I gave them clearly to understand that the Utes were on friendly terms with the Government, and that any attempt by either party to make war with the other would be severely punished. The Arapahoes also understood this, and I hope it will have the effect of preventing any further attempts in that direction.

On the 10th of Eighthmonth the entire Cheyenne tribe paid a visit to the agency, together with a number of Northern Cheyennes, who returned to this reservation during the fifthmonth last, with Bull Bear and party; consequently it was their first visit to the agency. They expressed themselves as well pleased.

In a council held with the leading Cheyenne chiefs, I took occasion to commend them for their past good conduct, and expressed a hope that it would continue. They all cordially indorsed my views, and assured me of their purpose to live at peace with all; that they had been got into trouble two or three times by listening to the Kiowas, but that now they had "thrown them away," and would have nothing more to do with them. They deserve great credit for this, as it is well known that the two tribes are largely allied by intermarriage.

The Cheyennes staid about a week at the agency, and then, drawing a month's rations, they started up the North Canadian for buffalo. They evince, as a tribe, but little disposition to adopt the manners and customs of the whites, or to undertake the raising of corn and other products, there being but two Cheyenne families so engaged this summer, raising in the aggregate fifteen acres of corn and pumpkins. Their excuse, when urged upon this subject, has always been, that they would wait and see how the Arapahoes succeeded first.

#### SCHOOLS.

The first of this year I had two schools established, one for Cheyennes and one for the Arapahoes, at the agency, but not having been able to erect a proper school-house, a temporary building used for employes was vacated, partitioned off into two rooms, and fitted up, until the school-house or mission building could be built.

The success attending this movement has been beyond my most sanguine expectations, great interest being manifested by all parties concerned, and the children learning rapidly, although we labored under many great disadvantages in not being able to communicate with the children in their native language, but having to depend on the "sign-manual" altogether. While the Indians remained at the agency, during the spring and summer months, great advancement was made, but as soon as they left on the fall hunt, many of the children were necessarily withdrawn from the school, at a time when their presence was particularly desirable. This is a serious obstacle to the educational interest among these roving tribes of Indians, but I trust that as soon as I am able to have the mission building erected, and arrangements made for boarding the children, this latter evil can be greatly alleviated, if not entirely overcome. I append the teacher's report of advancement, daily attendance, &c.

## IMPROVEMENTS.

Since making my last report I have caused to be erected, in compliance with treaty stipulations, one agency building, one dwelling-house each for carpenter, blacksmith, and farmer; also, one house for employés, and a commodious blacksmith shop, which I find to be a useful building to the agency. I have had one of the two large warehouses belonging to the Department, and situate at Camp Supply, to be carefully taken down and transported to the agency, where it has been re-erected at less than half the original cost, and stands almost as good as new; it has already done good service in our large commissary department. I have also perfected arrangements for the removal thither of the remaining warehouse, in anticipation of the arrival of this winter's supplies.

I have had cattle-scales erected at a suitable distance from the agency, with a substantial corral attached, for the correct delivery of beef for the Indian Department; this supplies a want long felt, and reduces to a system the hitherto rather uncertain manner of filling beef contracts for Indians.

## FARMING.

In this department of the agency there has been considerable progress made during the present season. I have had 2,100 rods of effective wire-fence built, inclosing two tracts of land of over 200 acres each and one of 30 acres, a part of which was broken up last year, the remainder the present season. All the old ground and a part of the new breaking was planted with corn, which has attained a very fine growth, proving beyond a doubt the adaptability of this soil to the raising of corn; but a severe drought prevailing about the time of earing, the yield will be largely diminished.

No opportunity has offered yet for testing this soil and climate as to its adaptability for raising other cereals; but an experiment in that direction will be made the ensuing season.

The success of getting the Indians to take hold of agricultural pursuits has not been as great as I could wish, for reasons already explained, but I feel that we have every reason to be greatly encouraged at even our partial success; and I am of the opinion that the Indians of this agency, who but a few years since were "the terror of the plains," have shown themselves, under proper treatment, not only worthy, but capable of being advanced in all the avenues of civilization.

Our own efforts in the raising of corn has been attended with better success. Of the first planting of 200 acres, fully 40 acres has been destroyed by birds, cutworm, &c., and the replanting, owing to the dry weather, did but little good. The corn crop, when fit for eating, suffered severely from inroads by Indians coming and going to the agency for rations, &c., and they have shown themselves, however poor they may be in raising corn, entirely successful in boiling roasting-ears. I estimate—

|                                             | Bushels.     |
|---------------------------------------------|--------------|
| 160 acres, at 25 bushels per acre .....     | 4,000        |
| 60 acres, at 15 bushels Indian-raised ..... | 900          |
| Total raised.....                           | <u>4,900</u> |

Last winter, during the extreme cold weather, many ponies belonging to the Indians of this agency perished from exposure and the scant amount of food to be obtained at that inclement season of the year. I

have endeavored to impress it upon the minds of these people the necessity of making suitable arrangements for the wintering of their stock, but with no utensils for making hay, and a decided inclination to trust to the usually mild winters experienced in this climate, when the buffalo grass remains green the entire season, I have failed to make much of an impression on them of the importance of this careful forethought.

With such limited means as I have had at my command, and to remedy last winter's bitter experience, I have caused to be cut and stacked 200 tons of good prairie hay, to be used as the good of the service may seem to demand.

In concluding this report, permit me to express my gratitude to the Department for their many kind endeavors to sustain me in this important though distant field of labor.

The past year has been one of peculiar hardships and trials, surrounded on all sides by an element in direct opposition to the grand principles of Indian civilization. I have realized more than ever the necessity of a firm reliance on divine aid for guidance and support.

Respectfully,

BRINTON DARLINGTON,  
*United States Indian Agent.*

ENOCH HOAG,  
*Superintendent of Indian Affairs.*

No. 66.

*School report for Cheyenne and Arapaho agency.*

EIGHTHMONTH 25, 1871.

Previous to the present year nothing had been done toward the school education of the Indians on this reservation. A day-school was opened at New Year's, and very successfully conducted by Jesse R. and Elma Townsend. Both the Cheyennes and Arapahoes received instruction, and evinced considerable ability and aptitude for learning. Since Fifth-month 1, the schools have been under the care of Julia A. Cattell, teacher of the Arapahoes, and Alfred J. Standing, of the Cheyennes. Our statistics of attendance extend only over this period and give, for the Arapaho school, an average attendance of 17; to that of the Cheyennes, an average of 8.

The Arapaho school has been the more successful, the attendance more regular, and greater willingness to receive instruction.

Owing to the antipathy existing between these two tribes, it has been necessary to have a separate building for the Cheyennes. They are quick at learning, but, owing to irregular attendance, their general progress is not nearly as great as the Arapahoes'.

The method of object-teaching has been followed as far as practicable with the apparatus at our command. Printing words on the slate has formed an important part of our school exercises, and many of the pupils can do creditable work in this line.

There is a marked improvement in those children who have been regular attendants at school. They are well-behaved and cleanly in appearance. Through the industry of their teacher and a donation of clothing from Friends, of Philadelphia, many of the girls have been sup-

plied with neat calico dresses, and present a respectable appearance. The boys nearly all wear blankets. A few have been supplied with clothing from the same source.

We can do but little in imparting religious instruction until we are better able to communicate in language understood by the children.

ALFRED J. STANDING.

JULIA A. CATTELL.

### No. 67.

#### INDIAN BOARDING SCHOOL.

KIOWA AND COMANCHE AGENCY,  
*Fort Sill, Indian Territory, Seventhmonth 27th, 1871.*

LAWRIE TATUM,

*United States Indian Agent:*

As requested I submit the following report:

School opened Secondmonth 20, 1871. The first term closed Seventhmonth 3, 1871. The second term will begin Ninthmonth 4, 1871. Whole number enrolled, 24—males, 17; females, 7; Comanche, 7; Caddoes, 16; Delawares, 1; average daily attendance, 16 $\frac{3}{4}$ .

The low average is accounted for as follows: Four of the Comanches, after being in school six weeks, were taken away by their chief on account of the death of one of his squaws. Another Comanche, (wife of our interpreter,) after being in school two months, quit on account of family cares; her son (who was really too young to attend school) quit at the same time, and eleven of the scholars did not enter school until it had been in session four weeks. My manner of instruction is "object-teaching." Spelling, reading, and writing have been regularly taught in the school. Oral instruction has been given in geography and arithmetic.

When school opened one could read in words of two or three letters; two others knew a part of the alphabet; the rest knew nothing of letters. Their progress in learning has been satisfactory. Particular attention was given to their spelling exercises, and they were able to spell from memory all the words in their respective reading lessons. They were very apt in learning to write; ten were writing with pen and ink; six others were writing on slates; eight were printing on slates. Kept all printing until they thoroughly learned the alphabet before allowing them to make the writing-letters.

The exercises in geography were principally confined to the United States; they learned the names of the States and Territories, and their capitals. They learned the use of numbers in counting and adding up small amounts. There seemed to be more difference manifested in the capacity of the scholars in this branch than any other, some being very ready, while others were extremely dull. Discovered but little difference in the capacity of the children belonging to different tribes. The children I think have been remarkably content and happy. They have been studious and interested in their lessons. They have been obedient and orderly in school and out. My greatest difficulty has been to get them to converse in English. In government have endeavored to be kind, but firm. No one has ever left school without our knowledge or permission. I taught five days in each week, and four and a half hours in a day. The children have been fed, lodged, and clothed here, (their

clothes were made out of the annuity goods,) my wife acting in the double capacity of matron and seamstress. While furnished with a good sewing-machine it was no small task to keep twenty-four children suitably clad. It made a marked change in the appearance of the children when they came to exchange their blankets, breech-cloth, leggins, &c., for our style of dress; also had their hair shingled, and the paint and various gaudy ornaments were willingly left off.

A part of the time on Seventhday of each week the larger boys worked at the agency saw-mill, for which they received 50 cents per day each. My wife gave the girls some instruction in sewing. We have had a Sabbath-school for the children, in which we have endeavored to instill morality and religion into the minds of the students. No serious case of sickness occurred during the term. All the exercises in the school have been conducted in English except the instruction given in Sabbath-school, which was interpreted for them.

Notwithstanding the labor, anxiety, patience, and forbearance that have been necessarily expended, we feel encouraged as to the past, and hopeful as to the future; believing, with the blessing of God, our labor will not be in vain.

Respectfully,

JOSIAH BUTLER,  
*Teacher.*

---

WICHITA AGENCY, INDIAN TERRITORY,  
*Eighthmonth 28, 1871.*

DEAR FRIEND: In compliance with the regulations of the Indian Department, and instructions contained in circular letter dated June 10, 1871, I hereby submit my second annual report.

Since my last report some progress has been made in various matters, then in contemplation, for the advancement of the Indians under my care in the way to a civilized life.

After reaching the agency and commencing operations in the ninth-month last, the heavy autumnal rains set in, raising the rivers and overflowing the country in an unusual manner. Being hemmed in on every side by high water retarded our work very much, but we did what we could under the circumstances in building stables and corrals for our animals, getting out logs for a corn-crib, and other purposes, and in making preparations, as far as practicable, for agency buildings. But when my family removed here and we were joined by others in our work, there were no buildings ready for use, either for the agent or employés, and no place for storing commissary supplies or goods of any kind. They arrived in the winter, and the weather, being unusually cold and stormy, rendered the purchase of a building, which had been erected for a store-house and dwelling, and was offered for sale by the trader, necessary, not only for the protection and health of those engaged in our Indian labor, but for the preservation of property. The building being well adapted for use as a store-house for subsistence stores, and having useful appurtenances, was accordingly secured. Its use for the various purposes mentioned saved us more or less suffering during the cold weather of winter and early spring, and has been a protection to the goods of various kinds stored in it, which otherwise would have been injured or lost.

We now have a comfortable house for the use of the agent, well finished, 20 by 28 feet, one and a half stories high, two rooms and an entry,

with open stairway being on the first floor, and three rooms on the second, having a cellar under and a kitchen 10 by 15 feet attached. A cistern for rain water has been made under ground of a capacity to hold over 150 barrels, being strongly built of stone and well cemented. It is proposed to cover this cistern with a building to contain a wash-room, store-rooms, a dining-room, and kitchen, and lodging-room for employées, having a cellar under for milk, butter, and other purposes. The wall of the cellar has been already built.

We are now pretty well supplied with stockade or picket buildings, such as stables, a carpenter-shop, eating-house, corn-crib, pig-pens, and corrals, mostly of a temporary character, which will answer the purposes for which they are used until they can be replaced by others more permanent.

One of our great troubles is the want of good water. I have had two wells dug, both of which came into quicksand, and although we persevered in working partly through, and walled them up, as was thought permanently, yet the wall afterwards began to give way and the wells had to be filled up. The water of this region is more or less affected with sulphur and other substances. In many places, indeed, it contains so great a quantity it is entirely unfit for general use.

A piece of ground was broken and fenced in the early spring, near the agency house, for a garden, which had furnished a good supply of vegetables and promises a fine crop of sweet potatoes. I have, also, had planted seventy-five peach trees, and a few apple and cherry trees, which are mostly in good condition.

At the different Indian villages the ground previously broken was plowed during the winter and spring, and all that was not previously fenced has been substantially inclosed.

The Caddoes, at their main village, planted over 100 acres in corn, melons, pumpkins, and garden vegetables, which they carefully cultivated, and have realized a good return for the season. The universally dry weather is, however, damaging the crops. There has not been any rain in this vicinity sufficient to wet the ground for nearly three months, and the drought, continuing through earing time, is destroying large quantities of corn. The other Caddoes have cultivated parcels of ground in smaller quantities, that in the aggregate will amount to nearly as much as that at the village above referred to, and with similar success.

The Delawares have under cultivation nearly as much, perhaps, as the Caddoes. Black Beaver alone has about 100 acres of corn, which was well planted and tended, but the dry weather will cut off his crop very far short of what it otherwise would have been. He has also raised a small quantity of oats, and sown some Hungarian grass-seed.

The Caddoes, Delawares, and Ionies have turned their attention to raising cattle and hogs, and some of them have herds of considerable size.

The other bands continue their old habit of cultivating small patches of land, the work being mostly done by women. They have no cattle or hogs, but some of them express a desire to commence farming next year, and, as they manifest a disposition of a favorable character, I am encouraged in the belief that another year will show a great improvement in the condition of these bands.

The land not cultivated by the Indians has been planted in corn, oats, potatoes, and a small quantity of sorghum by agency labor. About 25 or 30 acres was sown with oats, 6 acres planted with potatoes, and about 1 acre was put in with sorghum. The remainder of that which was

plowed was planted in corn, that being the main crop. The oats have done well, and is now in stack at the agency. I suppose the yield will amount to 800 or 1,000 bushels. The corn, like that planted by the Indians, is suffering from the drought. Owing to the lateness of the season before we were able to get our seed-potatoes, they were not planted till the time the dry weather set in, and the crop has been a failure.

We have labored under many disadvantages for want of a saw-mill. Our great distance from railroads or places where lumber and other building materials can be purchased has made our advancement in buildings slow and unsatisfactory. There is now, however, a saw-mill and also a mill for grinding grain on the way to the agency. When it arrives here, and we get it in running order, we intend pushing forward our buildings at the Indian villages, by which greater facilities for the improvement of these people will be afforded. A farmer's house and school-house at one of the villages will be the first to claim our attention. I desire to place a good farmer and an experienced teacher at each village, where a sufficient number of children can be brought together to support a school, and it is my aim that one of these parties at least shall have a family, some of the female members of which can instruct the Indian women in household and other duties appertaining to their sex in civilized life. The influences of such families, if properly qualified for the work, cannot but be productive of good in guarding the Indians from the influence of intruders and encouraging them in the way of an enlightened and Christian people.

A school was opened in the spring and continued until the warm weather of summer, with encouraging success, but our facilities for conducting schools being very limited, there has not been as much done as the state of the Indians require. The school referred to is now temporarily suspended until the first of next month.

I would again respectfully call attention of the superintendent and the Department to the subject of setting apart a reservation for the Wichitas and other affiliated bands with defined boundaries. The matter was referred to in my last annual report, and in adverting again to the subject, I would call the attention of the Department to the necessity of prompt action in urging upon Congress the importance of extending to these deserving Indians every facility practicable for their advancement and enlightenment, of which, I think, this is one of much importance. In presenting this subject I would refer to the fact that in a treaty held with the Wichitas and other affiliated bands at or near Fort Arbuckle and Brazos agency, in or about 1858-'59, the title of the Wichitas was recognized to the land on which they now reside, and extending from the Red River to the Canadian. The country since granted to the Kiowa and Comanche Indians embrace that of the Wichitas, the boundaries being the Red River on the south and the Washita on the north. For these lands no compensation has been awarded the Wichitas. I would suggest that these are subjects of special moment to the Indians interested, and I would recommend the necessity of appointing a commission to take the whole matter under care for examination and final adjustment, and that the action of Congress be solicited to that end.

These Indians, more especially the Caddoes, are exerting their influence with the Kiowas and other Indians of the plains, endeavoring to dissuade them from their raiding propensities and wild manner of living, and in encouraging them to settle down on their reservations; and in a recent talk of Kicking Bird, chief of the Kiowas, with their agent, Lawrie Tatum, Kicking Bird told him that he and his people intended

to settle down and live like the Caddoes. Warloope, the Caddo chief, told me, a few days ago, that Kicking Bird had promised him to do all he could with his people to change their manner of living and become settled in permanent homes. It is my conviction that if the affiliated bands of this agency are properly encouraged and assisted they will not only make rapid improvement themselves, but their influence and example will have a salutary effect upon the wild Indians of the plains, who have been giving so much trouble.

Whatever may be done for the Indians, it is important that they should, at the proper time, be thrown upon their own resources for a living. But before this can be brought about they will require assistance in providing implements for farming, in breaking up new land, in erecting buildings, and in commencing stock raising; and until they can raise good crops and are established in raising stock they will have to be fed. A permanent fund should be invested in some way, the income from which could be used for the support of a manual-labor or boarding school, and day-schools, and for some improvements of a general character.

There has been no complete census taken of our Indians since last report, but in the aggregate they remain about the same in number. There have been some slight changes among themselves, some bands falling off somewhat and others having correspondingly increased.

The rains of last autumn, raising the streams to an unusual height, filling up all the old bayous and basins in the bottom lands, left large bodies of water standing in many places where it had been entirely dry for many years before. This being followed by a very dry summer has caused more sickness, I understand, than usual. Not having been able to procure the services of a physician has made our situation, at times, trying, but there have been no deaths among the white residents or employes, and but few among the Indians.

Our acknowledgment is due to the liberality of Philadelphia Friends for a donation of charts, books, and other valuable articles for our schools, and also for a large quantity of clothing. The clothing was particularly useful in protecting many of our Indians who were destitute. Both children and infirm women were clothed, and many of the men received garments they much needed with marks of thankfulness and gratitude. The articles for the schools are just what we need, and as far as we have gone in teaching they have been used successfully.

To kind Friends of Lawrence, Kansas, we are indebted for a donation of various articles; and to the children there we are under special obligations for pins, needles, buttons, thread, and a variety of things for the comfort and amusement of the Indians.

We are also indebted to Philip McCusker for the introduction of a remarkably fine pair of pure Berkshire pigs.

Before closing this report, I would bring to favorable notice the valuable services of those employes who have been industriously and cheerfully assisting in our work, and express my thanks for the many obligations I am under for the prompt attention my wants have received at thy office, and for thy kind co-operation and assistance.

Very respectfully,

JONATHAN RICHARDS,  
*Special United States Indian Agent for the  
Wichitas and other Affiliating Bands.*

ENOCH HOAG,  
*Superintendent Indian Affairs, Lawrence, Kansas.*

## No. 69.

KICKAPOO INDIAN AGENCY,  
*Muscotah, Kansas, Ninthmonth 20, 1871.*

MY FRIEND: I herewith present my second annual report for this agency, together with sub-reports from two teachers. Have just completed a personal visit to every hut and wigwam in the agency, and am prepared to make a pretty accurate report of the farm interests of the tribe from actual observation. The tribe numbers 297—males, 151; females, 146; children of suitable age to attend school, 65; number whom we think can be got in school, 35 to 40.

The Kickapoos have manifested a good degree of interest in farming during the past year, and have been well paid in good crops for their labor. The following is an exhibit of their farm products, and an estimate value, together with an approximate value, of their household and personal effects, to-wit:

|                                                             |            |
|-------------------------------------------------------------|------------|
| Wheat raised this year, 1,827 bushels, at \$1 .....         | \$1,827 00 |
| Corn raised this year, 22,630 bushels, at 25 cents .....    | 5,657 50   |
| Oats raised this year, 1,840 bushels, at 25 cents .....     | 260 00     |
| Beans raised this year, 254 bushels, at \$2 .....           | 508 00     |
| Potatoes raised this year, 1,815 bushels, at 25 cents ..... | 45 37      |
| Turnips raised this year, 399 bushels, at 20 cents .....    | 79 80      |
| Hay cut this year, 388 tons, at \$3 .....                   | 1,164 00   |
| Sorghum made this year, 437 gallons, at 50 cents .....      | 218 50     |
| Pumpkins raised this year, 100 loads, at \$1 .....          | 100 00     |
| Total .....                                                 | 9,860 17   |

Number and value of stock, to-wit:

|                                                         |             |
|---------------------------------------------------------|-------------|
| Number of horses, 249; estimated value, \$50 each ..... | \$12,450 00 |
| Number of cattle, 129; estimated value, \$25 each ..... | 3,225 00    |
| Number of hogs, 465; estimated value, \$3 each .....    | 1,395 00    |
| Number of sheep, 48; estimated value, \$2 each .....    | 96 00       |
| Total .....                                             | 17,166 00   |

Number and value of farm implements, &c., to-wit:

|                                                                   |            |
|-------------------------------------------------------------------|------------|
| Number of wagons, 55; estimated value, \$80 each .....            | \$4,400 00 |
| Number of harness, 52; estimated value, \$20 each .....           | 1,040 00   |
| Number of plows, 128; estimated value, \$8 each .....             | 1,024 00   |
| Number of reapers and mowers, 8; estimated value, \$80 each ..... | 640 00     |
| Number of hay-rakes, 8; estimated value, \$5 each .....           | 40 00      |
| Number of saddles, 61; estimated value, \$5 each .....            | 305 00     |
| Number of sorghum-mills, 3; estimated value, \$25 each .....      | 75 00      |
| Total .....                                                       | 7,524 00   |

To the above we may add \$25 each for ninety families in the tribe, for household and personal effects, \$22,500, and we have a total valuation of \$34,550 17.

## SCHOOLS.

The Kenneknk Mission school has been in session during the past year, with the exception of a short vacation during hot weather, and taught by Lizzie Miles, with an average daily attendance of 13 and a fraction, which, when taken into consideration with the whole number enrolled, (19,) will indicate a pretty prompt attendance. The children in this school have made very fair progress in their studies, and are not generally behind their white neighbors in the possession of a literary knowledge; most of them speak our language quite well.

The Walnut Creek school was opened on the 12th day of Tenth-month, 1870, and continued until Thirddmonth 31, 1871, under the charge of Edward King, of Indiana, as teacher. Whole number of pupils enrolled in this school, 17, with an average daily attendance of about 13; and, although there are many difficulties to contend with in this school, yet we feel confident that under the efficient labor of Friend King some good has been done.

#### THE SABBATH SCHOOL

at the *old mission* has been kept up regularly during the past year, under the care of Lizzie Miles and others, and of all other missionary labor this is the most pleasant, from the fact that, in the effort to sow the "good seed" in the hearts of these dear children, the laborers themselves are receiving a rich blessing.

During the past summer this little Kickapoo school gave a public Sabbath-school entertainment at the village of Muscotah, which was largely attended by the children of the village and adults, including some ministers, one of whom remarked, publicly, that "If any of us have hitherto entertained any doubt about the subduing influences of a careful Christian training over the wild natures of the red man, we have surely seen, heard, and felt enough here to-day to forever banish such doubt," &c.

Owing to the many difficulties with which we have had to contend in the proper control of our labors in the day-schools, it was decided to open a boarding and industrial school for the Kickapoos, and in accordance with verbal instructions from thyself we have purchased the buildings known as the Rising Station, situated near the western boundary of the diminished reserve, in Brown County, at an expense of \$515, which, with an additional expense of about \$500 for additions and remodeling, will make a building quite sufficient and comfortable for the occupancy of forty school-children; and in addition to this building we have also had erected near by a good frame school-house, to be well seated with patent seats, and every other convenience, ready for occupancy, 20 by 30 feet in size, at an expense of \$1,065, all of which will be ready for occupancy by the 10th of next month. For the proper carrying on of this institution it is thought best to employ two additional laborers, (a man and his wife,) to serve as superintendent and farmer and matron, and application has been made by William D. Jones and wife, of Indiana, for this position, at a joint salary of \$1,000 per year, and if sanctioned by the Indian Bureau will take the responsible position about the middle of next month.

#### MORTALITY.

There has been quite a number of deaths in the tribe during the past year, and about an equal number of births. No-koh-wart, the oldest chief in the tribe, died very suddenly of heart disease on the evening of Fourthmonth 1st last. He was the chief who headed a band of about 100 in 1864, to join their brethren in Mexico, giving as his reason for this movement the "treaty swindle" of 1863, he refusing to be a party to said treaty. On the 26th of last month Pah-the, the next chief in the tribe, was killed by Paw-y-tuk, another Indian belonging to this tribe. Paw-y-tuk was under the influence of whisky at the time he committed the crime, and we regard the party who furnished him the whisky the murderer of Pah-the, and his arrest has been secured.

The general tendency of most of the Kickapoos is for the promotion of good morals, and increased energies in their farming, and quite a goodly number are very prompt in their attendance at their places of worship on the Sabbath day, and during the past year have made accessions to their numbers in the household of faith. They have erected a very comfortable church building during the past year, which seems to add much life to their exercises.\*

Trusting that every year may show some little advancement, I am thy friend,

JNO. D. MILES,  
*United States Indian Agent.*

ENOCH HOAG,  
*Superintendent, Lawrence, Kansas.*

No. 70.

KICKAPOO MISSION-SCHOOL,  
*Kennekuk, Kansas, Ninthmonth 16, 1871.*

DEAR BROTHER: I take pleasure in reporting the condition of the school for the education of Indian children under my charge from Ninthmonth last, 1870, up to the present date:

Whole number of pupils enrolled, 19; highest number any one day, 17; average number during the year, 13; number of boys, 8; number of girls, 10; number reading in Fourth Reader, 2; number in Third, 5; in Second, 6; in First, 4; on chart, 2; studying geography, 5; primary arithmetic, 8; some write very good; all are beginning to write.

The general deportment of the children has been highly satisfactory, and the progress in learning and attention to study will compare favorably with any school of white children heretofore under my charge.

Had six weeks' vacation during hot weather in Seventh and Eighthmonth. Several of the children speak very good English.

Most of this tribe seem much interested in the education of their children, and we think the prospect favorable now for a full school this winter at the new mission.

I would say, in connection with this day-school, that we have also had Sabbath-school during the past year, which has been of great benefit to the children. All seem greatly interested in learning Scripture texts and singing, and never tire of hearing Bible stories told them.

Thy sister,

LIZZIE MILES,  
*Teacher.*

No. 71.

KICKAPOO INDIAN AGENCY,  
*Muscotah, Kansas, Ninthmonth 1, 1871.*

DEAR FRIEND: It is my pleasure to report the educational interests of the Walnut Creek Kickapoo Indian School, from Tenthmonth 12, 1870, to Thirteenthmonth 31, 1871, to wit:

Whole number of pupils enrolled, 17; highest number any one day,

\* For report in regard to an interview with the exile Kickapoos residing in Mexico, I will refer thee to my special report on that subject under date of Seventhmonth 13, 1871, a copy of which has been forwarded to thee.

15; average daily attendance, 13; number of boys, 8; number of girls, 9; number reading in Third Reader, 4; number reading in Second Reader, 6; number reading in First Reader, 9; number spelling, 2; number studying arithmetic, 10; number writing, 12.

I found by having system in all the proceedings of the school-room, and adopting such rules as are conducive to good order, and never permit them to be violated with impunity, that the scholars soon learned to admire such a course, and, with few exceptions, found their government to be comparatively easy.

Good advancement was made in their studies by all who attended at all regular, but rather slow progress in learning to speak our language. I visited the homes of the students several times during the school, and explained to their parents the importance of sending their children to school *every day*.

By taking the children entirely away from their parents, and putting them in a boarding-school, I think many of the difficulties that are continually met with in the day-school can be obviated, and the children learn more rapidly the habits and customs of the white man.

Thy friend,

EDWARD KING,  
*Teacher.*

JOHN D. MILES,  
*United States Indian Agent.*

## No. 72.

NEOSHO AGENCY, KANSAS,  
*Montgomery Post-Office, Tenthmonth 1, 1870.*

**RESPECTED FRIEND:** In making this my first annual report of affairs pertaining to Indian tribes within this agency, I will remark that the Great and Little Osages have been more particularly under my immediate care, and I deem it my duty to speak, not only of their present condition and prospects for the future, but refer to so much of their past history as specially relates to their condition at present.

The population of the Osages one year ago, as appears by the report of my predecessor, was 4,481. The enrollment made last spring showed their numbers to be 2,962, a decrease of 1,519 compared with last year. The census just completed showed the present population to be 3,150, an increase of 184 in six months. The first difference should not be understood as an actual decrease, but arises from a reduction of the enumeration to a correct standard. Physically, the Osages are strong in constitution; the men are large, and erect, the women strong and healthy, and the children bright and active; hence, under circumstances at all favorable to health, the tribe should show an annual increase at the latter rate.

About 250 of the tribe are mixed-bloods, who live by farming. They have comfortable cabins, and though surrounded by unfavorable influences, are, as a class, industrious and temperate. The others are divided into seven bands, each having their chiefs and councilors, and living in separate villages of lodges constructed of poles and inclosed with puncheons and buffalo hides, or long webs of matting made of flags. These bands have had extensive fields near their towns, which they planted in corn, beans, and pumpkins. These are cultivated mostly

by the women and children, with a heavy hoe, for a few weeks, when the whole go off to the plains, two or three hundred miles distant, to procure buffalo meat, which they dry in large quantities, and bring into their homes on ponies by the time their corn is in roasting ear. The corn is of a variety that matures early, and by the middle of the Tenth-month it is usually gathered, shelled, and packed in dry-hide sacks, and stored with dried pumpkins and beans in pole-cribs, chinked and daubed with mud, and roofed with bark and skins. They now depart on the fall and winter hunt, and remain on the plains most of the winter. If the hunt is successful, a large amount of jerked buffalo meat and tallow, robes, and furs are brought in. Then, in early spring, the crop is planted, and another year of hard work and exposure is repeated. The manual labor thus performed, if properly directed in agricultural pursuits, would soon place them in affluent circumstances.

The condition of the Osages upon their reservation the past year has been simply a continuance, in a more aggravated form, of that related by my predecessor in his monthly and annual reports to the Indian Department. In the spring of 1867 he asks for the assistance of the military to remove the settlers that have intruded on the Osage diminished reserve, and otherwise enforce the laws for the protection of the Indians. In the following Tenthmonth he states: "Their horses are constantly being driven off by the white men. One Osage lost 23 head in June, which were seen driven through Topeka. Another lost 20 head on the night of the 5th of September; they were seen going through Humboldt, and that was the last I could hear of them. Immigration is still crowding on their lands. They threaten me with Crawford's militia, and say they will hang me if I interfere with them. They seem determined to occupy the best of the Osage diminished reservation. By the time the Indians are in next spring all their camping grounds on the Verdigris River will be occupied by whites. This should not be allowed by the Government, and I cannot check this settlement without a small armed force."

I quote from succeeding reports to Sixthmonth, 1868: "The people on and near these lands are made to believe, by speeches delivered by so-called leading men and newspaper articles, that those Indians have no rights which should be respected by white men. They have had, to my certain knowledge, over 100 of their best horses stolen since the 1st of May last. I learn that scarcely a day passes that they do not lose from five to twenty horses. Marshal Dickenson followed 20 of these stolen horse over one hundred and fifty miles. The Indians dare not follow their stock five miles into the white settlements; and those thieves have always managed to baffle the officers sent in pursuit, and not one of them have as yet been brought to justice, or one in a hundred of the Indians, horses returned to them." In Thirdmonth following, he states: "Men are taking claims, building houses and mills on the diminished reserve, which disturbs the peace of the Indians very much." He again asks, later in the spring, for military assistance, to remove the settlers and enforce the laws, and adds: "If this is not done, there will be much trouble, and the Indians will be driven from their homes. The settlers are preparing to organize a county, entirely on the Indian lands, and they have applied to the governor of the State for protection. I can do nothing in the matter without instructions from the Government, which I will await with great anxiety." His next and last report, in Sixthmonth, 1869, says: "More than 500 families have settled on the eastern part of the Osage diminished reserve; have

built their cabins near the Indian camps, taken possession of their corn-fields, and forbidden them cutting fire-wood on their claims."

The 1st of Tenthmonth I assumed charge of the agency. The condition of affairs, so well presented by my predecessor, was unchanged, save that aggressions upon the Indians were more frequent and more aggravated. Increasing numbers had given boldness to the aggressors.

Having in view the practicability of the civilization of the Osages at an early day, I was disappointed at finding their surroundings so utterly unfavorable, and was forced to the conviction that no attempts could be successful until a separation of the Osages and whites was made by the Government. To preserve the peace and prevent the effusion of blood until that could be accomplished seemed the work for the time being. The settlers were generally associated in clubs, pledged to defend each other in the occupation of claims, without regard to the improvements, possession, or rights of the Indians. Many of the latter were turned out of their homes, and threatened with death if they persisted in claiming them. Others were made homeless by cunning and fraud. While absent on their winter hunt, cribs of corn, and other provisions, so hardly earned by their women's toil, were robbed. Their principal village was pillaged of a large amount of puncheons, and wagon-loads of matting hauled away and used by the settlers in building and finishing houses for themselves. Even new-made graves were plundered, with the view of finding treasures, which the Indians often bury with their dead. To my surprise the Indians listened to my advice, and submitted to these wrongs, while the settlers often quarreled among themselves over claims to which they had not a shadow of right, ending their disputes frequently with loss of life. The question will suggest itself, which of these peoples are the savages? Since my residence among the Osages, in no case within my knowledge has one of them attempted or threatened the life of his fellow. For all the unmitigated wrong and outrage heaped upon them, the only semblance of retaliation, and but few cases of that, has been the taking of horses without legal process, in lieu of those that had been stolen of them. These cases were made pretexts for further and greater outrages. Bands of armed men would seize and carry off a much greater number of horses than they ever claimed to have lost, and generally persons innocent of all complicity with the matter were the victims. That these wild Indians would submit to such treatment as this for years, without resorting to the scalping-knife, seems incredible, but such is the fact. These aggressions and wrongs were largely committed before any steps were taken for the purchase of the Osage reservation. In evidence of this fact, I again refer to the report of my predecessor.

I encouraged the Indians to plant, as usual, this spring. They replied that it was useless; that if I did place them in possession of their fields as I proposed, the herds of cattle and other stock of the settlers would destroy their growing crops, and as their ponies were being stolen in large numbers, they decided that to preserve the balance of their property, and peace with the Government, they would remove to the Indian Territory, permission to do so having been generously given by the Cherokees. Two small bands remained; at my urgent request planted, but their products have been mainly destroyed by the settlers' stock, as predicted. My efforts thus far have been fruitless to obtain damages for them. The eastern part of the reservation is now mostly surveyed and claimed in 160-acre lots, three counties duly organized, and elections held. One county has voted \$200,000 stock in a railroad; courts are held with all the ceremony of legal tribunals. The

press of Kansas teems with vivid descriptions of "town-sites," and the fertile valleys of the Osage country. Numbers have been thus led to believe that the lands were open to settlement. Some who came with their families and stock withdrew when undeceived. Such examples, however, of respect for the laws of the United States, and the rights of others, were lamentably few. The errors and mistakes of the past, if wisely used, may become profitable guides for the future. Had the Government, at an early stage of these violations of law and of the acknowledged rights of the Indians, which they themselves were not allowed to defend, extended the protection asked for by its officers, and that had been solemnly promised, a long list of depredations and outrages that will mantle the face of every true man with shame, would not now be on the record, and a higher standard of morality and justice would obtain certainly in all the border States. The neglect of the Government to assert the supremacy of law over a few border men, professional squatters, was regarded as a tacit approval of criminal acts by men professing to be just and honest; hence, this class perpetrated the same crime, claiming the right to do what was allowed by others. The attempted purchase of these lands by a railroad company was used as a justification for intruding. Others insisted that they had purchased their claims of Indians, knowing that no Indian could give a title, or even a privilege to settle here; and again, that they were kind and generous to the Indians; that they paid yearly a stipend to some chief, &c. Yet all these do not relieve these men from the reproach of being trespassers, intruders, and violators of the nation's law; and not one can show that he had a right in law or equity to occupy these lands before the treaty was approved by the Government, and a new home provided for the Indians.

While these efforts were being made to force the Indians from the country, their enemies in Congress were equally zealous to legalize the possession of their lands without reasonable or just compensation. This was prevented, however, by the passage of a bill on the 15th of Seventhmonth, which provided for the sale of the Osage diminished reserve, at \$1 25 per acre, the proceeds, after deducting the cost of survey, to be placed to the credit of the Indians at 5 per cent. interest. Thus did Congress make a just disposition of this vexed question, that has for years been a disturbing and corrupting element in the political and railroad organizations of Kansas.

The proposition referred to was laid before the Osages in council, and received their sanction on the 10th of Ninthmonth. Their removal will, no doubt, soon be effected to a suitable home in the Indian Territory, between the 96° of longitude and the Arkansas River. Several hundred professional squatters have anticipated this and taken "claims" on this new home, but from the noise made by office-seeking demagogues, I apprehend the troops sent by the Government to eject them are doing their duty. If the strong arm of the Government is not continually extended along the line of Kansas, the same unscrupulous, mercenary, and political elements that in the past have brought disgrace upon the State, by a cruel and unjust treatment of its Indian population, will deepen that disgrace by forcing an occupancy in the Indian Territory. That ground should be held sacredly as a shelter to the poor Indian from his rapacious enemies, and all the energies of philanthropy and benevolence be evoked to fit him to take his land in severalty, and become a citizen. God speed the day when the rights of the red men may be held in the public conscience sacred as those of white and black.

Right here, before noticing the present moral and physical condition of this people, I wish to remark that whatever strictures I have made or may make upon the white intruders upon Indian reservations are intended solely for that class. The terms squatter, settler, &c., are necessarily used, but it is by no means intended to include that grand army of pioneers who, respecting law and the rights of others have, with an industry, energy, and courage worthy of all commendation, made the wilderness to blossom as the rose; and the very fact that millions of fruitful acres in this country are inviting settlement and culture, with no violation of law or cruel violation of right, makes the act of intrusion upon the Indians still blacker in its character; in fact, the very wantonness of covetous and lawless natures.

At the recent council of the Osages, a handsome assortment of goods and subsistence were distributed, which, on account of their impoverished condition, were very acceptable, and a belief was renewed in their hearts that their loyalty to the Government during the war, and their forbearance toward the lawless white children of their Great Father, of late years were appreciated. The advance payment of their fall annuity, on this occasion, affords them much satisfaction.

After discussing the subject in grand council, they decided to associate the nation with the tribes of the Indian Territory, in forming a government for mutual protection and the promotion of the arts of civilization. They appointed delegates to attend a general council of said tribes, now in council at Ocmulgee. I learn with great satisfaction that the Osages, during their visit to the plains this summer, made peace with many tribes of wild Indians with whom they had been at enmity. This fact will doubtless enable them to be more successful in their fall and winter hunt, which, together with the disbursement at our disposal for their subsistence the coming year, will guarantee their substantial comfort during that period.

This tribe of Indians are richly endowed by nature, physically and morally. A finer-looking body of men, with more grace and dignity, or better intellectual development, could hardly be found on this globe. In judging of their moral character, some facts in their history must be remembered. They were once the most numerous and warlike nation on this continent, with a domain extending from the Gulf to the Missouri River, and from the Mississippi to the Rocky Mountains; but they have been shorn of their territory, piece by piece, until at last they have not a settled and unquestioned claim to a single foot of earth. Their numbers have been wasted by war and famine. This little remnant is all that remains of a heroic race that once held undisputed ownership over all this region. It is almost without precedent, yet strictly true, one great cause of their decline has been fidelity to their pledges. More than sixty years since they pledged themselves by treaty to perpetuate peace with the white man. That promise has been nobly kept—kept in spite of great and continual provocation. Individual white men have committed upon them almost every form of outrage and wrong, unchecked by the Government, and unpunished. Every aggressive movement of the whites tending to the absorption of their territory has ultimately been legalized. Thus, a kind of premium has been offered by the Government to enterprising scoundrels to ply their vocation at the expense of the Osages. The Government itself has been careless of its obligations, indifferent, it would seem, alike to its own honor and the security of the Indians. It has failed or neglected to afford them protection, and yet has allowed their persistent fidelity to truth to tie their arms and render them powerless to protect themselves. Patient sub-

mission for long years to all this neglect, and bad faith and outrage on the part of the whites and their Government, has brought upon them another and grave evil—the combined hostility of the wild tribes. These latter have always made the Osages' friendship for the whites a matter of reproach, and when they have met on the plains, as they do yearly, the savage Indian, rich in supplies, with flour and sugar, coffee and blankets, everything, in fact, essential to his comfort, all given him by a generous, forgiving, and paternal Government, would point in derision to the poverty and destitution of the Osages, who had none of these things, telling him that "that was the price of his submission and friendship to the whites—nakedness and starvation;" that he was a fool; they knew better how to obtain supplies—murder the males of some emigrant train, and take the women into captivity. Their Great Father would bring his agents to them with rich gifts and abundant supplies. If they were slow in coming, or insufficient in amount, make another and stronger appeal—desolate some frontier settlement. "It never fails." Although in the face of facts, it is hard to detect any fallacy in this reasoning of the savage. The Osage remained steadfast, until at last contempt and hatred took possession of the wild tribes thus banded together, and made war upon the Osages, stole their horses, drove them from their hunting-grounds, deprived them of their only means of subsistence, and entailed upon them suffering, starvation, and death in untold measure. Thus it will be seen that an exercise of the highest virtue, such as can hardly be paralleled in history, has placed this people between the upper and lower millstone. The process of grinding them to powder might almost be inferred a meritorious work from the indifference and apathy of many, and the exultation of some, who think themselves living in the light of Christian civilization. It would be strange indeed if there was not in their minds a profound distrust of the Government. At the payment of their annuities last spring, when a proposition was made to buy their lands, one of their head-men asked: "Why is it that our Great Father can never even send us our annuities, without asking us to sell and move once more?" and added, with the look and tone of a man without hope, "We are tired of all this." By the treaty signed on the 10th ultimo by the Osages, the nation assumes a special guardianship over this tribe. This fact, and others connected with their history, should guarantee to them peaceful, undisturbed possession of their new home so long as they may wish to maintain a tribal organization. Satisfy their minds, let them rest upon the conviction that such will be the case, and the work of civilization is half done; and the present time seems unusually propitious for the completion of that work. Just now being removed to their new home, they realize in an unusual degree their condition of dependence. Many of their head-men have signified to me their desire to abandon their nomadic life and customs, and adopt those of the white man. They have also promised to discourage the practice of polygamy. One of their chiefs said to me: "Our greatest trouble with the young people arises from the wrong system of marriage practiced among us, and I long for the day when we shall adopt the white man's laws." The desire is frequently expressed to possess the comforts of civilization, such as a house, cook-stove, tables, chairs, &c. This desire will become general when they learn that such things are really within their reach. A practical realization of the difference between life in a wigwam and that around the comfortable fire-side of a home, would do much to accelerate the work of regeneration. In a word, the minds of these Indians seem to be in an unusually receptive condition, and everything favorable to the success of the experi-

ment now being made. Success, however, is contingent upon the wise and faithful use of the means at command. One of the most important instrumentalities will be the school. To make the school successful with the Indians it must be general, and so conducted, if possible, as to make it a part of the every-day life of the tribe. The Osages, and perhaps other Indians, have strong affections for their children, and however anxious they may be to have them educated, are averse to sending them away for that purpose, on account of the separation; and, besides, so small a number can avail themselves of mission and boarding schools, as illustrated in the Osage mission, that their influence is not felt by the tribe on their return; so that, instead of diffusing habits of thought and life, acquired during their education, they themselves are swallowed up, and lapse at once into the manners and customs of the great majority. I am already convinced that the great work of education cannot be successful under the exclusive control of any sect or denomination, if any interests in personal or real estate are involved. The Osages are properly jealous of societies in that regard. The common school-system, the great bulwark of civilization, can be best applied here, of course subject to such modifications as may be necessary. After all, the effort to transmute the Indian into a homogeneous element of strength in the population of this country will depend for its success mainly upon two things: they must be protected from the vices and encroachments of border white men, and the representatives of the Government and of philanthropy among them should be men and women familiar with Indian character, in full sympathy with their needs, and possessed of energy, industry, and the highest moral character. This applies alike to agent, farmer, mechanic, physician, teacher, and trader. Some Malthus may inquire: "What will all this cost?" I answer, compare its cost, to say nothing of results, with another policy that has long been tried in this country, and the success of which is known to all.

In conclusion, I am glad to express the hope that, with the appropriations to be used wholly or in part for the benefit of this hitherto destitute tribe, and with the blessing of a kind Providence, much good may be accomplished, and that one year hence I can make of them a much more flattering report.

Very respectfully,

ISAAC T. GIBSON,  
*United States Indian Agent.*

ENOCH HOAG,  
*Superintendent Indian Affairs.*

---

No. 73.

NEOSHO AGENCY, INDIAN TERRITORY,  
*Parker Post-Office, Kansas, Tenthmonth 1, 1871.*

ESTEEMED FRIEND: As the Quapaws, and other small bands heretofore connected with this agency, have been formed into a separate one, this report will refer alone to the Osages, who are now the only tribe in my charge. At their general council in Ninthmonth, 1870, they accepted the "Congress bill," by which all their lands were conveyed to the Government in trust. They also appointed a delegation to select a suitable tract of land in the Indian Territory for a new home. The greater portion of the tribe then went to the plains on their fall and winter hunt.

On the 26th of Tenthmonth, their principal chiefs formally selected a tract of country, which the tribe had frequently occupied temporarily, and had for years regarded as their future home. A special survey, however, made by advice of the commissioners, and the urgent request of the Osages, proved this selection to be partly east of the ninety-sixth meridian. The Cherokee government refusing to sell any land east of that line, the Osages reluctantly accepted a tract lying west of and contiguous to it, and extending from the south line of Kansas to the north line of the Creek country. This selection was approved by the Department, and the President fixed the price at 50 cents per acre, the two parties in interest having failed to agree upon the price. The tract contains 560,000 acres, being 160 acres for each member of the tribe. A large proportion of it, however, is broken, rocky, sterile, and utterly unfit for cultivation; and the best portions of the remaining were already occupied, and some improvements made, by about 150 families of Cherokees, Delawares, and Shawnees. These occupants believed that they were living east of ninety-six. The ground of their belief will be found in the following extract from a message of their chief to the Cherokee council, delivered Eleventhmonth 19, 1870:

\* \* \* \* It appears the Osages have selected the country on the Cana, or Little Verdigris, and Bird Creek, containing the best lands in the Cherokee Nation. A line purporting to be the meridian line of the 96° west longitude has been run without the official knowledge of the Cherokee authorities—a line that is in notorious variance with the official maps furnished this nation by the Indian Department, and every map known to exist. By this surreptitious survey many of our citizens are thrown west of the 96°, and their valuable farms and improvements are within the country assigned to and claimed by the Osages. You will therefore take such action as will secure a remedy, if possible.

The settlers were impatient for full possession of their country in Kansas, and, having confidence in the correctness of the survey of the 96°, I advised the early removal of the tribe. Some of the Cherokees sold their improvements to the mixed-blood Osages, but the majority protested against our occupation. These facts were reported to the Department, and a survey in a manner that could not be objectionable to the Cherokee government, and the removal of the remainder of the Cherokee settlers, was urgently requested. Congress promptly appropriated \$5,000 for determining the location, and marking with suitable monuments this line.

Desiring to commence the work of civilization at once, in early spring I had a saw-mill erected; purchased oxen, and wagons, and farming implements, and endeavored to make all the necessary arrangements for the erection of school-houses and other agency buildings during the summer. A few temporary buildings for immediate use were erected, from material made by the saw-mill, though the laborers had frequently to abandon their work to avoid a conflict with their Cherokee friends, who resisted the necessary appropriation of timber.

The Osages mostly returned from their hunt about the middle of Thirdmonth, much disappointed at the unsettled condition of their affairs. I assured them the 96° would be located without further delay. I felt authorized to make this promise, for the honorable Commissioner at Washington, from whence I had just returned, gave me an unqualified promise that the survey should be made at once. Some weeks elapsed, and the chiefs protested against further improvements being made. When the planting season arrived they would not permit me to plow them fields of corn, nor their women to plant patches, because the line had not yet been run.

It must be borne in mind that their tillable land consists, mainly, of

a narrow strip adjoining the line in dispute, and if the official survey proves the Cherokees to be right, the land thus assigned to the Osages would be quickly abandoned by them, as I believe they would not accept it as a *gift* for a future home. I had before this suspended improvements except to get out fencing to inclose 50 acres of sod corn planted for the use of the Osages; but the appropriation of material was resisted until the Cherokee stock had destroyed the crop.

At this writing, the Osages have again mostly returned from the plains. If they had not been taught by years of experience that there was little faith due to the promises of their agents, they would be unable to restrain their indignation, for the survey has not *yet* been made, nor can I give them any reason why it has not been done.

When the Congress bill was offered to the Osages last fall, the mixed bloods of the tribe opposed its acceptance, on the ground that many of them had improved "claims," which they feared would be immediately "jumped" by the settlers. To remove this opposition, a large mass-meeting of the settlers was held at the council, at which strong resolutions were passed, with great unanimity, promising protection to all Osages having claims, and guaranteeing an opportunity to enter and enjoy their homes, or sell them, as they might elect. A strong committee was appointed to see that these resolutions were faithfully executed. Relying upon all this, the mixed bloods withdrew their opposition, and the bill was accepted. Nineteen of these half-breeds filed their intentions with the proper court of becoming citizens, desiring to remain on their farms and claims, and enter them. But their claims were soon occupied by white settlers, and a series of outrages and persecutions perpetrated upon them that shames humanity. All except eight have abandoned their homes, or taken what they could get for them. Some of their houses were burnt by mobs of white men; one half-breed died from injuries received and exposure on such an occasion. These murderers were arrested, went through the forms of a trial, and were discharged. The eight still remaining will probably lose their land, as they have not the means to engage in a long contest at law; and if the past is an earnest of the future, they can hardly hope that an Indian's rights will be protected in a Kansas court.

Last fall the military removed a number of white settlers who had intruded on the lands of the Indian Territory bordering on Kansas. Most of them returned promptly when the soldiers had left. Early this spring I asked for the removal of nearly one hundred families from the Osage lands; then applied to the officers in command at Fort Gibson, then at Fort Scott, but the necessary assistance could not be obtained. Immigration has continued to pour in even more rapidly than it would on lands that it was lawful to occupy. My unaided efforts to remove them and prevent immigration have been futile. The Osages feel that their new home is being wrested from them even before they have got possession.

Last spring a gang of seventeen border men made an unprovoked, murderous assault upon ten unarmed Osages, killing one and severely wounding others, and robbing them of several ponies, blankets, and robes. I applied at once for assistance to arrest the guilty parties. That request was responded to a few days since. On preliminary examination, three of the party were placed under bonds of \$250 to appear at some future time. This is a gratifying evidence that the life of an Indian is regarded as of *some* value.

Owing to causes, some of which have been referred to, such as proximity to border settlements, the presence of intruders, the under-

mined lines of jurisdiction, and the mixed population, violations of law are frequent and flagrant—more especially in the introduction of whisky, with its endless train of evils; and, with all this, an utter want of judicial machinery to arrest or punish evil-doers. If an arrest is now made, the offender and witnesses must be taken nearly 300 miles for an examination. Anticipating these troubles at the time of our removal, I then asked for the appointment of a United States commissioner and deputy marshal for this locality; later, for a police force of ten soldiers; and, last, for permission to equip and use twenty Osages to enable me to preserve order and enforce the intercourse laws. To none of these have I received advice or response. I now entreat those whose duty it is to establish the boundaries of this reservation, and to remove trespassers therefrom, and to provide for the enforcement of the laws in the Indian country, not to neglect longer the sacred obligations the Government owes to these Osages.

The work of the year has been mainly the removal of the Osages to their present location without expense for transportation; issuing subsistence to about 500 of the tribe during the winter and spring; erection of a saw-mill; sawing over 150,000 feet of lumber; erection and repairs of buildings for the Osages, and temporary ones for agency purposes; inclosing with a good plank fence 100 acres of prairie land, one-half of which is now being sown in wheat; breaking 350 acres of prairie, and making about 1,000 tons of hay. This labor was performed almost wholly by numbers of the tribe, and largely by unlettered blanket Osages. This class of labor was used during the last month's run of the saw-mill, with the best results. They also made the greater part of the hay, laboring continuously from day to day, improving in skill. They also learned quite readily to hold the plow and drive the oxen. Not one has been discharged for idleness or disobedience. They are quite emulous, and certainly possess all the elements of character necessary, if kindly and carefully developed, to make them a community of industrious and enterprising citizens. Scores of them are importunate for houses and furniture, even under present discouragements; of course these cannot be gratified until they have a settled home. I designed having at least three schools during the summer, but owing to our suspension one house only was erected for that use, in which a school of 37 pupils have been taught for four months with a success that confirms the opinion that the common school is better than any other system for educating the tribe. About 60 pupils have been in attendance the past year at the Catholic mission school, Kansas.

A good physician has also been employed, who has succeeded well in restoring health, and introduced favorably our system of medicine among the blanket Indians, who have heretofore avoided the white man's medicine. The smith-shop has been in operation about six months, and is well patronized.

Nothing is wanting but reasonable attention to the needs of the Osages from the proper authorities, to render their civilization an easy and pleasurable success. But these long and inexplicable delays, which they attribute to neglect, do aggravate and dishearten; and while such feelings prevail their wild natures are insubordinate, and good impressions cannot be retained.

Very respectfully,

ISAAC T. GIBSON,  
*United States Indian Agent.*

ENOCH HOAG,  
*Superintendent Indian Affairs.*

## No. 74.

SAC AND FOX AGENCY, INDIAN TERRITORY,  
*Eighthmonth 22, 1871.*

In obedience to the requirements of the Indian Department, I submit the following as my first annual report of the condition of Indians under my charge:

The Sacs and Foxes now on this reservation number, males, 220; females, 228—total, 448. The chief and his band who refused to come with the main tribe when they removed to this Territory are still in Kansas, except a few small detachments who have at various times joined those now here.

Those who settled here first have appeared pretty well satisfied until within a few days. The present cause of dissatisfaction is the running of the line between them and the Creeks. When they came to these lands they supposed that the dividing-line had been permanently established, and many of them fixed their homes near the east line of the reservation, and have made some improvements by way of fencing, building, &c. The present survey will place such entirely outside of their reservation, compelling them to move and abandon all their improvements.

The advancement of these tribes toward civilization has not been as rapid as would be desirable, yet I think I may safely report some progress in that direction—some more inclination from year to year to enlarge their fields, get more stock around them, build more permanent houses, abandon their nomadic life, and settle down to steadier habits and agricultural pursuits. I would most respectfully recommend that the permanent boundaries to their lands may be fixed soon as possible, so that all who may be disposed to establish themselves in permanent homes can do so without fear of being disturbed. Until that is done they will be likely to remain in an unsettled and unsatisfactory condition.

The number of acres of corn planted by Indians themselves this year will exceed that of last by at least one-half, yet there will not be near so much corn raised the present season. Owing to the extreme drought which prevailed for over three months, I will have to report a large portion of the crop nearly if not quite a failure. As their corn and annuity are their main reliance, it seems almost certain that unless assistance is rendered, there must be more or less actual suffering before another crop can be raised. I am furnishing work at remunerative prices to all who are willing or can be induced to labor, thereby placing within their reach a means by which they can help themselves to some extent; but there are a number of old and infirm ones who are not able to avail themselves of that means, and will require assistance from some other source.

Since Agent Miller's report of last year, there has been inclosed one field of 20 acres adjoining the agency, which is now being cultivated in corn; one of 300 acres, for pasture; and another of 100 acres, a part of which is being cultivated in corn for use of work-oxen. There has also been a good saw-mill erected and in operation for more than a month, to which is attached a pair of burrs for grinding corn, and a shingle-machine, which are found of great service here.

Some of the buildings provided for by treaty have been commenced, and will be carried forward as rapidly as possible. There has not been any school in operation among these tribes since their removal to this Territory, owing to their scattered condition and lack of suitable build-

ings for such purpose. I have selected a site for the mission-school building, and am now having a well sunk, and, as soon as a sufficiency of water is obtained, expect to commence the erection of said building, hoping to get it in readiness for school during the winter or early spring.

The following comprises a list of stock owned by Sacs and Foxes, and approximate value of same:

|                                  |          |
|----------------------------------|----------|
| Horses, 762, at \$25 each.....   | \$19,050 |
| Cattle, 116, at \$12 each.....   | 1,392    |
| Work-oxen, 12, at \$30 each..... | 360      |
| Hogs, 229, at \$3 each.....      | 687      |

#### ABSENTEE SHAWNEES,

attached to this agency, numbered, on the first of this month, males, 304; females, 246—total, 650. They have since had their numbers somewhat increased by accessions from Kansas. They appear to be industrious, and are recovering from the effects of the late war as fast as could be expected. It will be remembered that these people located on the lands which they now occupy more than thirty years ago; and with little or no aid from Government, made themselves homes and were living quite comfortably at the outbreak of the rebellion. Most of them were cultivating more or less land, and numbers had large amounts of stock. But as they remained loyal, they had to abandon their homes and seek shelter in the North. On their return, after the close of the war, they found their fields laid waste, and their stock driven off and destroyed. But it will be seen from the statistical report accompanying this that they have not been entirely idle since their return.

Owing to the long-continued drought, their crops fall far short of what they would have been under favorable circumstances. There is one thing which is operating unfavorably with them, and retarding their progress at present; that is, a feeling of insecurity in regard to their title to the lands which they now occupy. They having been granted to another tribe, fears are entertained that they will have to abandon their improvements, and seek homes somewhere else. As they are all living in log-houses, with more or less land in cultivation around them, it would subject them to much loss and inconvenience. I would most respectfully recommend that, if possible, the lands which they now occupy be secured to them in such a manner that they cannot be dispossessed of them, so that they may go on making improvements without fear of having to abandon them. If this is done, they do not seem likely to need any further aid from Government, except in establishing and carrying on schools for a year or two. These they are very anxious to have in operation as soon as practicable.

The following will show the result of their farming operations for the past year, amount of stock, &c.:

|                                                       |          |
|-------------------------------------------------------|----------|
| Horses, 643, at \$25 each.....                        | \$16,075 |
| Cattle, 792, at \$12 each.....                        | 9,504    |
| Hogs, 1,427, at \$3 each.....                         | 4,281    |
| Corn, 6,000 bushels, at 75 cents per bushel.....      | 4,500    |
| Sweet potatoes, 1,116 bushels, at \$1 per bushel..... | 1,116    |

As the crops had not been gathered, we could only approximate the amount, but think we have not placed it too high.

Very respectfully,

JOHN HADLEY,  
*United States Indian Agent.*

E. HOAG,  
*Superintendent Indian Affairs.*

## No. 75.

KAW INDIAN AGENCY,  
Ninthmonth 14, 1871.

ENOCH HOAG, *Superintendent Indian Affairs* :

I submit the following report of the Kansas Indians the past year.

They, as usual, spent a large portion of last winter in the buffalo country, but, owing to the severity of the winter, were not as successful as usual, and lost by cold and hunger about fifty head of ponies, but brought home what meat and robes the balance could carry.

By order of the Indian Department I accompanied a delegation of the head-men, late in the fall, to the Indian Territory, to select a future home for them. We made a selection adjoining the State of Kansas, commencing where the 96° of west longitude crosses the south line of the State of Kansas, and running south along said meridian to the junction of the Big and Little Canas; thence west parallel with Kansas State line for quantity. The Indians were well pleased with the country, and could easily be induced to remove thither. That land has since been included in the selection made by the Osages, on hearing which the Kaws wished me to inform the Indian Department they were not willing to sell their lands here unless they could get that. I think it will be difficult to obtain their consent to remove farther into the Indian Territory.

Owing to the loss of ponies last winter the Indians did not plant quite as large a breadth of land as usual, but the season has been much better than last year, and they have been rewarded with a bountiful crop of corn and vegetables, which the accompanying statistics of farming will show.

The school has been kept up with but little intermission the past year; the progress of the scholars has been very satisfactory, but it is still difficult to keep them in school a sufficient length of time to acquire a good English education. Yet, there is an increased interest, as manifested by the number of girls in attendance. (See statistical report of education herewith.)

The ill health of the matron was such that it became necessary to change superintendents, and Uriah Spray and wife have contracted to keep up the school on the same terms as their predecessors. We hope, by giving the children a pleasant home, to increase the number of scholars the coming year.

The pension money allowed individuals of the tribe the past year has been distributed among the Indians and kept them in comfortable circumstances.

The sale of a large portion of their lands, which is now being effected, will, if the funds are properly used, furnish them with a good supply of stock and agricultural implements, and thus enable them, in a short time, to become self-supporting.

The most valuable portion of their lands yet remain unsold, including all of their improvements. Said lands should bring the Indians (including improvements) an average of \$10 per acre. I would recommend that they be sold at an early day and the funds invested in Government bonds, and the Indians removed to a new and permanent home in the Indian Territory.

The health of the tribe has been very poor the past summer, and a number of deaths have occurred both among adults and children. I

earnestly recommend that a physician be employed, at a stipulated salary, to reside with the tribe.

Respectfully submitted,

MAHLON STUBBS,  
*United States Indian Agent.*

---

No. 76.

POTTAWATOMIE AGENCY, *Ninthmonth 1, 1871.*

It becomes my duty to submit the following report of affairs within the Pottawatomie agency for the year 1871:

Many of the Pottawatomies have, by the terms of the treaty of February 27, 1867, become citizens of the United States and received patents for their lands and their proportionate share of the tribal funds held in trust for them by the Government. In the tenth month, 1870, 656, and in the fifth month, 1871, 250 more of these Pottawatomies, in all 906, availed themselves of the provisions of said treaty, and have received their proportionate share of said funds, and have realized the results arising therefrom, which are as follows, viz: many of them have proved themselves good citizens and have turned their attention to the tilling of the soil and the raising of improved stock, and have thereby secured for themselves an independence. They have large, fine stone and frame buildings for residences, barns, and granaries, and also some of the best fences around their fields to be found upon the original Pottawatomie reservation in Kansas. Many of these are men of moral influence in church and State. I regret to say that this is not the case with quite a large number of those who have thrown off their tribal relations. These now declare their act in becoming citizens to have been a premature one; they in their sober moments say that they were intoxicated with the idea of becoming citizens of the United States and exercising the right of franchise. They have squandered their land and money in gambling, drinking whisky, and other evil habits, and are now thrown upon their own resources as poor as the poorest. These Indians last mentioned have stated their intention of going south upon the reservation set off to them by order of the Secretary of the Interior, dated November 15, 1870, as soon as they can be satisfied by the Government that they will be secure in settling upon the reservation set apart to them, they having received some notice, either officially or otherwise, I know not how, from the Indian Office at Washington, D. C., that they, being citizens of the United States, could not have any interest in said reservation under the treaty between the Government of the United States and the Creek Nation of Indians; which treaty provides that this land, bought by the Government of the United States from the Creeks, should never be sold to any but Indians. Now, in my opinion, it is necessary to give them some assurances that if they go and settle on that land they will enjoy the use and possession of it. This land should be surveyed as soon as practicable, so they may know the metes and bounds of said reservation. These Indians are looking forward with anxiety to see this question settled, as their only hope of future maintenance depends upon it.

The tribe of Pottawatomie Indians, under the control of an agent, is thus reduced to that portion residing upon the diminished reserve in Kansas, numbering, as near as can be ascertained, about 415 souls, known as the Prairie band, and living in a manner as set forth in my

report of 1870. Many of them have been induced to make additions to their fields and houses. The season having been a great deal more favorable than last year, and the additions to their fields having increased their crops to some considerable extent, they are in a better condition to meet the coming winter than any winter heretofore. By the inducement held out to them by the superintendent, Fifthmonth last, in giving them \$300 out of the fund for the civilization of Indians, provided they would set apart the same amount out of their surplus funds for the purpose of purchasing farming implements for the tribe, and after consulting a day or two, they set apart \$600 for the purpose aforesaid, making in all \$900, which was laid out for farming implements for the tribe, which appears in second quarterly report of the year 1871, less freights and contingent expenses.

There being more ground in cultivation and also a better yield than last year, the statistics will be, as near as can be ascertained, as follows, viz :

|                                                                               |                    |
|-------------------------------------------------------------------------------|--------------------|
| Corn, 200 acres, 30 bushels per acre, 6,000 bushels, at 30 cents per bushel . | \$1,800 00         |
| Potatoes, 1,000 bushels, at 30 cents per bushel.....                          | 300 00             |
| Horses, mules and ponies, 350 head, at \$30 .....                             | 10,500 00          |
| Cattle, 150 head, at \$19.....                                                | 2,850 00           |
| Hogs, 175 head, at \$3.....                                                   | 525 00             |
| Sheep, 15 head, at \$1.....                                                   | 15 00              |
| Wagons, 24, at \$50.....                                                      | 1,200 00           |
| Breaking-plows, 5, at \$30 .....                                              | 150 00             |
| Harness, 50 set, at \$15.....                                                 | 750 00             |
| Mowers, drills, and other agricultural implements not specified above.....    | 600 00             |
| Total value of personal property.....                                         | <u>\$18,690 00</u> |

The pupils that have heretofore attended Saint Mary's school having become citizens of the United States under the aforesaid treaty, and having thereby disconnected themselves from the tribe, are no longer entitled to the benefits of the educational fund.

I therefore feel highly gratified with the present prospect of opening up a school and agency farm, as suggested in my report of 1870, on the diminished reserve, of which a portion has already been broken for said purposes; and I hope to erect the school and other buildings thereon in time to be ready for occupancy in the autumn of this year.

J. H. MORRIS,

*United States Indian Agent.*

ENOCH HOAG,

*Superintendent of Indian Affairs, Lawrence, Kansas.*

#### No. 77.

SHAWNEE INDIAN AGENCY,  
Olathe, Kansas, Ninthmonth 16, 1871.

Notwithstanding the Shawnee tribe of Indians have nearly all removed from this part of the country, to secure homes upon lands of the Cherokees, yet this does not materially lessen my services on their behalf, as many of them have left their lands here unsold, either rented, leased, or in the market, to be looked after and guarded from spoliation by trespassers.

Since making my last annual report a material change has taken place with the Shawnees, many of whom continued undecided in regard

to the propriety of embracing the provision made for them with the Cherokees until the closing period approached, when they, with one or two exceptions, removed to join their brethren, the newly adopted Cherokees.

In tracing the history of this interesting tribe, the Shawnees, we find that about forty years have elapsed since they were almost forced to relinquish (to them) an interesting home at Wahpahkonneta, Ohio, and suffer the privations of a new and untried home on the southern banks of the Kansas River. Here they passed through many hardships, their number materially diminishing from various causes, and with reluctance now they again leave the graves of their fathers and friends, and some of them well-cultivated farms, with comfortable and attractive residences, to undergo the fatigue and hardships of a new country.

The acclimating in the Territory has proved severe on a part, especially the aged and infirm, a number of whom have already sunk under it, and are now no more.

In conducting the business of this agency the greatest annoyance has been the intemperate habits of some of the Shawnees, even some of the brightest and most intelligent of the tribe, females excepted. I used every effort in my power to obtain testimony against the liquor-seller, but could not succeed, until at last S. Bluejacket, an educated and intelligent Shawnee, was confined in the Olathe prison for intoxication, with a fine of some \$12 resting against him, and no money to pay it, to be served out or diminish at the rate of about 50 cents per day. Hearing of the occurrence I visited him in the prison, and proposed paying his fine and setting him at liberty by his signing a contract to give evidence against the liquor-sellers when called on, which was readily assented to; and other Shawnees then concluded to give evidence, also, thus opening the way for the prosecution of several liquor-dealers before the United States district court. And when those Shawnee witnesses were examined before the grand jury of said court, a number of other similar cases of selling liquor to Indians were brought to view, in various parts of the reservation, who have mostly, or all, I trust, suffered the penalty due to such crime.

Within the past year two cases of prosecution of Shawnee widows were commenced before the district court of Johnson County, Kansas, for merchandise, or store accounts, amounting, in the aggregate, to upward of \$1,500, part of which accounts were not acknowledged to be owing. In one case judgment was rendered, with costs of suit. When apprised of these cases I notified Superintendent Hoag, who advised a move for arrest of judgment in the one case, "and that an effort be made to have them submitted to the inspection of the agent, and if found to be just, it becomes the duty of the debtor and agent to procure the payment, so far as means are in hand to do it." The plaintiff was accordingly notified that by withdrawing the suits, paying the costs accruing in these cases, and submitting them to the agent for inspection, the amount found to be justly due, the Shawnees would be encouraged to settle, which was acceded to, and the accounts, impartially examined in presence of plaintiff and debtors, were reduced to a very little over one-half the demand, and agreed to be settled accordingly.

That portion of the Shawnee tribe called Black Bob, becoming disheartened at the Government movements in relation to the disposition of their lands here, have emigrated south and southwest, and are reported to be scattered, and staying with various peaceable tribes on the borders of Indian Territory.

The lands allotted to those Indians are yet in the hands of white settlers, who claim the pre-emption right by occupancy, and still keep an attorney laboring at the head of the Indian Department, as also in Congress, hoping to influence those bodies in favor of the settlers or trespassers upon the lands in question, to violate the treaty stipulations with those Indians. Can it be possible that such influence, by purchase or otherwise, will ever be brought to bear thus to deprive the weak of their just rights? Will the strong arm of this great nation be permitted to swerve from a sense of justice, and thus violate the pledge made for the protection of the red man? Why procrastinate? Why defer the settlement of this question, and not give the Indian his just right—that right that was guaranteed in the treaty of 1854, permitting the Indian of that band who chose to make selections and have land patented to him, as provided in said treaty, and permit him to realize the benefits of his own proper possession?

Can an appeal be made to that honorable body, the legislature of this nation, to consider this matter, and permit the Indian Department again to authorize the opening of the sales of the Black Bob lands?

I have made some visits to the Shawnees, at their new homes in the Indian Territory, and feel much gratified in finding them sober and industrious, and bid fair to be self-sustaining. Some of them are yet remote from schools, which may be needful to be looked after at an early day.

## MIAMIES.

Very little change has taken place within the past year with the Western Miamies. They still mostly remain at their homes in Miami and Lynn Counties, Kansas. A few have emigrated and settled with the confederated band of Peorias, Weas, &c. Their lands are yet mostly occupied by white settlers who seem reluctant to recognize the Indian's right, but measures are now in progress, by which it is hoped this perplexing difficulty will be settled at an early day, and these lands restored to the rightful owner.

Respectfully submitted by

REUBEN L. ROBERTS,  
*United States Indian Agent.*

ENOCH HOAG,  
*Superintendent of Indian Affairs, Lawrence, Kansas.*

## No. 78.

QUAPAW SPECIAL AGENCY, INDIAN TERRITORY,  
October 4, 1871.

SIR: Since making my last annual report the Neosho agency has been divided, and the Quapaw special agency created. This report may be properly styled the first annual report of the new agency.

The tribes officially within this agency are, the Senecas, Eastern Shawnees, Quapaws, Confederated Peorias, Kaskaskias, Piankeshaws and Weas, and Ottawas of Blanchard's Fork and Roche de Bœuf. The Wyandotts are now a tribe, having recently completed a reorganization of the tribe in accordance with the instructions of the honorable Secretary of the Interior, received through your office. They have not been officially assigned to this agency.

The citizen class of Wyandotts who came to this country with the Indian class are still here. They have been officially informed that, under the decision of the honorable Secretary of the Interior, they could not be protected either in person or property while in the Indian country. The final disposition of this class is a question of some importance. Some of them have been in this country for five or six years, and have opened farms and made other substantial improvements. The treaty of 1867 provides, however, that when one of this class presents himself to the tribe, with an agent's certificate in his hand certifying "that such party is, through poverty or incapacity, unfit to continue in the exercise of the responsibilities of citizenship of the United States, and likely to become a public charge," the tribe may admit him to membership. I would advise prompt action on the part of the Indian Department in reference to this class of Wyandotts. For further information in regard to the Wyandotts, see statistical tables.

The Confederated Peorias, &c., are in good condition, and have made considerable improvements in the size of their farms during the year. They have had a good school for the greater part of the past year. Their chief, Baptist Peoria, is untiring in his efforts to advance the interests of his people.

Some of the Miami tribe of Indians are living on the Peoria reserve, expecting the remainder of the tribe in Kansas to follow them as soon as the unsettled business of the tribe can be arranged. Every aid should be given to the Miami tribe to enable them to move down at an early day.

The Peorias, &c., have also a large party of Delaware Indians living on their reserve. They have for some reason become dissatisfied, and have left their homes in the Cherokee Nation. Hoping that the Government would allow them to remain, they have done considerable work on the lands now occupied by them.

The Ottawa Indians are doing well in this country; they are making fine improvements; they have been disturbed to some extent in their work by the unsettled state of their business in Kansas, requiring the frequent absence from home of their chief and head-men. The Ottawas have an excellent school; friend A. C. Tuttle and wife have charge of it; many of the children board in the family of friend Tuttle. I hope a full report of the school may be had in time for publication.

The Quapaws have made but little advance during the year. They have taken steps, recently, toward the establishment of a mission-school in connection with the Confederated Peorias, &c., which will be completed during the coming year.

The Eastern Shawnees have but few able-bodied men among them; they have done well during the year. Many acres have been added to their farms; they are in good condition; they have consented to send their children to a mission-school, which is to be built on the Wyandott reserve, for the accommodation of the Wyandott, Seneca, and Shawnee children; this school will be dependent upon a generous public for support, for the tribes for which it is intended are poor and have no school-fund.

The Seneca tribe living in the most southern part of the agency have, I think, the best reserve for farming purposes; they are good farmers, and will have a surplus of farm products this year.

Considerable anxiety is felt by Indians for the future of the Indian Territory, with the view of keeping it closed against white settlers. All of the tribes of this agency have adopted the Ocmulgee constitution.

The accompanying statistical tables, together with this brief report, are most respectfully submitted.

GEO. MITCHELL,  
*Late United States Special Agent.*

ENOCH HOAG, Esq.,  
*Superintendent Indian Affairs.*

---

No. 79.

*Peoria Indian School Report.*

PEORIA RESERVE, *Sixthmonth* 30, 1871.

*To Agent George Mitchell :*

The Peoria school is conducted similarly to a common district-school, and has been in operation eight months.

When opened the larger portion of children could not speak English and had but a faint idea what school meant. They have proved very tractable and those that attend regularly learn fast. One class of seven, commencing with letters, have read through Wilson's Second Reader. One class of five are in Third Reader.

I have insisted on their learning but a little at a time and that little well; have used very little force, but governed more by moral suasion; have started an arithmetic class, and some are ready for geography. They take great pride in writing on the slate. The daily average is small, about 14, with 26 names on the roll.

In intellectual capacity my scholars are not below the average in white schools.

I am, respectfully,

JOHN COLLINS ISAAC,  
*Teacher Peoria School.*

---

No. 80.

*Ottawa Mission school.*

**ESTEEMED FRIEND:** In accordance with instructions we herewith submit our second annual report of the condition of the Ottawa Mission school under our charge. We are happy to inform you that the progress and development of the pupils in every particular have been good, and that we have received the hearty co-operation of the chief and his council on all subjects of moral, religious, and intellectual acquirements; but, unhappily, their school-fund having been placed beyond their control has rendered them unable to do what they otherwise would be glad to in this direction; hence we have found it needful to call upon Government to assist us in providing for a large family of destitute orphans whom we have had under our care during the past year. These children came to us seeking admittance; we could do no less than offer them the hospitalities of our humble home, and believe that it has proved a blessing to us and to them. During the spring months our tribe was very much afflicted with measles of a fatal character. Five of the grown scholars were victims of this mortality; one of them was a member of our family; she was a girl of much promise, developed rapidly, and was

very affectionate in her disposition, embraced the Christian religion and died triumphant in the faith, and, just before her happy release, was permitted to see the angels beckoning her to a better and higher life, and we have the comforting assurance that she is now basking in the sunshine of immortal blessedness. The girls have one hour set apart each day for sewing, during which time they are instructed in this direction; they have pieced about 25 quilts, and are now quilting them preparatory for winter. The orphan children are daily instructed in different branches of industry which will prepare them for future usefulness. The whole number of names enrolled has been 56, boys 26, girls 30, with an average attendance of 25. Number of weeks taught, 44; branches taught, orthography, reading, writing, mental and practical arithmetic; also considerable attention given to object-teaching and general information. All of the instructions are given in the English language, which they generally acquire with ease and rapidity. Our Philadelphia friends have very kindly furnished us from time to time with large quantities of books, clothing, and other comforts of life, which have aided us much in our work, and thus placed us in a condition where we have been enabled to clothe our children comfortably and keep them in school when health and other surrounding circumstances would admit of it. Through the appropriation made by Congress to the central superintendency we have been enabled to erect comfortable buildings for our family and have repaired the school-house, all of which adds much to our comfort and the good of the cause. The people of our charge have made some very efficient laws in relation to moral reform, much to our admiration and encouragement. We also have an interesting Sabbath-school, in good working order, which is largely attended by children and adults; this is followed by religious meetings, in which we often feel the Divine blessing so abundantly spread over us that we realize, of a truth, that God hath made of one blood all nations of men, and that all are alike precious in His sight. During these seasons of devotion the songs of Zion are loudly sung and the voice of prayer and praise uttered. Many have sought and obtained forgiveness, and others are inquiring the way to Zion with an earnest desire that

"He who hath kept us hitherto  
Will keep us all our journey through,"

and that the work will continue to prosper.

We are, respectfully, thy friends,

A. C. and E. H. TUTTLE.

ENOCH HOAG,

*Superintendent Indian Affairs, Lawrence, Kansas.*

OFFICE KIOWA AGENCY,  
*Fort Sill, Indian Territory, Ninthmonth 1, 1871.*

FRIEND: In making my third annual report of the condition of affairs in this agency I have to record that, without any provocation whatever from officers, soldiers, or citizens, of this or other points, the Indians of this agency have been, since last report, carrying on a continuous war in Indian style in Texas, with very short intervals, up to the first of the sixth month last, and occasionally saying that they intended to continue it until the soldiers followed them to their camps, and they could have

a fight, as they wished to prove that they could whip all the soldiers that could be brought against them ; but if they could not they would then cease their raiding. On the 27th of Fifthmonth last, Satanta and various other Kiowas came after their rations, when he told me that he had lately led a party of about one hundred Indians to Texas, captured a train, killed seven men, and taken all the mules of the train.

I immediately went to the post to have Satanta and the five chiefs who accompanied him in the raid arrested, which General Sherman, who was at the post, (Fort Sill,) and Colonel Grierson, the post commander, were more than willing to do. They arrested Satanta and Big Tree. Eagle Heart escaped. Big Bow and Fast Bear were not here with the others.

On the 8th of Sixthmonth last, Colonel McKenzie started with the prisoners to Fort Richardson, Texas, near which they committed the fatal deed. When about one mile from Fort Sill, Satanta, for attempting to kill a soldier, was shot. The other two were tried by civil court at Jacksborough, Texas, and sentenced to be hung, which has been commuted to life imprisonment.

The effect of arresting some of the leading Kiowas and sending them to Texas for trial has been to more effectually subdue them than they have ever been before. On my requisition since they have delivered to me forty good mules and one horse, to replace the forty-one mules shot during the fight and stolen at the Satanta raid.

Were the Qua-ha-da and a few other bands of the Comanches brought here and have all their mules, branded horses, and arms taken from them, I believe there would be but little difficulty in controlling them or the other Indians of this agency. But while the Qua-ha-da band remains on the Staked Plains and forms a nucleus to which disaffected Indians of other bands resort and assist in organizing raiding parties, there will be continual trouble in Texas or elsewhere.

I know of no reason why Indians should not be held amenable to the laws of the country the same as other subjects. Although the Indians of the plains prefer to kill the buffalo with their bows and arrows, and have but little use for guns, except for raiding purposes, yet they are well supplied with arms and ammunition, which they obtain of illegitimate traders, who go principally from Mexico and New Mexico to their camps in the western part of Texas. They also trade to the Indians a kind of hard bread, sugar, dry goods, &c., taking in exchange horses, mules, and cattle, stolen from Texas. Instead of the western portion of Texas expanding with new settlements and thriving villages, as it should, the line of settlement is being contracted on account of the frequent depredations of the Indians.

Much of the time since my last report there has been a large number of Arizona Apaches in the western part of Texas, who have committed numerous depredations in that State, in stealing cattle and horses, murdering citizens, and taking children captives. One captive child was bought of them last spring by a Comanche. The band with whom he stays has been here but once for more than a year. I have informed them that they could have neither rations nor annuity goods until they delivered the child to me. There are four other captives with the Qua-ha-da band of Comanches who have never been to the agency.

Although the Indians of this agency have, in my opinion, forfeited their treaty, it seems futile to make another. They are wards and paupers of the United States, and should be treated as such, and not as nations. There should be magnanimity enough in the Government to

suitably provide for their wants and to advance them in the arts of civilized life without making further treaties with them.

The Kiowa and Comanche Indians are fast passing away, and unless they become civilized and embrace the Christian religion, so as to have the benefit of its moral influence, it is not likely they will last much beyond the present generation. They should have the influence of suitable persons among them, who for some reasons might have certain privileges among them, but I think it very absurd for the Government, under any circumstances, to allow a citizen to be adopted by an Indian tribe, so as to become in law an Indian. When marriages take place between Indians and citizens it should be by the sanction of some civil officer, and made a matter of record.

The accompanying report of Josiah Butler, teacher of the Indian boarding-school, shows a creditable progress made by about 20 of the Indian children, (principally Caddoes,) who regularly attended the school four and a half months, nearly all of whom learned to read in that time, although but two or three of them could speak but little English when they commenced.

Respectfully,

LAWRIE TATUM,  
*United States Indian Agent.*

ENOCH HOAG,  
*Superintendent Indian Affairs, Laurence, Kansas.*

---

No. 81.

AGENCY FOR THE INDIANS OF NEW YORK,  
*Forestville, New York, October 23, 1871.*

SIR: The statistics of farming and education, inclosed herewith, of the Indians on the eight reservations in this agency, show their present population to be 4,906, not including the Shinecocks on Long Island, supposed to number about 150. This shows an increase, since the enumeration taken by the United States in 1860, of over 1,200.

There are 28 schools on these reservations, all free, and mainly supported by the State of New York, except one parish-school, on Onondaga reservation, supported by the Episcopalians. These schools have been taught on an average of thirty-two weeks during the past school-year ending September 30. Nine hundred and ninety-five Indian children have attended them some portion of the time, the average daily attendance during the year being 533. Twenty-nine teachers have been employed by the several local superintendents, who were appointed by the State superintendent of public instruction. Of these teachers five were males and twenty-four females; eleven of either sex being Indians, who have succeeded well, giving good satisfaction. I deem it important to increase the number of Indian teachers and their qualifications, and believe that appropriations for the civilization of this people cannot be better expended than in educating and training the brightest and best qualified of the Indian boys and girls as teachers for these schools.

The Society of Friends, at Philadelphia, completed early in the season the new school-house, referred to in my last annual report, on the Allegany reservation, and the school is now under the charge of the State superintendent of public instruction. Yet the Friends continue to conduct it in their own way. There are 25 children in the school, who

are required to work some every day; the boys in farming, chopping wood, &c., and the girls in household duties. The school is well conducted, and is producing the best results.

Under the direction of Hon. A. B. Weaver, State superintendent of public instruction, an institute for the special training and instruction of teachers of the Indian schools of the Allegany and Cattaraugus reservations was held two weeks in August last on the last-named reservation. The efficient local superintendent of these schools, C. E. Benton, of Fredonia, New York, furnishes me with the following report of this institute, which I beg leave to embrace herein as part of my report.

The institute was conducted by Professor H. R. Sanford, of Fredonia, New York. But two or three of the teachers had ever attended an institute, and the Indians generally had but a very limited conception of what was expected of them concerning the keeping up of the schools. Being satisfied that the Indian schools required a different style of teaching than the common district schools of the State, I took Professor Sanford with me on a visit to the schools on both reservations, previous to the institute. He was thus enabled to acquaint himself with the defects of the schools, and make his course of instruction at the institute more practical. Some thirty-five attended regularly. The teachers for the coming winter and summer schools, with one or two exceptions, will be selected from this number. The attention they gave to the instruction given satisfied me that the efficiency of the schools will be very much increased. The evenings were taken up with lectures, which were held at different points and were well attended by the Indians. The lectures by Professor Sanford, O. W. Johnson, Dr. J. W. Armstrong, and one by yourself, were especially valuable. The importance of regularity of attendance at school was particularly urged, and was apparently realized by those present. Prominent Indians, in reply to the lectures, acknowledged that they at first construed the offer of the State to educate their children into a new attempt to cheat the Indian, but that they now know they were mistaken; that the education of their children would be a great advantage to them, and that they should exert themselves to have their school-houses comfortable and their children at school every day on time. Heretofore one of the great drawbacks has been the careless indifference and lack of co-operation on the part of the Indian parents, and if this experimental institute has really been the means of inciting an educational revival among the Indians, as it appears to have done, it will be of incalculable benefit, aside from the solid instruction given the teachers, and the better understanding they have obtained of the nature of their duties, and how best to perform them. The Indian children, rightly managed, make good scholars, and first-class Indian schools are a possibility. I have now in my employ four Indian teachers, two of either sex, whom I regard as more efficient than the majority of white teachers, and the sooner the schools can be supplied with properly qualified Indian teachers the better for the objects to be accomplished.

I have embraced so much of Mr. Benton's report herein on account of the subject, and to show the condition and wants of these schools, and especially the necessity of liberal appropriations for the education and training of teachers for them by a thorough course of study and discipline in the normal schools and academies of the State.

The several reservations in this agency contain about 88,709 acres, of which 19,152 acres are cultivated by Indians, and their wealth in individual property, exclusive of farm improvements and buildings, is estimated at \$334,600. They have raised the past season 18,900 bushels of wheat, 41,743 bushels of oats, 50,897 bushels of corn, and other farm products usually raised in this State in about the same relative proportions. The crops in all the reservations have been better this year than the last.

More attention is being given than heretofore to the cultivation of fruit on all the reservations. The best varieties of apples are now raised in considerable quantities on the Tuscarora and Cattaraugus reservations. Especially is this true of the Tuscarora reservation, on which I estimate the product of choice varieties of winter-apples this season at 4,500 bushels, worth \$3,000. Peaches of the best varieties are also raised on this reservation quite abundantly, one Indian farmer, Mr. John Mount Pleasant, having a thrifty young peach-

orchard of one thousand trees, just beginning to bear, from which he has gathered this season about 300 bushels of choice peaches, worth \$2 per bushel.

Agricultural fairs were held in September last on the Cattaraugus, Tonawanda and Onondaga reservations. All were well attended, and were better than any of the previous fairs on the same reservations. About 4,000 people attended the Iroquois fair in the Cattaraugus reservation, and the receipts were over \$2,000, which were mostly expended in paying premiums to exhibitors. The display of horses and cattle, grain, vegetables, canned fruit, and articles of domestic manufacture, in most respects would compare favorably with the ordinary country fairs of white men, and in the display of vegetables far better. About 800 different varieties of articles were exhibited. The annual address at the Onondaga fair was delivered by Hon. Horatio Seymour, of Utica, and excellent and practical addresses were given at the Iroquois fair, at Cattaraugus, by O. W. Johnson, esq., of Fredonia, New York, and Hon. A. B. Weaver, state superintendent of public instruction.

There has been in years past considerable intoxication among the Indians at these annual fairs, but there was very little this year. I caused printed notices to be posted on the several fair-grounds warning people of the penalties incurred in selling liquors to Indians, which, I have reason to believe, had a good effect. The prosecutions in the United States courts, during the past year, against persons for selling liquors to the people, have had a most beneficial influence, causing an almost entire discontinuance of the traffic in the vicinity of the reservations.

I inclose herewith the annual report of the trustees of the Thomas Asylum for Orphan and Destitute Indian Children. This institution continues, under most excellent management, and is doing a commendable work for the improvement and civilization of the Indians. Its capacity for usefulness is being enlarged by certain permanent improvements, under the direction of the trustees, as appears from this report, causing an outlay of several thousand dollars. I respectfully recommend the continuance of the annual appropriation for its support.

Very respectfully, your obedient servant,

D. SHERMAN,  
*Agent.*

Hon. H. R. CLUM,  
*Acting Commissioner of Indian Affairs, Washington. D. C.*

---

No. 82.

DANIEL SHERMAN, Esq.,  
*United States Agent for New York Indians :*

SIR: The trustees of the Thomas Asylum for Orphan and Destitute Indian Children respectfully beg leave to report to you, and through you to the Indian Department at Washington, the condition of this institution for the year ending September 30, 1871.

The number of children reported under care at the close of last year was 99, of whom 15 were, at that time, discharged, and 2 were received, leaving, to commence the current year, 86, of whom 45 are boys and 41 are girls.

The number remaining through the year was 65. There were received during the year 28, making the total number 112, of whom 61

are boys and 51 are girls. There has occurred one death, and 23 have been discharged, leaving the number, at the close of the year, 88, of whom 50 are boys and 38 are girls. The average of the whole year is  $84\frac{112}{365}$ .

The financial statistics are as follows:

|                                              |            |
|----------------------------------------------|------------|
| Receipts from all sources.....               | \$9,141 03 |
| From the State of New York.....              | \$7,682 21 |
| From United States Indian Department.....    | 1,000 00   |
| From annuities of Indian children.....       | 255 58     |
| From various collections and donations.....  | 98 25      |
| From labor and sale of various articles..... | 104 99     |
| Total receipts, as above.....                | 9,141 03   |

The amount of disbursements during the year have been—

|                                                                 |          |
|-----------------------------------------------------------------|----------|
| For meat.....                                                   | \$518 60 |
| For bread and breadstuff.....                                   | 1,652 34 |
| For groceries and other provisions.....                         | 210 68   |
| For clothing.....                                               | 591 41   |
| For labor, including salaries of superintendent and matron..... | 2,120 31 |
| For house-furnishing and repairs.....                           | 264 01   |
| For fuel and lights.....                                        | 312 29   |
| For tools, blacksmithing, and farming utensils.....             | 210 27   |
| For stock and feed for stock.....                               | 47 97    |
| For rent of land, seeds, and manures.....                       | 164 98   |
| For traveling expenses.....                                     | 20 78    |
| For medical and funeral expenses.....                           | 125 35   |
| For stationery and postage.....                                 | 7 17     |
| For permanent improvement.....                                  | 2,274 89 |
| For exchange.....                                               | 55       |
| For unclassified items.....                                     | 37 87    |
| Total disbursements.....                                        | 8,559 47 |
| Remaining balance on hand.....                                  | 581 56   |
| Total, as above.....                                            | 9 141 03 |

In addition to the above sum, \$2,274 89 paid on a work for permanent improvement, a full account of which will be given in the report for the next year, there has been paid about \$250, the accounts for which are not yet settled, and, therefore, do not appear in the present report.

After deducting this sum, the amount of funds on hand will be less than \$350.

The trustees feel grateful for the \$1,000 appropriation made last year, and received during the present year; and, at the same time, would beg leave to say that a similar appropriation for the current year is much needed in the work for permanent improvement now in progress.

The trustees find abundant cause for gratitude in the progress of the children under their charge in industry and useful knowledge, and in the constantly accumulating evidence of the beneficial influence of the institution upon the Indians.

All of which is respectfully submitted in behalf of the trustees.

B. F. HALL,  
Superintendent.

## No. 83.

OFFICE MACKINAC INDIAN AGENCY,  
*Detroit, September 18, 1871.*

SIR: The President having so recently as the month of May last reappointed me to this agency, it can hardly be expected that I could, in so short a time, sufficiently acquaint myself with its affairs so as to make a very full report of its transactions for the year now last past. I have, however, in obedience to the requirements of the Department, contained in its circular letter of the 10th of June last, prepared the following exhibit of the number and present condition of the Indians within this agency, so far as I have been able to ascertain them, and which is herewith respectfully submitted.

The tribes and parts of tribes of Indians now within this agency, and the number of members in each, including half-breeds or mixed-bloods, as they are called, due allowance being made for errors which may have been committed in their enumeration, may, with approximate accuracy, be stated to be as follows, viz:

|                                                         |              |
|---------------------------------------------------------|--------------|
| Ottawas and Chippewas.....                              | 5,750        |
| Chippewas of Saginaw, Swan Creek, and Black River ..... | 1,550        |
| Chippewas of Lake Superior.....                         | 1,125        |
| Chippewas, Ottawas, and Pottawatomes.....               | 240          |
| Pottawatomes of Huron.....                              | 50           |
| Total .....                                             | <u>8,715</u> |

It is proper for me to state in this connection that of the above Indians, those designated as Chippewas, Ottawas, and Pottawatomes, numbering about 240, are not now considered as treaty Indians, the Government having in the year 1866 made a final settlement with them. They are, however, embraced in the above schedule for the purpose only of exhibiting as nearly as may be the entire Indian population of the agency.

Having thus given the number of the Indians within the agency, I now beg leave respectfully to state that more than twenty years observation and experience among them enables me most emphatically to say that, under the guardianship of the United States and the liberal policy pursued toward them by the State of Michigan, aided by various religious societies and benevolent individuals, they have made considerable progress, not only in the arts of civilized life but in Christianity also.

In proof of this, it may be mentioned that nearly all of them have not only ceased to be blanket Indians, but they have, to a less or greater extent, adopted the habits and customs of the white man, including in many instances the profession of the Christian religion and the public worship of Almighty God.

And while it is true that portions of them are still leading roving lives and are dissolute in their habits, living in huts and wigwams, it is equally true that many, if not most of them, are now living quite comfortably in either frame or log houses, built chiefly by themselves, and on the reserves set apart for them as homes by the treaties of September 30, 1854, July 31 and August 2, 1855, and October 18, 1864, and who are now supporting themselves and their families in a comfortable manner by the cultivation of the soil and by other industrial pursuits, as will appear from the accompanying agricultural report.

This, it must be confessed, is not only a most gratifying proof that

the Indian can be civilized and even christianized, but it is also a cheering evidence to those who have for years been engaged in this labor of love and of mercy that their humble and well-meant efforts, put forth in their behalf, have not been in vain.

But gratifying as this exhibit is and must be to the friends of this too generally decried people, it may nevertheless be well doubted whether a serious check is not now about to be put upon their further advancement in Christian civilization. For myself I believe this to be the case, and for the following reasons :

When first, and even before, I had charge of these Indians as their agent, I became fully satisfied that the only feasible way to secure their further advancement in civilization, and so save them from relapsing into their former savage state and from their utter extinction as a people, was for the Government to confine them to and further protect them upon the reserves set apart for their occupancy ; and that if patents were to be issued to them in severalty for the lands selected by them, as provided for in the treaties already referred to, then they should contain a clause utterly prohibiting them from alienating the land, for a generation or two at least, or until it should be made to appear that they had rendered themselves competent to have the ultimate title to their home lands vested in themselves.

To this end my best efforts were then directed, and with a fair prospect of success, when my removal from office became an accomplished fact. I believed then, as I believe now, that of the more than 8,000 Indians in Michigan, but few of them are as yet competent to take charge of their own affairs, as against the scheming, grasping, white man, without further governmental assistance ; and that, therefore, and for that very reason, they ought not to be intrusted with the absolute title to their home lands, except, perhaps, in a few well-known instances.

Returning to the agency again, after an absence of about two years, I soon learned that my predecessor in office had recommended to the proper authorities at Washington the issuance to them of patents in fee for the lands selected by them of 80 and 40 acres each, to the number of about 2,500, and that thereafter the guardianship which the United States has so long and so beneficially exercised over them should forever cease, and, to use his own language, "let them go." This recommendation, if carried out, would, in my opinion, be most unfortunate and pernicious to these Indians, and, therefore, I hope it will not be adopted.

In proof of the entire soundness of the position I have taken in this report, and elsewhere, touching the incompetency of the Indians in Michigan rightly to manage their own affairs to the extent proposed, and to demonstrate the fact that an evil day has already come upon them if the policy referred to shall be persisted in, I beg leave further to say that about 400 patents were transmitted to my immediate predecessor in office for delivery to the Grand River Ottawas and Chippewas in this State, before he was retired from the service. About fifty of these patents were delivered by him to those Indians in the month of October last, and the residue of them in, as I am informed, the following March.

And here I deem it worthy of special remark, and therefore will say, that if there are any Indians within this agency who are sufficiently advanced in civilization to be intrusted with the absolute title to their home lands, as well as that of their children, the Grand River Ottawas and Chippewas are the Indians.

And yet the result of that experiment, covering, as it does, in its

scope only a few months, and therefore but partly developed, is anything but assuring to the welfare of the poor Indian; nor will it be very pleasant for his real friends to contemplate, as the following exhibit of it will most abundantly show:

At the request of those Indians I made them an official visit in July last, and while there I ascertained from a personal examination of the files and records kept in the office of the register of the county of Oceana, in this State, and in which their reserve is partly situate, as well as from other reliable sources of information, that the keen-scented and grasping white man, with his artful cunning, had already been there, and that by deed and other expedients he had actually possessed himself of more than 6,000 acres of the land so patented to them as their future homes. I consider that reserve in a fair way to be broken up, and that at no distant day; for I understand that the work of dispossessing those Indians of the title of these lands is still going on without let or hindrance.

And what is and will be true of this reserve will, in all probability, sooner or later be true of the other reserves of the agency, provided the like patents shall be issued to the Indians located thereon. And most assuredly this will be the case if the greed of gain, whisky, the general taxation of the Indians, and other pernicious influences, can accomplish it. In my opinion, the general result of all this will be an unnecessary amount of poverty and wretchedness to the Indian and the hastening him to utter extinction as a race, and to the State of Michigan an increased amount of pauperism and crime within its borders.

I have just returned from another official visit made to the Chippewas of Saginaw, Swan Creek, and Black River, and a small portion of the Ottawas and Chippewas, who are located in Isabella County, in this State, and during which, under the instructions of the Department, I was required to witness the delivery, by its special agent, to them at Isabella, and at other points in its vicinity, about 1,000 similar patents for their lands.

And while the selections of lands made for those Indians, the issuing of patents for the same, as well as their delivery, are to be made the subject of a special report at the proper time, it is deemed not inappropriate for me to state in this report that, from what transpired during the visit, it would seem that the affairs of those Indians, so far as their timber and land matters were concerned, have, for the last two or three years, been administered by their white neighbors more than by their regularly appointed governmental agents; and administered, too, as it is not uncharitable to suppose, largely in the interests of these self-constituted, superserviceable agents and their abettors.

I think I am safe in saying that, during the last few years now past, more than five hundred contracts, large and small, written and otherwise, have been made with those Indians, chiefly for their pine timber, but in a few cases for the land also, and this before any patents had been issued for their lands, save one.

It has been estimated that, under cover of these contracts, from fifty to one hundred millions of feet of their pine timber has already been cut and removed from the Isabella reserve alone. And furthermore, information has reached this office, which is regarded as reliable, that it is in contemplation by the parties in interest in those contracts to cut and remove millions upon millions of feet more of the timber now standing upon that reserve the coming winter, and for years to come.

Referring you to the case of the United States against Holliday, which

went up to the Supreme Court of the United States from this judicial district for its action, as reported in the 3d of Wallace's Reports, page 407, and to the case of the Kansas Indians, as reported in volume 5, page 737, of the same reports, you will permit me respectfully to say, that this office believes, and will so hold until it shall be overruled, that nearly all of the above contracts, and the transactions under them, have been in fraud of the treaty and other rights of those Indians.

If this is the case, then the state of things which has heretofore existed, and which now exists on that reserve, imperatively demands, and should not fail to receive, the prompt and energetic action of the Department, and at the earliest day practicable, lest the reserve shall be despoiled of one of its principal values, greatly to the damage and discomfort of the Indians, its real owners, and who seem to have little or no power to protect themselves.

In conclusion, let me further say that this presentment of the affairs of the agency in this form is made from a sense of duty, and chiefly in the interest of the Indians now under my charge, and whether or not it shall prove a real benefit to them remains to be seen.

Very respectfully, your obedient servant,

RICHARD M. SMITH,  
*United States Indian Agent.*

H. R. CLUM, Esq.,  
*Acting Commissioner Indian Affairs,  
Washington City, District of Columbia.*

---

No. 84.

UNITED STATES INDIAN DEPARTMENT,  
*Green Bay, Wisconsin, September 14, 1871.*

SIR: I have the honor, in accordance with instructions from your office, to submit the following report, showing the general condition of the Indian tribes in charge of this agency, since the 15th of November, 1870, at which time I entered upon the duties of this office:

I am under special obligations to Lieutenant W. R. Bourne, of the United States Army, who preceded me at this agency, for his kind and gentlemanly efforts to aid me in gaining an understanding of the duties connected with this office. The Menomonees, Stockbridges and Munsees, and Oneidas comprise the tribes in care of this agency. The former, for generations, has roamed over the hills and valleys of this portion of Wisconsin; although their domain no longer embraces millions of acres as formerly, but is now reduced to some 230,000, still they feel strongly attached to their native lands.

The Wolf River, with some of its many tributaries, flows through this reservation from north to south, affording extensive water-power and abundant facilities for removing timber to market. Only a small portion of the land embraced in this reserve can be called good for farming purposes. It was very unfortunate for this tribe that the agent who located them on their present reserve should select the poorest portion for their homes, as they found little to encourage them in their efforts to cultivate the poor sandy soil around them; on this account they have made much less progress in their agricultural pursuits, and have been more inclined to continue their former habits of hunting and fishing. But of late they seem inclined to move from these worthless lands to those of better soil, but heavily timbered.

In this move for a new home they are now manifesting much zeal, as those who have made the trial now find much better returns for their labor than on the lands they have been trying to cultivate for the past fifteen years. I think it of great importance just now that these Indians should be encouraged in their farming inclinations and efforts by being better supplied with teams and farming implements to aid them in clearing and cultivating their new farms.

It was in order to provide for these pressing wants in part that application was recently made by the agent to the Indian Department in behalf of this tribe, asking permission to cut and remove a portion of the pine timber now standing on this reserve to the lumber market, the Indians being employed to perform most of the labor. I am confident this lumbering plan, wisely managed, will prove of vast good to this tribe. It will not only furnish many of them work during the winter season, but the timber thus converted into money will furnish funds to be used under the approval of the Department for an increase of their agricultural and educational facilities.

The tribe are heartily in favor of thus cutting and disposing of their pine timber, as they will be sure of getting the full value thereof, as the logs will be sold to the highest bidder, while at the same time they will receive the labor benefit of cutting and removing their timber to market. I trust the result of this lumbering enterprise will be such as to satisfy the Indian Department and all concerned that this is the best policy to be pursued with this tribe in reference to their pine timber.

The past year has been one of general prosperity with this tribe. If they have not been able to cultivate as many acres as formerly, I believe the aggregate value of the crops raised will exceed that of last year. The sugar season of last spring was one of the best they have ever enjoyed, the value of this crop being \$15,000. This crop brings them quick returns for their labor, and is the most remunerative branch of business in which they now engage, and they prize it so well that nearly every family moves into the sugar-bush as the season for making comes around.

I am much encouraged by the disposition shown by many of these Indians to work, and I am confident if they can have the help they ought, in the shape of teams, farming tools, and seeds, they will soon be able to provide for themselves the necessaries of life.

I think there is much more harmony of feeling and action among the tribe than for some time past. I have made special efforts for this object, both by legal and moral suasion; the former with whisky-sellers and other outside troublers, and the latter with the Indians themselves. In both cases I have been permitted to see good results.

#### SCHOOLS.

This portion of my work is far from being satisfactory in results; one reason is doubtless to be found in the unsettled condition of many families of late, owing mainly to the moving process going on; others have moved so far away from the place of school, to their new homes, that their children cannot now attend. This change of location on the part of so many families seems to demand the building of one or more school-houses, for the use of the tribe, at once. Allow me to refer you to my letter of May 9, 1871, as I there give the Commissioner my views, plan, and estimates for one of the school-buildings, such as I deem needful for the best management of the school-work with these Indians.

I do most respectfully urge the consideration of this matter, as it is

not possible to carry forward the school-work with any degree of success under the present condition of things. The children who attend school with a fair show of punctuality are making commendable improvement. I have visited both the schools on this reserve, and believe the teachers are trying to fulfill their respective duties. The other employés at this reserve are faithful, earnest men, and, as a general thing, are doing well for the tribe. I learned soon after payment, in May last, that a number of families belonging to this tribe had for some time been living away from the reservation among the whites, or on land they claimed under the "pre-emption" or "homestead act." After consulting with the chiefs in reference to these persons, I gave notice that all such families would be stricken from the pay-roll if they did not return to the reservation by the time of next payment. This notice has brought several of the wanderers back to their tribal home.

The trader in charge of the store on this reserve, I am happy to state, is a Christian man of strict integrity. As the sure result of fair and honorable dealing, he seems to enjoy the full confidence of the whole tribe, and is really doing much good by the moral influence he is exerting over these Indians, and I regard him as a true helper in my efforts for the elevation of this people.

#### STOCKBRIDGES AND MUNSEES.

I do not wish to review the troubles and divisions existing among these few Indians for many years. It is to be hoped the late act of Congress passed for their relief will result in securing the desired end. This reservation embraces 46,000 acres, and joins that of the Menomonees. The soil is of similar quality, and, like their neighbors, they too settled on the poorest portion of their land, thinking, doubtless, more of the saving they would make in clearing the same, than of the quality of the land they would have for cultivation. They soon found the crops they raised on these farms were easily gathered and soon consumed. The supply they have produced the past season is very meager, and the prospect before them for the coming winter must be ominous of hunger.

These Indians have long enjoyed good advantages for improvement, and would, in my judgment, be better on the whole, were they to relinquish all dependence on the Government as Indians, and assert the full rights of citizenship. I believe this step would do more to elevate them than anything else. As they have long been talking and planning for moving to the West, they have more than ever been thinking the past season that the time was near at hand. This move to the West will no doubt be best for those of them who prefer to retain their tribal connection. Nearly all the members of this tribe can read and write the English language, and some of the younger persons and children have a fair knowledge of the common English branches. I have visited the school in charge of the Rev. Jeremiah Slingerland and was much pleased with the good order and deportment of the pupils, and also with their correct and prompt recitations.

There is much feeling on the part of the "citizen party," as they are called, on account of being cut off by the recent act of Congress from all rights and privileges of the tribe, even from holding the improvements they have made on the land they have cultivated for the past fifteen years, when they were acknowledged as a part of the tribe under the treaty of 1856.

#### ONEIDAS.

The reservation occupied by this tribe lies near Green Bay, and con-

tains some sixty-five thousand acres, quite a portion of which is good farming land. A portion of this tribe are industrious, thriving farmers, as their broad fields of grain very plainly indicate. Some of their farms and stock will compare favorably with their white neighbors' around them. Could they all be induced to engage in cultivating their lands, and cease to live upon and squander the timber belonging to the tribe, they would be far better off.

If the Indian Department cannot restrain this constant cutting and selling of timber on the part of some members of the tribe, not for the sake of clearing the land for cultivation, but because they can get a living easier than by farming, then it seems very desirable that the lands of this tribe should be divided, and so allotted that each family can hold and control their rightful share of the property. As the case now stands, some members are consuming every year thousands of dollars of tribal property; thus detracting from the value of their lands, when they should be adding to the same by cultivation.

Intemperance has, for years, been doing its wretched work among a portion of the Indians, and unless the many temptations of this kind can be removed numbers of them will be ruined, and much sorrow and suffering entailed upon their families. Three complaints were made by the agent last May against persons for selling whisky to members of this tribe. These cases were brought to trial at the July term of the United States district court, held in Oshkosh. All three of the offenders were convicted, fined, and imprisoned for thirty days. These convictions so alarmed the liquor-sellers that, for a while, the Indians were not able to get much whisky, and they could come into our town and go home again as sober men. But I learn of late that some of the Indians have found access to the "fire-water" again, and some of them are showing the drunkard's mark. It is only by following up these liquor-sellers with prosecutions that this illegal business can be checked. This I am resolved to do, as my time will allow, believing I can in no other way do more for the good of the Indian.

#### EDUCATIONAL WORK.

This has been carried on the past year much as usual, by the Episcopal and Methodist missionaries. Each reports general prosperity and increasing interest on the part of those attending school. There is, however, in my judgment, the need of more vigorous prosecution of the school-work among this tribe. The whole number reported as attending school the past year is 240, with an average of only 100, while the whole number of school age is nearly 400. These figures not only show lack of regular attendance, but they indicate that one-third of the children do not attend school at all.

It is not easy to elevate these children and improve their social condition while they remain in utter ignorance. I am confident the best good of these Indians will be promoted by an increase of school privileges. For a more full expression of my views and plans I would respectfully invite your attention to my letter in reference to this matter of May 9, 1871.

For an exhibit of farming products and population of the tribes at this agency I respectfully refer you to the statistical table herewith inclosed.

Very respectfully, your obedient servant,

WM. T. RICHARDSON,

*United States Indian Agent.*

Hon. COMMISSIONER OF INDIAN AFFAIRS,

*Washington, D. C.*

## No. 85.

AGENCY OF SAC AND FOX INDIANS IN IOWA,  
*Toledo, Iowa, September 1, 1871.*

SIR: In compliance with instructions from the Department, I have the honor to submit the following report of this agency for the period during which I have had charge, together with such information relative to the affairs and condition of the Indians under my charge as appears to me should be embraced in the annual report.

I took charge of the agency October 11, 1870, relieving Lieutenant Frank D. Garretty, United States Army. This tribe or band is a part of the Sac and Fox Indians of the Mississippi, a large part of whom never joined their tribe, either in Kansas or the Indian Territory, but resided in this (Tama) county prior to its organization, and have persisted in continuing to make this their home.

In the year 1857, by the sale of ponies and furs, they managed to purchase eighty acres of land on the Iowa River, near this place; and since the Government commenced paying them their proportion of annuity with the balance of the tribe, in 1867, they have purchased other lands adjoining with their tribal fund, so that they now have four hundred and nineteen acres, of which about ninety acres are in cultivation.

The farm work is mostly done by the women, in accordance with Indian custom; however, the men are showing more disposition to work than formerly. During the harvest just past the men of the tribe have earned, in binding and shocking grain for farmers in the vicinity, the estimated amount of \$900. They have been working out in harvest for two or three years past, but have done better this year, that is, they have earned more money, in the aggregate, on smaller wages, than any previous year. The cultivated land is planted in corn, potatoes, and beans, with the usual quantity of pumpkins, squashes, turnips, &c., the principal portion, however, being in corn, of which they have raised about two thousand bushels.

I am not able to report any considerable advancement in civilization, notwithstanding they are surrounded and have the example of an enterprising and friendly population. It is little of the good they are disposed to copy from their white neighbors. Little progress can be looked for until they have a good school established. This is of utmost importance to their well-being and advancement. They are not willing, and could not were they so disposed, from their scanty means, to erect school buildings. They are poor, enjoying few of the comforts of their civilized neighbors. I have asked, and would here repeat the recommendation, that Congress make an appropriation sufficient to build them a school-house, when this agency could be turned over to a missionary association and a school maintained without further expense to the Government. They unwillingly listen to any proposition for removal to any other home, but unless some advantages for their improvement here are to be provided, it would be far better that they be removed to the new home of the Sac and Fox Indians, in the Indian Territory, where they have a beautiful reservation, a tract of land embracing 480,000 acres, well supplied with living streams of water, rich and productive bottom-lands, prairie and wood lands, diversified, and a climate much more congenial and far better adapted to their exposed habits. The advantage of such removal, could this band be made to see it and induced to avail themselves of its benefits, would be great. This new home possesses superior advantages naturally as to climate, soil, timber, and extent of reservation, which would offer to each member of

the consolidated tribe nearly a whole section of land. The facilities for agricultural pursuits would be all that could be desired, while the buildings provided for by treaty stipulations, including those for educational purposes, are ample for the wants and necessities of the whole tribe, where they would be free from the demoralizing influences to which they are here constantly subjected. But if they are to remain here, and they appear to have a very strong aversion to any change, for their benefit, as well as that of their white neighbors, with whom they are almost constantly brought in contact, it seems almost indispensable that they should be taught, and at the earliest day possible made competent to become citizens of the United States.

The health of the tribe is reasonably good, though they are afflicted somewhat with fever and ague, living as they do on the low river bottom close by the Iowa River, and subject to all the noxious miasma incident to such locality. A few deaths have occurred since I took charge of the tribe.

The census of the Sac and Fox Indians in Iowa now shows a population of 303, as follows: Men, 81; women, 101; boys, 71; girls, 50; an increase of 8 since the last annual report of my predecessor.

The statistics of farming, forwarded herewith, show the wealth in individual property of the Indians in this agency, not including land or buildings, at \$13,215.

Many of the young persons of the tribe have learned or are learning to speak English; some of them speak it quite well. With the advantages of a school, they would progress much faster. Some of them are adopting citizens' clothes, but the larger part still adhere to the blanket as an article of dress. In all my intercourse with them, I have sought to impress upon them the fact that the Government desired to improve their condition and make them like the whites. Some seem to feel that this is best, and would gladly avail themselves of opportunities for improvement, while very many of them still have a strong prejudice against adopting the habits of a civilized life.

Very respectfully, your obedient servant,

LEANDER CLARK,  
*Special Indian Agent.*

Hon. COMMISSIONER OF INDIAN AFFAIRS,  
*Washington, D. C.*

No. 86.

YANKTON AGENCY, DAKOTA TERRITORY,  
*September 1, 1871.*

SIR: I have the honor to submit the following as my annual report for the year ending August 31, 1871.

I assumed charge of the Yankton agency in November last, relieving Major Goodhue. I found the Yanktons quiet and peaceably disposed, in which condition they continue. They had reaped no crops, owing to the drought, and were being, as they still are, fed by the Government. I found here an engine and saw-mill (portable) in controversy, which controversy was not settled for so long a time that much work which might have been done was not done. That being settled, and an allowance made for a stationary engine, the work will go on better. I found the buildings upon the agency, with the exception of the agent's resi-

dence, to be the veriest hovels, rotten, and falling to pieces, and filled with rats and other vermin. I submitted a report upon their condition, and an estimate for funds to rebuild them. An appropriation for this purpose is imperative, and an entire new set of residences should be built.

I have arranged a corral and cattle-scales in such manner that cattle can be readily weighed, and thus render averaging unnecessary. I found here two mission churches and schools, with a daily average attendance of about 125. There are now three churches and five schools of the Protestant Episcopal Church, and one church and one school of the American Board of Missions, having, altogether, an average daily attendance of 366. The missionaries are all earnestly working, and much good is already evident from their labors.

I plowed and sowed some 40 acres of spring wheat, which yielded an average crop. After very considerable exertion, and the offer of every inducement, I succeeded in getting the Yanktons to do their own plowing, instead of having it done on contract. They plowed about 450 acres, from which I estimate that they will gather 20 bushels each, or about 9,000 bushels. The system of feeding them is the great drawback. Work with them is not considered essentially honorable, and when they are well fed there is no incentive to labor. If some plan could be developed by which only those who endeavor to advance, by building houses, breaking land, fencing, &c., cutting off the worthless and lazy from such benefits, I think it would be well. I certainly cannot indorse gratuitous feeding of them, except as to beef. Meat they must have, and there is no game within their reservation. Let every man who works receive a proper acknowledgment of it by being furnished with subsistence.

I have perfected during the year a system of issuing rations by ticket, whereby each family receives a due proportion. It finds much favor with the majority, who are anxious for the application of it to the distribution of annuity goods, which, when delivered to the chiefs, *are always* so divided that the strong and crafty receive the greater portion, the old and weak going naked. The desire has gone so far that the head chief has formally requested that I divide the goods *per capita*. One condition of issue to these people I make to keep them from roving—that the primary condition upon which the Government pays them anything is residence upon the reserve; and I think it is having a salutary effect.

I am, sir, very respectfully, your obedient servant,

S. D. WEBSTER,  
*United States Indian Agent.*

Hon. COMMISSIONER OF INDIAN AFFAIRS,  
*Washington, D. C.*

---

No. 87.

PONCA AGENCY, DAKOTA TERRITORY,  
*September 25, 1871.*

SIR: I submit herewith my annual report of the condition of this agency from November 14, 1870, at which time I assumed charge, to September 1, 1871.

The general behavior and disposition of the Indians of this tribe have

been very satisfactory, and I am pleased to be able to report that their condition in all respects has greatly improved during the past year. I found the agency without proper buildings for the storage and protection of provisions, farm produce, or implements, or for the residence of employes. Improvements, such as the limited funds the honorable Commissioner has been able to assign for that purpose, have been made. By the treaty of March 12, 1858, by which the Poncas ceded their lands, the Government agreed to expend an amount necessary to erect suitable buildings of all kinds for the agency, and the amount appropriated was expended in the establishment of an agency in the interior, on the Running Water River. By a supplemental treaty of March 10, 1865, that agency was abandoned, the Indians were removed to this place, and the improvements of the old agency in a great measure lost. I therefore hope, as a measure of justice, that Congress will make liberal appropriation for their benefit, so that proper agency buildings, warehouses, and mechanical shops can be erected.

By direction of the honorable Commissioner, a school was opened May 1, 1871, which, under the charge of Mr. James Laurence, the Government teacher, has been conducted with highly satisfactory results thus far.

The board of Indian Mission of the Protestant Episcopal Church, by request of the Indians, has established a mission under the charge of the Rev. J. Owen Dorsey, and are proceeding to erect a fine church and school building. Mr. Dorsey, in addition to his missionary labors among the tribe, has assumed charge of a large class in the school, and has rendered valuable assistance.

During the year small war parties of Sioux have made raids upon the Poncas, carrying off horses and killing stock. The Poncas have not retaliated, under the belief that the Government will keep its faith with them, and that, under their treaty stipulation, remuneration for their losses will be made. Proper evidence of the amount and character of their depredation has been made the subject of a special report.

As far as practicable, Indians have been employed to do the work of the agency, and under the charge of Mr. James F. King, the engineer and superintendent, they have accomplished an amount of work equal to what would have been expected of white employes.

Mr. J. A. Lewis was appointed farmer in May, and the planting and reaping the crops have been accomplished with Indian hands under his supervision. I submit herewith reports of various employes in charge of departments.

Very respectfully, your obedient servant,

HENRY E. GREGORY,

*United States Indian Agent.*

Hon. H. R. CLUM,

*Acting Commissioner Indian Affairs,*

*Washington, D. C.*

---

PONCA AGENCY, DAKOTA TERRITORY,

*September 25, 1871.*

SIR: I respectfully submit the following report of the Ponca school. The school was opened May 1, 1871, and has continued to the present date, with an average attendance of 17 girls and 33 boys. The children have been taught in the common English branches, and have made a good degree of progress, learning quite as readily as white children.

The parents and relations of the scholars exhibit great interest in the advancement of their children, and to their influence is to be attributed the regular attendance.

I am, very respectfully, your obedient servant,  
JAMES LAURENCE,  
*Teacher.*

H. E. GREGORY, *United States Indian Agent,*  
*Ponca Agency, Dakota Territory.*

---

No. 89.

CROW CREEK AGENCY, DAKOTA TERRITORY,  
*September 1, 1871.*

SIR: I have the honor to submit my first annual report relative to the condition of affairs at the Crow Creek and Lower Brulé agencies.

The Lower Yanktonnais band of Sioux Indians are located at the Crow Creek agency, and number about 1,000, which number is often largely increased by transient Indians from surrounding agencies. These Indians I regard as among the best of the Sioux nation. They are peaceable and well disposed, and are gradually giving up their wild and roaming habits, and seem desirous to engage in agricultural and kindred pursuits. They are, however, slow in acquiring habits of industry and in adopting customs of civilization; their advancement is necessarily attended with many discouragements.

During early spring 150 acres of land was plowed and fenced, which has been cultivated by the Indians; but owing to the extreme drought they will not realize more than one-fourth of a crop.

Owing to the friendly disposition of these Indians, military protection was deemed unnecessary and the troops withdrawn on the 3d of May, since which time the Indians have continued the same friendly feeling.

The Lower Brulé Sioux Indians are located on the west bank of the Missouri River, eight miles below the main agency, and number about 1,500. This number is often increased by Indians from the interior and surrounding agencies. Several of the principal chiefs with their bands are located from ten to twenty-five miles from the agency. This arises from jealousy existing among the chiefs and their bands, which makes it a difficult matter to persuade them to locate at any one point. These Indians are of a more wild and roaming disposition than the Lower Yanktonnais, and more difficult to control. During the winter these Indians killed a number of cattle belonging to the agency, and quite a large number belonging to the beef contractor. Medicine Bull, one of the chiefs, was instrumental in encouraging the young men of his band to kill these cattle, telling them that everything in the country belonged to them, and that they had a right to kill cattle when they saw fit. The cattle were not killed to satisfy their hunger, as the rations they were receiving at the time were more than abundant to supply all their wants. The cattle were killed simply to gratify their morbid desire for the wanton destruction of property. These Indians were given to understand, if they persisted in such acts, that rations would be withheld. This seems to have had the desired effect, as no lawless acts of the kind have since been repeated. With the protection of one company of soldiers, these Indians have been more readily controlled than they otherwise would have been. I deem military protection at this place essential.

With the assistance of the agency employ  s in preparing the ground, these Indians have cultivated 150 acres, their principal crop being corn. Many of these Indians have worked with commendable zeal, and, notwithstanding the extreme drought, will have a fair crop, which gives them great encouragement for the future. Taking into consideration the limited experience of these people in agriculture, their future advancement seems as encouraging as one could reasonably expect. The agency buildings at this place are temporary log-buildings, and entirely inadequate to supply the wants of the agency. A substantial warehouse should be at once erected at this place. The present building used as such is so poor as to give but slight protection to stores. On the 3d of May, the saw-mill belonging to this place took fire, and, owing to the combustible material and the high wind prevailing at the time, it was totally destroyed. The saw-mill at Crow Creek agency, by being removed to Crow Creek Island, will be capable of supplying both agencies, so that the loss of the mill will not be as badly felt as it otherwise would have been. Intoxicating liquors are introduced among these Indians to a large extent by unscrupulous white men, endangering life and property.

The rations furnished these Indians by the Government during the past year have been ample to supply all their wants, and have been regularly issued. Annuity goods were distributed last November; annuity goods for the present year are at hand, and will be at once distributed.

These Indians are well supplied with horses and mules, and were they provided with wagons and harnesses for the same they would be better prepared to cultivate the soil. As yet, no school nor mission has been established for these Indians; it is, however, the intention of the Protestant Episcopal Church to establish a mission here at an early day.

I am, sir, very respectfully, your obedient servant,

HENRY F. LIVINGSTON,

*United States Indian Agent.*

Hon. E. S. PARKER,

*Commissioner of Indian Affairs, Washington, D. C.*

---

No. 90.

UNITED STATES INDIAN AGENCY FOR  
ARICKAREE, GROS VENTRES, AND MANDAN TRIBES,  
*Fort Berthold, Dakota Territory, September 10, 1871.*

SIR: In compliance with the regulations of the Department, I have the honor to submit the following report relative to the affairs of this agency:

Having assumed the duties of agent within the last six months, I can say but little of the comparative improvement of the Indians within this agency. I arrived here and took charge of the agency on the 19th May, 1871. The Indians of this agency number about 2,700, which are divided as follows: Arickarees, 1,650; Gros Ventres, 600; and Mandans, 450. The first incident worthy of note was an attack made upon the agency on the 22d May by Indians from the Two-Kettle, Grand River Blackfeet, and Onepapa bands of Sioux. Our loss was one man and one child killed; their loss was two men and five horses. Since then there has not been any further demonstration on their part, although during the

early part of the season the village was kept in an unsettled state by rumors of threatened attacks. The Indians of this agency are pretty well armed, through the kindness of General Hancock, with French rifles, and we have received from the Ordnance Department 50,000 rounds of musket ammunition, caliber .58. The Gatlin gun ordered from the Leavenworth arsenal has not yet been received.

In the agricultural operations of the past season the Indians have succeeded well, the season having been quite favorable. They have produced a large amount of corn and squashes, and a small amount of potatoes and beans, that will be of great assistance to them during the long winter of this country.

The attention of the Department is respectfully called to the absolute necessity of supplying these Indians with food until they are far enough advanced in farming to supply themselves. They are willing and anxious to obtain their own living by farming, and should be located in a milder climate. The seasons here are altogether too uncertain and the climate too rigid for successful farming. The winters are so long and cold that the product of summer is exhausted long before the spring opens. This necessitates the sending away in the fall from the agency, for the want of food to keep them, and off the reservation, for want of game to kill, such as are able to go. This is bad, for any policy that serves to drive the Indian from his reservation retards in the same degree the progress of his civilization. The partially civilized Indian cannot view with favor or appreciate a policy that supplies his warlike brother with everything to support and make life comfortable, while he is obliged oftentimes to suffer for the common necessities of life. The inevitable effect of such a policy will be to alienate the now firm friendship of the Arickarees, Gros Ventres, and Mandans from the Government. As long, therefore, as the Government pursues what is termed the feeding policy in dealing with Indians, it is all-important to see that those of them that are known to be friendly and living quietly on their reservations are liberally supplied. The friendship of these Indians has not been of a vacillating or uncertain kind, but has never failed under the most trying circumstances; and even when cold and hungry they have refused to follow the well-fed Sioux in their career of either idleness or hostility. If their lands were exchanged for a more genial climate, they have the ability and intelligence to make themselves comfortable and respected.

The Indians have had this year under cultivation about 640 acres, although the exact quantity of land cultivated by them of their own breaking is very difficult to get at, as it lies in irregular patches and scattered through the brush in the bottoms. The work on this amount of land was done entirely by Indians. The men are willing and anxious to work, and have had employment given them whenever there was an opportunity, particularly during harvesting, when they were of great assistance to us in binding and raking after the reaper. Many of them have asked for larger plots of land for the next year, and the interest taken in agriculture has very much increased during the past six months, owing, doubtless, to the abundant crops of the present year. Many of the Indians have cut and put up hay for the use of their horses during the winter. Their conduct is orderly, and they take pride in obeying the orders of the Government and their agent. Intemperance has thus far been unknown.

Permit me to suggest that, as a reward for attention to their ground and crops, a cart and harness be given to a certain number, say 25 or 30, carts and harness to be of the kind used by the half-breeds of the

Red River settlements of the north, the cost of which would be about \$20 in gold for cart and harness. They would be used for hauling wood, water, hay, and their crops, all of which now are packed on squaws, and, with the exception of the water, are carried any distance within four miles. This might, in time, have a tendency to elevate the squaws a few degrees above a beast of burden. I would also recommend, instead of sending the usual quantity of coats and pants, that the same amount of money be expended in Henry carbines and ammunition for same, say about 25 carbines and 300 rounds of ammunition to each—one for each of the two chiefs of the three tribes, and the rest to be distributed *pro rata* among the soldiers of the three tribes. They ask for this, because the Sioux (their enemy as well as of the whites) are well armed with this kind of weapon, and breech-loaders of all descriptions are plentiful among the various bands. This will place them on a more equal footing, and enable them to repel the attacks of the Sioux upon their village with greater ease.

The Indians complain of the northwestern half-breeds, subjects of Great Britain, who, year after year, in the spring and fall, extend their buffalo-hunts from the 49° as far south as the Missouri River, and thus deprive the lawful owners of the soil of what they have chiefly to rely upon. They destroy the game and at the same time excite the hostile bands of Sioux against the whites, supplying them with arms and ammunition, (powder and lead,) and prepared ammunition for the various kinds of breech-loading guns; also trading great quantities of whisky. They are on the most friendly terms with all the Sioux and the northern bands of Indians.

Twenty-six of the Indians of this agency are employed by Government at Forts Stevenson and Bedford as scouts, and give good satisfaction. They were also employed at Fort Rice, but at the expiration of their term of service they were discharged. Sioux scouts were also employed there, and as the Sioux are not friendly to the Arickarees, it was thought best to discontinue their services.

The buildings at this agency are insufficient for the use of the agent and employés. Proper places for storage of grain, vegetables, farming tools, &c., are greatly needed, but will in part be remedied when our saw-mill is in repair and ready to run. For a detailed account of the buildings necessary and resources, I would respectfully refer you to my letter of May 27, 1871. The mill and machinery were very much out of repair, and as we have not the proper tools for making the necessary repairs, we have been very much delayed in our operations. The mill will be ready to run on the 15th instant, and I trust that no further delay will be experienced. Another great difficulty was, that we were unable to make sufficient steam-power for the engine, our machinery and work needing more steam than we could get out of the boiler. Believing it to be for the best interests of the service and in the end more economical, I have purchased and placed in the mill a nearly new boiler, connecting it with the steam-chest of our old one. The supply of water from our well being insufficient and liable to give out during a low stage of water in the river, I had the engineer sink a drive-well 32 feet below the foundation of the mill, which will give a sufficient supply of water for the use of the mill and the agency. The boiler had heretofore been supplied with water by hand-pump and barrels. This was a long, wet, and sloppy job, occasioning vexatious delays, and was a constant annoyance. To remedy this I have built an iron water-tank capable of containing 79 barrels of water, and connected the pump with the engine. This will save the expense of one man, and perform the work cleaner

and quicker. The entire cost of these repairs, including cost of boiler and wages for engineer and sawyer, will be less than \$1,200, enabling us to do twice the amount of work and with no greater expense. This outlay was unavoidable, as the old boiler was unsafe, and a new boiler alone would have cost \$1,200 without transportation, which would be at least 10 per cent. delivered here.

With the material now on hand the expense of this agency can be very much reduced next year, and, if the climate was only favorable, could in two years be made almost self-supporting.

Next year, if as favorable as this, we shall raise grain enough to feed our stock, thus reducing the expense of the agency very considerably. This year there was not any corn raised upon the agency farm. There was none planted when I arrived, nor was there any seed-corn here to plant. The corn raised by the Indians lacks the oil essential to make it nutritious for either man or beast; it is very prolific, and, if mixed with some other kind of early corn, would soon improve. I shall try the experiment next year. Our crops raised consist of wheat, oats, barley, peas, (field,) potatoes, and turnips. A small garden was planted for the use of the agency mess, (employés,) and everything did well this year. For a short time our potatoes were threatened by a large green worm, similar to the tobacco-worm, that in a short time strip the vines of leaves, leaving but the bare stalks standing on the hill; but we fought them with our entire force, and employed squaws to assist in killing them, going over our potato-patch repeatedly until they disappeared. They lasted about three weeks, and have gradually disappeared; but on digging our potatoes we find them in a chrysalis state under ground, so that we may expect a repetition of this next year. The yield of potatoes will be over 150 bushels to the acre; the rest of the vegetables are not yet dug.

On the 26th of July the grasshoppers came upon us and remained about four days. They destroyed a great part of the Indians' beans, but their corn and squash were not very much injured. They seemed, however, to particularly fancy the turnips and cabbage belonging to the agency, and cut them down to the ground; the vegetables have, however, taken a new start, and promise a fair crop. A slight frost this year came about the 15th of August, doing but little harm to the Indians. The heavy frost came on the night of the 5th of September, but as the Indians' corn and squash were all in, no damage was done.

I found on my arrival that the agency was destitute of the proper and necessary farming tools and machinery for the gathering and preservation of the crops, the value of which was so great to this agency that I deemed it for the best interest of the service to purchase such articles for the use of the agency as were indispensable, without waiting for your reply to my letter of the 27th of May, 1871. As these articles were needed at once, or not at all this year, the length of time lost in waiting replies from Washington would have placed our crops beyond saving, and the entire work of the season would have been lost. Such implements as shovel-plows, cultivators, and other articles that could be manufactured here I have had made by the blacksmith, and the purchases have only been of such tools as were indispensable and could not be made here.

Another want which will in time be severely felt, is that of a good interpreter. The one in employ at present is an old man, and may not live very long. In case of his loss, I do not know how he can be replaced. He speaks the three languages of the agency, and also the various Sioux dialects. I would recommend that some intelligent young Indian, who

can talk the languages of the agency, be selected and sent east to school, taught English and a trade, then returned to this agency, and set at work in the shops, and when the time comes he would be ready for his position.

The progress of the school has not been very satisfactory since the first of May. Since warm weather it has been at times almost impossible to get the children to attend, as their services were needed at home and in the field. I thought the progress made did not justify the outlay, and, as the room was needed for other purposes, I closed the school.

I would call the attention of the Department to the necessity of having the limits of this reservation defined and acted upon by Congress in its next session. The proposed reservation, under orders of the President, dated April 12, 1870, has, I think, never been confirmed by the Congress. The neglect of this may, in a year or so, give rise to serious complications, that may throw these Indians on the side of the hostile.

The general health of the Indians at this agency has been very good. A hospital or room for the purpose of placing serious cases, where they can be treated and watched over without the interference of the Indian doctors, is needed, and would undoubtedly save lives that are now unavoidably lost.

I would respectfully invite your attention to the accompanying reports of the doctor, engineer, and farmer, for the details of their respective departments. In view of the large amount of corn raised by these Indians, I would respectfully suggest that 13 hand corn-shellers be purchased among their annuity goods, for distribution *pro rata* among the tribes.

Much credit is due my predecessor for the able and efficient manner in which the business of this agency was conducted during his term of office; and by his untiring exertions and ingenuity many of the Indians were saved from death by starvation and cold during the past winter.

I am, sir, very respectfully, your obedient servant,

JOHN E. TAPPAN,

*United States Indian Agent for Arickarees, Gros Ventres, and Mandans.*

Hon. COMMISSIONER OF INDIAN AFFAIRS,

*Washington, D. C.*

FORT BERTHOLD AGENCY,  
*Fort Berthold, Dakota Territory, May 31, 1871.*

SIR: I have the honor to submit this my first report of the Indian school at this agency. The school was opened on the 1st day of December, 1870, with an attendance of 38 pupils—22 girls and 16 boys; the pupils' ages ranging from eight to eighteen years. The average attendance up to this date has been 27, mostly boys. Considerable trouble has been experienced in inducing the children to attend, especially since the close of winter, and it was found necessary to give them one meal per day, as a reward for those who attended regularly. The studies so far have been Webster's Spelling Book and McGuffey's First Reader, and some few have received lessons in writing. On the whole, the experiment has been to me a very satisfactory one, and the school should certainly be continued, as many of the children are really anxious to learn.

I would respectfully suggest that a male teacher be employed as principal.

I am, sir, your obedient servant,

H. L. CLIFFORD, *Principal.*

J. E. TAPPAN, Esq.,

*United States Indian Agent, Fort Berthold Agency.*

No. 92.

GRAND RIVER INDIAN AGENCY,  
*Dakota Territory, September 9, 1871.*

**SIR:** In accordance with instructions, I have the honor to make the following annual report of the state of affairs at this agency:

The Indians of the Sioux or Dakota Nation, belonging to this agency, are the Onchapapas, Blackfeet Sioux, Lower Yanktonnais, and Cutheads, or Upper Yanktonnais.

The following is the number of lodges who have been drawing their supplies from here, viz: Onchapapas, 340 lodges; Blackfeet Sioux, 230 lodges; Lower Yanktonnais, 365 lodges; Upper Yanktonnais, 190 lodges. There are, besides, some twenty lodges of Sans-Arc Sioux, &c.

I am fortunate in being able to report a most satisfactory state of affairs as existing at this agency. During the past year the good behavior of these Indians, who, but three years ago, were leading a shiftless, nomadic life, has been unparalleled. These Indians have latterly become convinced that the white people here are their friends, and those belonging to this agency are now as safe when out in the Indian encampments as within the inclosures of the military, which adjoin the agency buildings.

Two clergymen of the Catholic Church, sent up by the revered Indian missionary, the Rev. P. J. De Smet, S. J., have been laboring here this summer among the poor untutored savages, and though their success so far has been limited, yet their influence appears to have had a most beneficial effect.

The Jesuit fathers referred to have erected, at the expense of their society, a church and school-house, and next spring the fathers intend returning to renew their efforts toward accomplishing the Christianization of these people. Any progress in this work must necessarily be very slow among these bands of Sioux, who, up to three years since, had devoted their whole lives to warfare and the chase.

The Lower Yanktonnais Indians, under their head chief, Two Bears, have been farming this year, and cultivated nearly 200 acres of corn; also, a few acres of squash and pumpkins, on the eastern side of the Missouri River, about forty miles above the agency. The farm yielded a most abundant crop, and these Indians feel greatly elated at their success this year, and are prepared to enter extensively into farming next spring.

The Blackfeet Sioux also cultivated one hundred acres of land, which I had broken up for them near the river Moreau, about twenty-five miles below the agency, on the west side of the Missouri River, and they also had a most successful yield from the corn which they planted.

The character of the soil in the vicinity of the agency is not adapted for agricultural purposes, and the river bottoms which have been planted this year are the only available places, with the exception of Standing

Rock, a point about fifty miles above the agency on this side of the river. The Upper Yanktonnais wish to farm at this spot next spring, and I have recently inspected the ground, and found it the most desirable land for the purpose that I have ever met with on the river. I have also to report this point on the river as being admirably adapted for an agency site, having an excellent landing for steamboats, and an extensive forest of timber directly above it.

Since the establishment of this agency, three years since, the river has washed away the bank in front of the agency buildings to a very considerable extent, and at the same rate, another year and a half will leave the agency warehouses on the river bank to inevitably fall in.

I have constructed, this summer, an excellent residence for the occupation of the agent, and am now finishing several other buildings for agency employes, and for carpenter's shop, blacksmith's house and shop, &c. The buildings here, before this work was begun, were miserable shanties, which afforded no protection from the inclemency of a winter in this section of the country. All these buildings have been erected by the regular agency employes, and the lumber for these purposes had to be rafted down the river about twenty-five miles.

The annuity goods received this year gave great satisfaction to the Indians, both as to quality and quantity. The article of duck or lodge-cloth among the Indian annuities was the source of universal rejoicing, many of the Indians here having no teepees fit to live in. Their skin lodges are all fast wearing out, not being replaced, now that the majority have abandoned the buffalo hunt; in fact, the Indians were compelled to abandon it, as no buffalo whatever can now be found within four hundred miles of this agency.

The expedition of troops which recently left Fort Rice, accompanying the surveying party of the Northern Pacific Railroad, has caused considerable agitation among the Indians around here.

I have no fears that any of the Indians belonging to the agency will attempt to interfere with the expedition, but the Indians seem to think that those composing what is known as the hospital camp, and now encamped in force near the Yellowstone, at Tongue River, will make an attack on it, and the agency Indians fear that the blame may be put on them. I have so often explained this railroad business to the Indians belonging to this agency, and discussed the matter with them in councils, that they have become reconciled to the project. These people say that they have become accustomed to the "tame buffalo meat," and the other articles of the white man's food provided for them, and that all they have comes from the white man, and they have made up their minds to live like the whites in future.

Everything promises well with the Sioux Indians here; since they signed the treaty under which they were located at this place, over three years ago, peace has faithfully been preserved by all the chiefs and their bands who bound themselves thereto.

I have the honor to be, sir, very respectfully, your obedient servant,  
J. C. O'CONNOR,  
*United States Indian Agent.*

Hon. H. R. CLUM,  
*Acting Commissioner of Indian Affairs, Washington, D. C.*

## WHETSTONE AGENCY,

*Big White Clay, Dakota Territory, September 1, 1871.*

SIR: In compliance with the regulations of the Indian Department, I have the honor to submit this my first annual report of the condition of affairs at this agency.

At the date of my taking charge of these Indians, (November 18, 1870,) Spotted Tail, with other bands known as Brulés, numbering over 300 lodges, had permission from my predecessor to move on White River, the better to protect themselves from the extensive whisky traffic carried on on the Missouri River, and to find good grazing for their ponies. They were under charge of a sub-agent, by whom their provisions were issued, which were forwarded from the agency under contract.

I am happy to state that the whisky trade has been entirely suppressed. On December 26 over eight barrels of liquor were seized and delivered to the proper officer to proceed against by libel in the proper courts. Since then no Indians have been seen drunk or disorderly.

The material for lodges asked for in winter did not arrive until March 1, but was still in good time to protect the Indians from the severe storms prevalent here in early spring.

Having received instructions to remove the agency, in accordance with a promise made to these Indians while in Washington the summer previous, I made the necessary arrangements, and started from the Missouri River on the 1st of June, 1871, with the Indians and train of supplies for the new home. As the selection of a location was left to Spotted Tail and the other chiefs and head-men, I allowed them to guide me to the point chosen—Big White Clay—which was reached on June 24. The country for miles around was suffering from a severe drought. Under favorable circumstances the land, which appears of good quality and unlimited extent, will furnish farms to more Sioux Indians than will, in my opinion, ever settle down as farmers, and become industrious tillers of the soil.

Two warehouses for the storing of supplies have been erected, two more, in the course of construction, will be necessary, after which other buildings needed will be erected by the present force of employés.

These Indians, with the exception of Spotted Tail's band, are quiet and contented, and desire to make a trial of farming; they claim, with some justice, that the promise to be furnished with wagons, horses, and farm stock should now be fulfilled, that they may endeavor to carry into effect what the Government most desires, viz: "Make an effort to subsist themselves."

A school was established the 1st of January last, by Mrs. Hattie Washburn, under the direction of the Episcopal Missionary Society, the success of which was most flattering. It was discontinued on the removal of the agency.

Very many of these people are making rapid strides toward civilization, and if proper assistance is rendered I am encouraged to say the progress in that direction will justify the expectations of the Government.

Very respectfully, your obedient servant,

J. M. WASHBURN,  
*United States Indian Agent.*

Hon COMMISSIONER OF INDIAN AFFAIRS,  
*Washington, D. C.*

## No. 94.

## CHEYENNE RIVER INDIAN AGENCY,

*October 9, 1871.*

SIR: I have the honor to submit this my first annual report as agent for the Two Kettle, Minneconjoux, Sans Arc, and a portion of the Black-foot bands of Sioux Indians of Dakota Territory.

On the 31st day of March last I relieved my predecessor, Mr. J. Lee Englebert, and assumed the duties of agent on the day following. The general condition of the agency could hardly be worse than I found it. The engine, saw and grist mills, shingle-machine, &c., were down and scattered in different directions, more or less broken and sadly abused. The mowing-machine was worn out and has proved worthless. The other implements of husbandry were not so bad. The wagons were more or less broken and out of repair. Much of the harness was worn, cut, and portions missing. Tools of various kinds scanty and nearly worn out. No horses fit for use; no mules; and but four yoke of thin oxen. The beef-cattle were on the opposite side of the river and, I was told, could not be crossed until later in the season. The subsistence stores were at a low ebb, and soon gave out entirely. Added to these difficulties were those pertaining to the location and to the construction of the agency. The location presents many discouraging features. That of the greatest magnitude is the encroachment of the river upon its bank, rendering it necessary at certain times to remove the buildings from front to rear for safety, which process, from present indications, must continue until the agency is removed to a permanent location. Another difficulty arises from the tendency of the Missouri (which is very broad at this point) to form "sand-bars," or long islands, dividing the river in front of the agency into two large streams, with no communication between them except at considerable distances above and below, which renders the ferrying (made almost constant by the frequent passing and repassing of the Indians) both arduous and expensive. A further difficulty grows out of the fact that the bottom upon which the agency rests has become almost entirely destitute of timber, and the obtaining of saw-logs and firewood has become laborious and costly.

The buildings are few in number, of the roughest and cheapest description, faulty in construction, and bad in condition. They are "inconvenient, uncomfortable, and unsightly." They harbor thousands of vermin, the ravages of which upon the subsistence stores are immense. The space inclosed has, by the falling in of the river bank, become too small, and the military and agency buildings are too closely packed, so that the necessity for rebuilding and reconstructing almost equals that of removing. A survey of the field appeared to reveal the fact that there was everything to do, and but little or nothing to do with.

Spring was rapidly passing, and no preparation had been made for farming. The places selected by the Indians for this purpose had special reference to security against incursions of the "hostiles," and were wide apart, the extremes being some forty miles or more distant from each other, and some twenty to twenty-five miles from the agency, enhancing to an almost intolerable degree the difficulty and labor incident to the business of the agency. So far as possible, I supplied the deficiencies and succeeded in plowing and preparing about 160 acres of land, in parcels varying from 5 to 60 acres, which were subdivided by the Indians into many smaller lots. I furnished them with corn, potatoe, pumpkin, squash, and melon seeds, all of which, except the potatoes, were planted and produced splendid crops, which delighted them and "made their

hearts glad." I intended to open a large agency farm, and started our plows for that purpose, but one of the Minneconjoux chiefs stopped them and forbade me from proceeding. The fact was immediately reported to me, and I at once sent for the chief to come and explain. He was prompt in both. He objected because he feared the "hostiles" might destroy our crops, and the friendly Indians in consequence be unjustly blamed. I made another attempt about twelve miles below, and the same objection was raised, in consequence of which I abandoned the intention for the present year. My larger experience in Indian habits, however, inclines me to believe that a "feast" would have dissipated the objection. I regret the circumstance, for the past season has been remarkably propitious. Fine crops, I doubt not, would have resulted, and opened the eyes of the Indians to the possibilities of the soil under favorable circumstances and good cultivation.

We have erected a stable 30 by 100 feet, the walls of which are covered with 1½-inch plank and battened, and the roof shingled. It is divided into forty-two stalls and two rooms 12 by 16 feet each, affording protection against the severity of our winter weather to all our stock, a provision called for by both humanity and economy. Our engine, saw-mill, grist-mill, and shingle-machine have been thoroughly repaired and put up in the best manner, to which I have added, to be moved by steam-power, a cross-cut saw for sawing shingle-bolts, firewood, &c., and a hay-cutter for preparing "chop-feed." These various machines cluster around the engines, and present to the Indians an exhibition of mechanical ingenuity and a scene of industry rather imposing, exciting, and instructive to many of them.

We have cut about one hundred and twenty tons of hay, which we began to feed from in August; burned about two hundred bushels of charcoal; supplied the agency and some of the Indians with fuel; cut, rafted, and sawed between three and four hundred logs; hauled cordwood, logs, and fencing stuff for the Indians; built them boats; repaired their wagons, guns, pistols, &c.; built them corrals, cabins, and made constant repairs to the agency implements, keeping our force constantly upon the stretch.

Belonging to this agency are some six thousand Indians, a considerable number of whom seldom, and some never, visit us, preferring the hostile camp. Representations from most of the different bands of the Sioux are constantly here, and from some in very considerable numbers, increasing the demands upon our subsistence stores very sensibly. When I first reached here I found the Indians, as a body, fault finding, dictatorial, and turbulent. I immediately made my appreciation of the better behaved manifest, treating them all, however, with proper consideration and kindness, but with firmness.

I have endeavored to promote their comfort and happiness by every proper means at my command, and to teach them to act from moral and religious principles. I have seldom made promises, and have most scrupulously kept those I felt obliged to make. I am gratified in being able to say that a marked improvement, in my opinion, has taken place in them, and that they are (with some exceptions, of course) good Indians. They will compare favorably, I think, with a like number of uneducated white people. There is, in my judgment, less immorality and crime in this Indian settlement of several thousands than in almost any town or small city of white people of corresponding numbers.

The Sioux Indians possess active brains and great native intelligence, and, like other people similarly organized, should be kept employed at some congenial occupation. They will not, like the brute, be content

merely to eat and sleep; they must have employment of same kind. They dislike consecutive labor, and, in the absence of that kind of occupation which is suited to their tastes, they will indulge in their war and other dances, their games, horse-racing, &c., which leads to extensive gambling among them.

They are not far enough advanced in civilization to fancy farming operations; they are distasteful to them. The stride from the exciting chase to steady, plodding farm-work is too wide to be made at one bound, and, as it appears to me, should not be expected of them. In giving up the chase, stock-growing would seem to be the most natural occupation for them to engage in. This, as an intermediate step to agriculture, would render the transition easy and pleasant. It might be objected that the hostile Indians would steal and run off the stock, but it would be no more than the cattle sent here to feed them, if so much. The solution of this Indian problem interests me most deeply, and has induced me to throw out this hint, which I trust may meet with such consideration as it may be deemed worthy of.

Before closing this report, I beg most respectfully to recommend again that the agency be removed to some suitable location. I know of no better site on this side of the river than that, previously recommended in my report of 29th April last, located just below Fort Sully. Peoria Bottom, some fifteen miles below Fort Sully on the east and same side of the river as the fort, is really, from all I can gather, the very best location to be found within a range of very many miles, but that in fitness and desirableness is the one suggested. Twenty thousand dollars, if honestly and properly applied, it is calculated will remove what is worth removing from here, and construct a new agency on the proposed site with all the necessary buildings and appurtenances, including schools and missionary buildings and their appendages.

Very respectfully, your most obedient servant,

THEO. M. KOUES,  
*United States Special Indian Agent.*

Hon. E. S. PARKER,  
*Commissioner Indian Affairs, Washington, D. C.*

---

No. 95.

SISSETON AGENCY, DAKOTA TERRITORY,  
*September 9, 1871.*

SIR: I have the honor, in compliance with the requirements of the Indian Department, to forward my annual report of the condition of the Indians on this reservation.

The farming interests of these people have been well advanced by the liberal supply of agricultural implements and the close attention of men to instruct them in their use. Beside cultivating 500 acres of old land, prepared within the last two years, they have added new 5 to 20-acre fields by breaking land—in the aggregate, 220 acres. This new land is intended for wheat, as most of them have corn-land enough. It was with difficulty at first that they could be made to comprehend the advantages of raising mixed crops, or that they would be able to do the work, but after much urging they became interested, and many of them were very anxious to do what was required of them to secure a field. The men most energetic and willing, with the least murmur, to take

hold and try to do as required were those that knew nothing of farming two years ago. The reward of their industry, for the time being, is the stimulus to their advancement, which I hope to keep up by the show of a good wheat crop another year.

I required each farmer to break a field of five acres or more. This has made the farm a place to instruct the young men in agriculture, which is of the utmost importance in the civilization of Indians, as it dispels their illusion of happiness by chase or strife, excites their instincts of self-preservation, stimulates a desire for gain, and makes them peaceable, happy, and contented.

The protracted drought and grasshoppers this season have destroyed the greater portion of their crop. All garden vegetables are entirely destroyed. This has produced a feeling of distress, but they hope by work not to suffer for something to eat, and I have assured them they would be provided for if they tried to help themselves.

They have secured all the hay required for the use of their stock the coming winter, and those who have oxen have it stacked at their stables. In this climate it requires much labor to put up the large amount of hay necessary, but they are fully equal to the task if they have oxen and cows to feed it to. They are not willing to put it up for their ponies, though they have done so when told to. This comes from an idea that they keep better if allowed to take care of themselves.

The addition to the warehouse, 20 by 30 feet, of logs, was completed last fall, and a lodging-house 15 by 25 feet, built of logs, was also put up. Steam saw and grist mills have been set up and put in operation this summer. The cost of the mills delivered at the agency was \$2,904 60. I hope to have them housed before winter. Fifty thousand feet of lumber have been cut out from logs got out by the Indians, which has been used to make their houses more comfortable. Many more logs would have been hauled had they felt confident of having a mill. The grist-mill was set running last month grinding the corn on hand to exchange as required and issue to the poor. These mills are of great importance to the Indians, and have done much to make them feel that this reservation was to be their home. They have built for themselves forty-three log-houses, which should be roofed and floored as soon as lumber is sawed out. This can be done at an expense of not over \$125 each. Stoves are furnished them in payment for labor and produce, as they are a great incentive to their putting up a house and securing a permanent home, where, I am pleased to say, they have shown a good deal of alacrity in gathering about them cows, pigs, and fowls, and other little comforts that become necessary as they advance in civilization.

To find out the quality of clay and learn the expense of manufacturing brick with Indian labor, I have had a brick-yard made, and a kiln of one hundred thousand is ready to burn. The clay works well, and promises a very superior quality of brick, at a cost of \$12 per thousand, including expense of yard. They can be made for \$7, with all Indian labor but the man in charge, which will be cheaper to build with than wood. Timber would last but a short time here, to be cut off for building purposes.

During three months of the past year three schools have been in operation, at an average daily attendance of 50 scholars. The most industrious class of these Indians, who are better provided with the comforts of life, are much interested in the attendance of their children, and would keep them at school five months in a year, but the greater portion are indifferent after the novelty of the first two months. As they become more prosperous they are more independent in their individual

rights, more intelligent, and better prepared to receive instruction, and show a greater interest in the welfare of their children, as well as their own spiritual wants.

I send with this the report of Mr. W. K. Morris, teacher of the school under the charge of the Presbyterian Mission.

The Indian farmers are those who have given up Indian life and taken 160 acres of land to improve for their individual benefit. These men, and those dependent on them for support, number at the present time 734 souls. Their labor, taken at prices about the same as whites receive for the same work, for the year ending June 30, 1871, amounts to \$21,434 24; and the produce, delivered at what it is worth to bring it here, \$1,139 28, making a total of \$22,563 62. In exchange they have received in payment merchandise at cost of delivery at the agency, \$15,972 39, leaving a balance in their favor of \$7,591 43. Be sure they are paid for doing work for themselves, but they are the poor wards of Government and would have to be provided for or allowed to starve, and this labor is a sure guarantee that the means advanced will be returned in their being producers, and requiring a market for their surplus supplies. Within two years, with the same advancement they have made the last two, they will have more grain than will be required to subsist all the Indians on the reservation, provided no scourge prevents, as it has this season.

The health of these Indians for the past year has been better than at any time before, since the outbreak of 1862. Infancy and old age furnish the larger number of deaths. Between the ages of 15 and 40, three-fourths die of consumption, or acute pulmonary disease. Chronic diseases of the lungs become more common as they advance in acquiring the comforts of civilization. This may be accounted for in the radical change that takes place in their habit of living when they throw aside their blanket. From the open field, the chase, and the aired tent to their ease in a close log house; the wild meats and grosser vegetable food to the more concentrated and salt pork, are the causes of their physical degeneration in this transitory stage. The influence of the mode of living on persons thus afflicted is so well known among the Indians that they are taken out into a tent, and moved about from place to place, to subsist upon wild meat entirely. I have noticed in many cases it has had the desired effect—to stay the progress of the disease. Those diseases spread by the loathsome vices of more civilized society are seldom met with among these Indians.

Joining the reservation on either side are about 250 Indians (the greater part belong here, and the others at Devil's Lake) who, rather than comply with the requirements of Government, or the wishes of the chief and head-men, stay outside to retain their tribal habits. They plant in old fields, are peaceable, and not disposed to interfere with the farmers here, any further than to beg for supplies when starving, and divert the minds of the young men with their dancing. I have not considered it advisable to render them any assistance unless they will give up their old habits and live on the reserve.

The appointment of an agent at Devil's Lake was very gratifying to these Indians, as well as those at the Lake. It took away from this reservation the indolent portion of those that belonged there, who had been living here on the charities of the industrious, and adhering to their old ways.

Emigration is fast settling up the country around the reservation, so that in a short time these people will be isolated among the whites. Railroads are pushing past on the north and south, and a preliminary

survey for one has been made through their country. This close proximity of the two races has made it necessary that I should restrict their leaving the limits of the reservation without a pass. They have a good police force of twenty-five men, whose duty it is to prevent the introduction of liquor, either by whites or Indians; and their diligence so far has prevented any trouble from that cause or any other, as they have, by my request, been furnished with arms, by order of Major General Hancock, commanding Department of Dakota, which has placed them in a condition to be ready to protect the frontier, as well as themselves, from the incursion of war parties from the hostile Sioux on the Missouri. There is no doubt but what the knowledge of this by their enemies has had a salutary influence to prevent raids in this direction, as they have not formed any hostile parties for this country the past year.

This nucleus of Santee Sioux, having given up their Indian life, and trying to better their condition, have been heard of by their brethren west, and it is having its influence for good, as I have reason to know from conversation with parties that have visited these people from the several agencies on the Missouri to see what was being done for them, and learn the best course to pursue. That they may continue to persevere in well doing, I would recommend that the sum of \$50,000 be appropriated for the year ending June 30, 1873, to be expended as contemplated by the treaty. They are peaceable, industrious, and rapidly advancing toward self-support, which, with assistance a few more years, will make their ability to do so a certainty. The loss of their crops will make it necessary to increase the amount of supplies estimated for April 26 at least one-half to meet their necessities. I would also request that a sum of \$5,000 be appropriated, to be used in erecting agency buildings that are required to protect the Government property, supplies, and stores of grain, and to build school-houses, as both are much needed.

I am reminded by the chief and head-men that it is their wish that the amount of land required to be under cultivation and fenced by the treaty be reduced one-half at least. I would earnestly recommend this change, believing it will be much to their advantage, and make them feel that their object of ownership is more attainable.

Herewith I transmit agricultural and educational statistics, as correct as circumstances will allow.

Very respectfully, your obedient servant,

J. W. DANIELS, M. D.,

*United States Indian Agent.*

COMMISSIONER OF INDIAN AFFAIRS,

*Washington, D. C.*

GOOD WILL, DAKOTA TERRITORY,

*June 24, 1871.*

SIR: In concordance with what I understand to be an old custom, I send you the following report of the school at Good Will. The school-building and dwelling-house at the mission were erected during the summer of 1870. In the first week of November a school was opened, which was continued until the 1st of March. During November and December the school-roll contained eighty names, but the largest attend-

ance during the time was only forty, and the average not quite thirty. The population in this part of the reservation is smaller, and the majority of the scholars came a distance of from three to five miles. Their attendance was quite irregular. This made it impossible to organize and carry forward regular classes.

The teaching has been both in Dakota and English. The mission think that it is much easier to teach our English after he has learned to read in his own language, and then he has advantage of that, if he never makes himself master of the English. The most advanced scholars were kept in writing and arithmetic, and a small class of them recited in a primary geography. While it is not difficult for an Indian to learn to pronounce our language with so much correctness as to be readily understood, it is a much greater undertaking to learn to understand it. To enable them to understand the English they read, they were required to translate each lesson into Dakota. This of itself is a good educational process. A number of young men and a few young women made commendable progress in these exercises. It is intended during the present summer to fit up our school-room with desks and other modern appliances, so that in the future the school may be made more what it is intended to be—a high-school for this community.

Yours, respectfully,

WYLLYS K. MORRIS,  
*Teacher.*

Dr. J. W. DANIELS,  
*Agent of Wahpeton and Sisseton Dakotas.*

No. 97.

FORT TOTTEN AGENCY, DAKOTA TERRITORY,  
*The Devil's Lake Reservation, September 30, 1871.*

SIR: I have the honor to submit this, my first annual report, in accordance with circular from the Indian Office dated June 10, 1871, as follows, to wit: Upon my arrival to take charge of this newly-established agency, on the 4th day of May last, I found the Indians on the reservation very much pleased at being favored with an agent dispatched hither by their Great Father to take charge of their interests and promote their welfare. These wild and untamed creatures were in a state of destitution so far as clothing and food were concerned, owing to the entire failure of the buffalo, upon which they were accustomed, for the most part, to depend. I proceeded to supply their wants, under the direction of your office, as speedily as practicable, so far as I had the means to do so, taking into consideration the remoteness of this locality from the sources where articles necessary for their comfort were obtainable. It has been my aim and constant endeavor, since my arrival, to inculcate upon these savages the necessity of their accommodating themselves to the dress and habits of the whites, especially as the scarcity of game admonished them that their only sure resource against want of sufficient food was in the cultivation of the soil, and the production of cereals edible by a systematized mode of labor. Some of these people have, in past years, raised corn to some extent, while they dwelt in villages on the shores of Big Stone Lake, previous to the Sioux Indian outbreak of 1862, but so much time has elapsed since they were driven to the wide prairie of the Northwest that they seemed to have aban-

done, until lately, all attempts in that direction. Most of them now express a desire to till the earth and to adopt the advice so earnestly pressed upon them; as an indication of their good intentions they have applied themselves more or less diligently to planting corn, potatoes, and other seeds in the fields, in spite of the difficulties they had to contend with.

I found, on my arrival here, a great necessity for every description of tools, farming utensils—in fact, there was nothing here by which they could till the land with any degree of success; and the scarcity of seed-corn was a source of discouragement, but it transpired many of them had hid away seed, which they were induced to divide with their neighbors. With this and about forty bushels of potatoes procured at Fort Abercrombie, and some turnip-seed turned over to me by the Quartermaster Department, United States Army, a considerable crop was secured. The Indians evinced much zeal and industry, for, in many instances they used their hands and an old ax in planting, for the lack of proper tools.

The number of Indians on the reservation at the present time is about seven hundred and thirty-two souls, being a considerable increase since the establishment of a regular agency. The annuity appropriated by Congress for their support has been applied in the most judicious and economical manner, and they are now comfortable. I have sent messages to straggling families and individuals belonging to the bands, inviting them to come here and join their kindred. A considerable augmentation to the numbers now on the reservation next spring may reasonably be anticipated. The example of those who have complied with the wishes of the Government, by locating themselves upon the land allotted to them, will exercise a potential influence upon the nomadic bands of the prairie.

The land planted during the past season amounts to over 100 acres in extent, and enough has been done to encourage the worker and justify them in hoping for better success next year. There have been raised, approximately, about 1,500 bushels corn, 500 bushels potatoes, and 1,000 bushels turnips. The Indians have cut and split over 10,000 fencing-rails, and many of them are in fence; over 200 tons of hay has been cut and secured; and I hope to have some 20 log-houses built before winter. The logs are cut by the Indians, and they have quite a credit to their individual accounts, to be paid for in winter clothing.

It has not yet been possible to furnish instruction to the adults and children attached to this agency, there being no buildings erected as yet of any kind. The warehouses used for storing the supplies, as well as the house used for the employes, are old buildings, covered with earth, formerly occupied by the troops while building their new quarters. I have been permitted, with my family, by the kindness of the military authorities, to live in quarters inside the fort. It is of course impracticable to invite missionary teacher until proper buildings can be erected for schools, and for purposes of public worship. It is to be hoped that these difficulties and differences will not long exist, and that another year will insure the inauguration of a system of education for these poor creatures which will tend to encourage them to avail themselves of its benefit. It must, however, be borne in mind that these Sioux or Dakota bands, are among the wildest of the prairie Indians, and time must necessarily elapse before they are reclaimed from their primitive mode of life, by the exercise of wise and judicious measures on the part of those to whose charge they have been committed by the Government; but as soon as the means are furnished to establish, permanently, mission-sta-

tions and school-houses, and they are offered the advantages of religious teachings, they can readily be weaned from the degrading influences of heathenish superstitions and practices.

The soil on the reservation is generally good and fruitful, the principal drawback being the early frosts in this high latitude, which retard or destroy vegetation prematurely. But for this fact there would be no difficulty in raising the small kinds of maize, or Indian corn. Wheat, oats, and barley can be cultivated with more certainty, these cereals not being liable to be affected by ordinary frosts. How far garden vegetables can be produced is for the most part unknown, and is a problem yet to be solved. I propose next spring to make a fair experiment in order to ascertain what kinds of grain and garden products can be depended on to arrive at maturity during the short season of this parallel.

There are occasional visitations of grasshoppers both in this and the Red River region, where they swarm so numerous as to destroy about every green thing, but sometimes years elapse without such invasions.

I would respectfully recommend that a sufficient appropriation be made to carry out this good work now so happily inaugurated, and that the appropriation be made separate from that of the Lac Travers reservation, so that the amount intended for this reservation being known in advance, arrangements for a corresponding judicious expenditure in improvements may be made. I would respectfully recommend that a steam-engine for sawing lumber and grinding wheat, corn, &c., such as the one now used by Agent J. W. Daniels, be purchased for this agency, and that authority be given me to enlarge the farms and to sow wheat, in which case much might be saved to the Government. It will be necessary to have the means on hand to sustain the straggling bands now returning; they have to be fed and clothed, coming in, as they must, completely destitute. I am glad to find that the wilder Indians who have come in evince more determination to work and help themselves than such as have been hanging around the different agencies for several years. They seem to feel that this is now their sole opportunity to earn their food and clothing; otherwise they must starve or freeze. None except the infirm and sick receive anything from the agency stores, unless as an equivalent for labor performed. I have young men at work, under leaders or foremen, cutting logs for houses, cord-wood, &c.; in fact, they seem actuated by an industry which is highly commendable. I would respectfully call your attention to the necessity for agency buildings, which should be erected as soon as possible in an economical and substantial manner. There is no lack of material for manufacturing brick and lime; stone can be had, and pine lumber procured at Fort Abercrombie for a reasonable price.

From my experience thus far I am convinced that a comparatively small expenditure on the part of the Government will insure the collection, upon this reservation, of a large number of Sioux in addition to the present number, all of whom may be gradually but surely led to adopt the dress and habits of the whites.

It is certainly important, not only to the welfare of these poor creatures themselves, but to the Government, that they be placed speedily beyond the reach of want, and thus preserved from the temptation to commit depredations on our frontier settlers. By judicious measures they may be transferred from wild and dangerous foes into a peaceful, agricultural people, restrained and governed by Christian precepts and principles.

I would respectfully represent that, to effect what is indispensable in the way of permanent improvement, the sum of \$35,000 is required in

addition to the amount which will be necessary for the erection of agency buildings and the purchase of a steam portable mill.

I have the honor, sir, to be, very respectfully, your obedient servant,

WM. H. FORBES,

*United States Indian Agent for the Sisseton and  
Wahpeton Bands of Sioux of the Devil's  
Lake Reservation, Dakota Territory.*

Hon. H. R. CLUM,

*Acting Commissioner of Indian Affairs, Washington City, D. C.*

No. 98.

OFFICE OF INDIAN AGENT,  
*Lapwai, Idaho Territory, September 1, 1871.*

SIR: I have the honor to transmit this my first annual report as United States Indian agent for the Nez Percés Indians.

I assumed control of this agency the 24th day of April, 1871. My predecessor, Captain Sells, not being present to turn over to me, I commenced taking an inventory of all property which I could identify as belonging to the Indian Department.

This reservation, as near as I can judge from the map, contains about twelve hundred square miles, the greater portion of which is totally unfit for agricultural purposes, being high table-land and liable to early frosts and destitute of water.

The agricultural portions are confined to the valleys along the Clear Water and Lapwai and their tributaries, and the Kamia, together with patches of from ten to forty acres scattered along the base of the mountains, where springs are to be found.

The table-land is good for grazing purposes and affords plenty of grass for the Indians' stock, unless killed out by the drought or eaten up by the crickets.

The grist-mill at Lapwai has ground during the past year 4,011 bushels of wheat, and 250 bushels of corn. The one at Kamia 3,500 bushels of wheat and 150 bushels of corn. Both mills need some machinery to make them first-class mills.

The treaty portion of the tribe are very friendly and much pleased with the new policy adopted by the Government for their improvement and civilization.

That portion of the tribe comprising the young men just coming on to the stage of action are very anxious to be taught the ways of the whites, and are opposed to having their language taught in the schools, which they were afraid of when they learned that there had been 1,000 copies of the New Testament printed in their language. I assured them that it was the policy of the Government to teach them the English language, also the agricultural and mechanical arts, so that when the terms of the treaty expired they could do their own talking with the whites, and, by being industrious, could sustain themselves in a respectable manner.

The non-treaty portion of the tribe reside outside the reservation, and very few have been here since I have had charge.

Eagle from the Light's band (non-treaty) have been gone to the buffalo country for two years, and he took quite a number of other bands with him. I learn from some who have come in that they are all on

their way back, having been badly whipped by the Sioux, losing most of their horses.

There are about 1,100 acres of land cultivated by the Indians. The products of the past year have been good in quality and quantity, both in grains and vegetables, on the Kamia, especially. The crickets destroyed most of the gardens on the Lapwai and its tributaries. From the same cause some of the Indians have lost their entire crops, and will need assistance until another crop is raised.

The schools are located one at the agency and the other at Kamia, each numbering about 30 scholars. The only way the Indian children can be taught successfully, in my opinion, is to take them entirely away from their parents so that they will not hear their native tongue spoken. By so doing I think they would learn with less trouble, and after a short time would be more contented with the change of their mode of living, whereas if they are allowed to run home every day or two they keep up their Indian customs in part and consequently make very little progress.

In my report of the condition of buildings dated April 26, 1871, I wrote as follows, in regard to school-houses: "I estimate the cost of furnishing the school-house at Lapwai at \$1,000," which sum will be necessary to complete it. The building is intended for boarding and lodging the children. The lower room I use for school although it is not finished. The school-house at Kamia is too small, being only 18 by 24 feet; the Indians complained of it the last time I visited them as not coming up to the requirements of the treaty.

One great evil among the Nez Percés, (which is a failing among all tribes of Indians,) is their thirst for intoxicating liquors; it is next to impossible to prevent its being sold to them. A jury can scarcely be found that will convict a man on Indian testimony. The Indians go to Oro Fino and buy whisky by the gallon, get drunk, and frighten some one or run off some cattle, and then, in all probability, some of the very ones who let them have the liquor come to the agency with complaints with regard to depredations committed by the Indians while drunk. There are many white people living along the line of the reservation who are continually annoying the Indians and make trouble. Still there have been no serious outbreaks. The Indians on the reservation, with the exceptions already indicated, are quiet and peaceable. Previous to the announcement of the result of the Indian council held August 9, 1871, on the Umatilla reservation, there was some excitement and anxiety felt by the Nez Percés. They considered that the removal of the Umatillas would be the precursor of their own removal, to which they are very much opposed. But when it was known that the Umatillas would remain they regarded their own prospects as more favorable and hopeful. Forced removal from lands that have been secured them by treaty, and with which their longest and tenderest recollections have been associated is fatal to all efforts to improve and elevate the Indians. They must be made to feel that the tenure by which they hold their lands is as sacred as that of the white people.

Very respectfully, your obedient servant,

JNO. B. MONTEITH,

*United States Indian Agent, Nez Percés Indians, Idaho Territory.*

Hon. E. S. PARKER,

*Commissioner of Indian Affairs, Washington, D. C.*

No. 99.

OFFICE BANNACK AND SHOSHONE AGENCY,  
*Idaho, September 1, 1871.*

SIR: In compliance with instructions received at this office I have the honor to submit the following annual report:

Owing to the many changes of agents which have taken place since last October, and the short period of time which I have had the honor to occupy the position of agent on this reservation, the report must necessarily be drawn from such facts or information as I have been able to gather, connected with other material, as have appeared from time to time during my brief residence here.

The statistics of Indian population, property owned by them, and property of the Government, will be found in detail in accompanying returns, furnished by the Department of the Interior for such purpose; other statistics, which it is necessary for the Department to know, that the wants of this people may be treated intelligently, I conceive it to be my duty to furnish. With such intention, permit me to lay before you the following:

## THE RESERVATION.

Colonel Floyd-Jones, former superintendent of Indian affairs for this Territory, in his excellent report for the year 1870, says: "The chief characteristics of the country are immense barren sage-plains, thoroughly unproductive, and furnishing subsistence neither for the white man nor the Indian." While Colonel Floyd Jones's general description of the country is, in some respects, applicable to this reservation, it is only partially made up, and not sufficiently comprehensive to give the Department such information as is necessary for the complete understanding of the situation, viz:

The highest portion of this reserve is not less than 8,000 feet above the level of the sea, and that part of it where farming operations are carried on with partial success is at the immense elevation of 5,400 feet above tide-water, and the Fort Hall bottoms, celebrated for their production of grass, and depended upon for cattle range during the winter, are some 200 feet lower in the scale. These bottoms, so far as known, are ineligible for farming purposes, for the reason that they are subject to overflow during the months of May and June, and more especially subject to severe frosts during the months of July and August, while portions of the upper plain are partially exempt therefrom, generally from the 1st of June to the 15th of August.

Were it not for the exceeding dryness and rarity of the atmosphere—the wet bulb uniformly showing a difference of from 28° to 30° of dryness, which fact is extraordinary of itself—so low a degree of temperature would undoubtedly prevail that the country would be uninhabitable.

## RESIDENT INDIANS

upon the reserve consist principally of old men and women, widows and their children, men whose physical disabilities deter from wandering about the country, and the Indians employed as farm-hands. The in-born tendency to wander, coupled with the necessity of the agent to grant the Indians long permits of absence, for economical purposes, owing to the insufficiency of appropriations for supplies, has had a tendency to fix the idea among many of the Indians of this reservation that this is a mere refuge for them; a place where, at stated times, they

are to receive clothing and medicine, and, when desirable, or when other means fail, provisions. Having been educated up to this pernicious standard, it will require positive action some time hereafter to disabuse their minds of such ideas.

#### THE BANNACKS,

heretofore under the Chieftain Tyg-gee, have been in, received their annuity-goods, and again departed for hunting grounds near the head of the Yellowstone River and in and about the Wind River Mountains. That portion of the Bannack tribe who claim this reserve as their home could have been induced to remain here permanently and give up hunting as a business, had this agency been prepared to subsist them and fulfill what they understand to be a portion of the requirements of the treaty of July 3, 1868; namely, "that each head of a family is to be provided with a dwelling-house upon such lands, or at such place within the limits of the reserve as he may select." Upon what foundation they base their claim for houses could not be satisfactorily ascertained from them, therefore the presumption is that it was a promise of an agent, which said promise, if so made, to the Indians is equivalent to law to them. During the period these Indians were upon the reserve I became satisfied that a portion of them had either been induced by white emissaries to make demands that would not be complied with, or that these demands were the offshoot of an extensive conspiracy existing among them preparatory to an outbreak. In either event their conduct was not calculated to cement the friendship existing between these Indians and the Government; therefore they were held in council for upwards of ten days, during which time the power, and magnanimity, and resources of the Government were carefully impressed upon them; the futility of a war, should one be made by as few braves as they could bring into the field, or the combined Indian power of which they have knowledge, the distress to themselves, wives, and children which must necessarily follow such action, with all and other concomitant evils which war induces. After several days' repetition of the subject, which was done each day at their request, the council repledged their fealty to the Government, and one sub-chief said "that bad words had been whispered into his ears for a long time, but now his ears were closed and his eyes open."

#### BOISES, BRUNEASUS, AND WESTERN SHOSHONES.

These Indians, under the laudable and politic administration of the Boise Chief, Captain Jim, have increased in number over last year's census from sixty to one hundred souls. The increase has been principally drawn from wandering Shoshones from Cache Valley, Utah, and some few from the northern portion of Nevada. These Indians are more tractable and more industrious than the Bannacks. The majority of them having heretofore lived in the mountains to the west of this reserve, and upon the streams emptying into Snake River, their winter's food being obtained only by continuous labor during the summer months, they have been more readily induced to turn their attention to laborious pursuits, thereby making them more dependent upon the Government than they otherwise would be, since they require instruction in every department of agriculture and mechanical labor. They have also been benefited somewhat by the inroads of the white settlers of Idaho. While their rivers were occupied for mining purposes, and their fisheries destroyed, they found that the whites developed the resources of agriculture, which to them had been a sealed volume.

## DWELLING-HOUSES FOR INDIANS.

Knowing it to be the desire of the Government to civilize these, as well as all other Indians, as rapidly as possible, and knowing by experience that their nomadic tendencies are only perpetuated by their mode of living in tents, if permitted to do so, I would suggest that good, warm, cheap houses be built for families on this reservation. These Indians having no money annuities due them from the Government, it is only from the known liberality of the Government to its dependents and wards that this matter is to be arranged.

Furthermore, the scarcity of timber and the great cost of lumber, other materials and mechanical labor, and the easy demolition of wooden houses, preclude the erection of such buildings. Anticipating all arguments and objections against the success of the object, I had this reservation prospected for building material upon which Indian labor could be utilized; and have to say that there is within the limits of this reserve a large abundance of soft stone, which under the direction of one mechanic could be quarried and dressed by the Indians on the ground. Lime of a low grade and limestone of a superior quality exist in abundance, and combined with the before-mentioned stone are all the materials necessary for house-building, except floors, window and door frames, windows and doors, and roofing beams. Under the direction of the said one mechanic, with Indian labor, the whole thing could be accomplished; and neat, warm, clean, and fire-proof houses can be erected at little cost to the Government.

The agricultural resources of this reservation are limited to some extent, owing to the late and early frosts, and the necessity of irrigation. Cereals and vegetable-roots of every kind, after becoming acclimated, are a sure crop; still the great cost for the first years by which these things are to be obtained causes the most sanguine farmer to despair of eventual success.

Another difficulty to overcome is the scarcity of water on the plains. The stream upon which the agency farm is situate is calculated to furnish no more than sufficient water to irrigate five hundred acres, and at the rate of progress made heretofore, two years hence the whole amount will be absorbed. When that is done, for a further supply of water a canal of large capacity can be brought from the Port Neuf River, a distance of some twenty miles, and some 4,000 or 5,000 acres of rich upland prairie can be irrigated before it reaches the present locality of the farm, and the surplus water can be used in continuation. Another obstacle and most serious evil is the loose manner in which all ditch-work seems to be done—no idea of permanency pervades the work—for the present and not for the future, is the motto; each spring the work of the last past spring has to be done over again, and so we continue to repeat ourselves until at last the continuous drain upon the Treasury wears out the patience of all concerned, and the great expenditure of money is lost, generally by abandonment.

The insect pest of this country is one more obstacle to the success of farming. The flight of grasshoppers and the march of the large brown cricket are watched with more fear by the farmers of the country than the march of legions of hostile men would be the passage of armies would leave something after them, but where the grasshoppers settle during their flight, or where they are hatched, or where the crickets in their march strike a field, other than ripe grain, all disappears. These destructive insects can only be overcome by time.

No attempt has been made since the occupation of this plain to prop-

agate fruit; undoubtedly some of the more hardy varieties might be successfully cultivated.

#### STOCK CATTLE, ETC.

This reservation should be stocked by the Government with not less than 500 cows. Another season should not be permitted to pass without the purchase being made, with a sure winter range on the reserve for 10,000 head, and summer range for twice that number of cattle, with an abundance of herders, who have to be supported the greater portion of the year. The almost complete annihilation of every species of game throughout the country, the rapid occupation of such portions of the surrounding country as are susceptible of furnishing a foot-hold to the settler, with the declared policy of the Government to civilize and restrain the Indians, show the necessity therefor. The economy of the purchase would be fully developed the third year thereafter by the decrease of appropriations required, and, being continuous, another object would be gained, a step toward a self-sustaining reservation.

Another species of stock which should be introduced here is the hog. A small band for stock purposes should be purchased, and they should be handled and herded precisely as cattle. They would be a valuable acquisition toward the subsistence of the Indians, and the only auxiliary that can be depended upon for the destruction of the crickets and grasshoppers.

#### FISH.

The rivers and creeks which rise in this reservation and empty into Snake River, as well as the last-named river and the Blackfoot, supply some fish, but not enough to make fishing one of the industries of the Indians, they only being able to take enough from time to time to supply the immediate wants of a family.

Before the establishment of this reserve by the Government the subsistence of the Boise and Bruneau Indians was principally confined to salmon, both winter and summer. Their removal east of the Shoshone Falls of Snake River having cut off their material supply makes them more dependent on the Government than they otherwise would be, could they take an abundance of fish as formerly.

The Shoshone Falls are some one hundred and eighty miles west-southwest from this agency; the water has an aggregate fall of 280 feet. Great quantities of salmon run annually from the Pacific Ocean to the foot of these falls. The Government could, if considered desirable, bring these fish above the falls by means of salmon-stairs. Any expenditure made in that direction would be the source of an immense annual saving hereafter, and the general benefit to the country would be incalculable.

#### THE CAMAS PRAIRIES,

which are situate in this Territory and lay west, west by north from this reservation about one hundred and eighty miles, are understood by these Indians as a portion of their reserve. On account of the difficulties that originated during the past summer between certain white men who have occupied a portion of those prairies and the Indians from this reserve who were out on the annual camas-gathering expedition, considerable attention has been given to the solution of the controversy.

The treaty chiefs, viz, Tas-to-ba, A-wite-etse, and some others, insist that they specially mentioned the retention of those prairies for the use of their people and the Shoshones. Article 2 of the treaty of July 3

1868, designates "portions of the Kansas prairie countries" to be retained for the use of the Indians. There being no prairies known by that name within the limits of the land covered by the treaty, it necessarily follows that the spelling of the name is a mere clerical error, but is of sufficient importance to give those who make it a business to encroach upon Indian lands a shadow of claim.

The Indians are undoubtedly right in presenting their claim, and all of the head-men and chiefs on their return appealed to me to sustain them in what they consider their rights of occasional occupancy of the camas prairies, and believing them to be correct in their representations, and to save any collisions hereafter between the white occupants and the Indians, I would respectfully ask that the Government take immediate measures to preserve those prairies from further occupancy and destruction by the white men.

#### ANNUITY GOODS.

The treaty with these Indians specifies certain articles to be furnished them for their consumption. Being absolute in its requirements, the goods supplied and issued by the agent, Government is satisfied when that work is completed and proper returns made. The clothing and other material having been placed in the possession of those for whom it was intended it is necessarily soon lost sight of and no further thought given the subject, but presuming that some satisfaction might be derived from knowing through what channel the bountiful issues of the Government flow, I took occasion to note the disposition of much of the goods distributed by myself to the Bannacks during the month of August.

Having been notified that the red flannel issued to the women would be used for horse-trimmings, that waste was checked in advance by informing the men that those goods must be used only for the purpose intended. Their blankets are cut into leggins and breechcloths; sufficient of the calico is exacted from the women to make a shirt of, and but a small portion of the goods of any kind are used for legitimate purposes. The men hawk and peddle their clothing at prices ranging from \$2 to \$5 per suit, and the presumption is founded on a good basis that the majority of the goods issued find their way into the hands of white purchasers.

So long as these people are unprovided with fixed habitations their improvidence will continue, and so long as they continue to roam it is worse than waste to supply them with good clothing and other materials to be sold at one-fourth the original cost to the first buyer. In my judgment it would be better and more fully answer the purpose to furnish each woman with a ready-made, highly-colored cheap skirt, and a tunic made of six yards of calico; children's tunic blouses made up, and proper leggins and cloths ready manufactured for the men. The action might be considered arbitrary, but it is necessary at times. Those things, with blankets, hats, camp equipage, and brown muslin, should be the sum total of issues to the Bannacks until they become permanent residents of the reserve, and as that residence creates wants, supply them. Much money may be saved by this means and the Indians be as well satisfied as at present.

#### AGENCY BUILDINGS.

Estimates for school and other agency buildings were submitted by my predecessor some months since in compliance with instructions from

the honorable Commissioner of Indian Affairs, but, owing to the insufficiency of appropriation made by the Forty-first Congress, the work of carrying out article 3 of the treaty of July 3, 1868, was stopped. The saw and grist mill, physician's residence, and house for accommodation of employés have been erected and partially finished. The machinery for the grist-mill is on the ground and should be set up and put in running order. The denomination to whom this reservation has been assigned is prepared to furnish any amount of teachers that may be demanded whenever school accommodations are furnished.

The Indians evince a willingness to comply with article 7 of the treaty, so far as their children are concerned, reserving to themselves the privilege of roaming to some extent, which necessitates the establishing of a boarding-school, and to which I beg leave to call your particular attention.

#### SUBSISTENCE FOR INDIANS.

Owing to the destruction by grasshoppers of almost the entire crops planted on this reserve during the past season, it will be necessary for the Government to furnish subsistence for all the Indians, the Bannacks excepted, that live upon this reservation, for the next year.

It is to be regretted that such is the case, but the loss of the crops is one of those accidents that cannot be guarded against by any foresight. Since receiving from the Department of Indian Affairs such information as enabled me to predicate the actual status of the finances of this reservation, I am not at all astonished at the action of my predecessors in giving to the Indians long permits of absence from the reservation, having been obliged to do precisely as they did, viz, push the Indians out on fishing and hunting excursions for purposes of economy. The whole number of able-bodied Shoshones, under the leadership of their chief, were induced to go east, toward the Tetons, on such expedition; and while the rushing off of the Indians from the reserve is to be deprecated, the agent, besides being liable to censure, is forced to do so, else subsistence for the winter, when most needed, will be jeopardized.

It is not my province to inquire further, but to lay the simple truth before you for further action; and having done so, I am, very respectfully, your obedient servant,

M. P. BERRY,

*United States Special Indian Agent.*

HONORABLE COMMISSIONER OF INDIAN AFFAIRS,  
*Washington City, D. C.*

---

No. 100.

UINTAH VALLEY AGENCY,  
*Utah Territory, September 22, 1871.*

SIR: In pursuance of instructions from the Department, dated June 18, I have the honor to submit this my first annual report of the affairs pertaining to this agency.

It will hardly, I presume, be expected that I should make an accurate and detailed report of matters before my arrival, inasmuch as I have no data in this office or within my reach upon which to found one.

I arrived in Salt Lake City on the 3d day of December last, just after

Brevet Colonel J. E. Tourtellott, late superintendent of Indian affairs in this Territory, left. This I regarded as a misfortune, inasmuch as I expected to get much valuable information from him in regard to Indian affairs in the Territory, and particularly in regard to this agency, and also to receive some books and papers, from which I might post myself relative to my position and duties. I immediately set about trying to find out the locality of the agency, the best mode and route by which to reach it, and also the whereabouts of the agent, Lieutenant George W. Graffam. After much conflicting information on all the points on which I desired it, I learned that the late agent resided at Fort Bridger, Wyoming Territory. I telegraphed him, and learned that he had gone to the agency preparatory to turning it over to me. Learning that the road to the agency from Salt Lake City was impracticable at that season of the year, on account of snow on the mountains, I went to Fort Bridger, and finding that Lieutenant Graffen expected to return soon, and fearing I should miss him on the road, I determined to await his return, which occurred about a week after my arrival. He was, however, unprepared to turn over his books and papers, and I was compelled to wait several weeks upon him, and, in the mean time, reported to the Department. After hearing from it, I visited Salt Lake City, to make some necessary arrangements and procure needed supplies, preparatory to visiting the agency. After returning to Fort Bridger, I left, on the 28th of January, for the agency, variously estimated to be from one hundred to one hundred and fifty miles distant. After a severe and tedious journey of nearly six days, I arrived here on the morning of February 3.

My first impressions of the agency were anything but favorable, and I am free to state that, had I had an adequate conception of its position and condition, I should not have accepted it; but, having accepted and being here, I immediately commenced a survey, in order to ascertain, if possible, what was best to be done. I found the employés—some of them utterly depraved and worthless—and Indians completely discouraged, having almost come to the conclusion that the agency was about to be abandoned, the latter roaming about discontented and hungry, having access to every place except the commissary, in which there was little, except flour, worth keeping from them. All were on short rations of everything except flour and potatoes, and with a very remote prospect of a new supply. I found comparatively few Indians here, most of them being out on hunting expeditions, to procure something on which to subsist. The chief, Tabby-To-kwana, and several influential Indians, were present, with whom I held a council, at which I laid before them, using one of the Indians and an employé as interpreters, the benevolent plans and purposes of the Government relative to their care and support, telling them that "Washington" designed to treat them kindly and liberally, but that he could not always get good men to carry out his plans; that I desired to do as the Great Father told me; that I did not want to promise them much, as they knew promises were not always kept; that they must wait and see whether I was a good "monch" or not. They seemed to be well pleased and disposed to give me a fair trial.

#### CONDITION OF THE AGENCY.

This agency seems to have been retrograding for the last year or two, but never in as favorable a condition as one would be led to believe from the reports, and especially that of 1869. From that report it appears that there were 110 acres under cultivation, producing 1,750 bush-

els of wheat, 1,200 bushels of corn, 1,500 bushels of potatoes, 3,000 bushels of turnips, and 240 bushels of oats, and vegetables worth \$1,000, the value of all these vast products estimated at the snug sum of \$23,980. Now any one at all familiar with the former and present condition of this agency will be utterly at a loss to account for its present retrograded condition. The fact is that this amount of tillable land and its vast products never existed on this agency, except on paper and in the fertile imagination of those who penned those reports. I feel compelled, in justice to myself and the men under my charge, to make this statement, inasmuch as my own report will, in comparison with these romances, appear at a great disadvantage—perfectly insipid. About 15 acres of new land have been brought under cultivation this year, and the whole amount cultivated by Indians and employés is estimated at 85 acres, a few acres of the old land being left out. I say estimated, for we have no means of accurately ascertaining the precise number of acres. This agency being so broken by streams and patches of rocky land unfit for cultivation, it would be almost impossible, even with chain and compass, to ascertain the precise amount, and for these reasons a vast amount of fencing has to be done to secure a small amount of tillable land. My attention was first directed, after putting up one new log-house for use of employés, to a preparation for putting in a crop. There being not over 20 acres fenced, and that only partially, we immediately commenced cutting, hauling, and laying up poles, repairing old and making new fences, having to haul the material from two to three miles. We have built over three miles of fence and used altogether over 10,000 poles in its construction, requiring a vast amount of labor and time. Being short of provisions and seeds to plant, I determined if possible to procure them from Salt Lake City. With this view I started my ox-team for the city on the 20th of March; some saying I could, while others said I could not, get through the mountains. After over three weeks of laborious and severe efforts, being compelled to leave my team in the mountains, I made my way to Salt Lake City, by way of Heber City and Provo, directing my teamster to follow as soon as possible. After several weeks more, my driver having to return to the agency for provisions, my team got to the city, and, procuring some supplies, I returned to the agency, arriving here about the 27th of May. Though expensive both in valuable time and in money, I gained much information and experience which I hope to make available in the future. I directed Mr. P. Dodds, whom I left in charge, to plant all the seeds on hand, and plant for and aid the Indians in their crops, several of them having some seed of their own. The result is that several of them have raised considerable produce, but their crops have suffered much from the want of fencing, their farming land being so scattered we were unable to fence it all. We sowed some oats, barley, buckwheat and turnips, and planted some other vegetables, after my arrival from Salt Lake City, so as to test the soil and climate for the various productions; and from present appearances of the various crops I am very much encouraged and believe, though at first I was in doubt, that the capabilities of this valley for agricultural purposes are equal to any in the Territory. Its chief excellence, however, is in its nutritious grasses and adaptability to grazing, cattle keeping in fine condition during the winter upon the pasturage.

The first requisites for farming successfully on this agency are ditches and fences. All the lands cultivated are necessarily, from the situation of the agency, in detached patches, and the ditches temporary and insufficient, and though water is abundant and accessible, yet much labor and judgment

are necessary for the perfection of the former in order to the proper distribution of the latter. It must be apparent to any one that it is a source of annoyance and discouragement to the Indians and all others to attempt farming without fences, hence my efforts to partially remedy this the present year; but, owing to scarcity of suitable material and the necessity for economy in its use, this great want cannot be fully met till a saw-mill for the manufacture of lumber for fencing and other purposes is erected. Thoroughly impressed with this idea I sought, and, through the kindness of the Department was granted, authority and means to purchase a saw-mill, to which, through my intercession it added a grist-mill and shingle-machine. Owing to the scarcity of means I was compelled to do the freighting of this machinery (over 20 tons) with my employes over a way which it is a misnomer to call a road. This was more expensive and laborious than I had anticipated, and I fear I shall not be able to get it all freighted, with necessary supplies, before the so-called road is closed. I shall, however, have the saw-mill on hand, and hope, if the proper facilities are afforded me, to have it in operation this winter, and be prepared to utilize its products on the agency in the spring.

#### THE INDIANS' WEALTH, CONDITION, ETC.

As I have already intimated, the Indians seem to be well disposed; some charges of stealing horses have, it is true, been made against them; thus far, however, no satisfactory evidence has been produced implicating our Indians in the matter. The principal chief, Tabby-To-kwana (son of the late very influential and popular chief Lowi-Et) and several others have set a good example, both with regard to industry and general conduct. Unfortunately the nominal chief exercises very little control over the great body of the tribe, and there is a disposition to break up into small bands, several seeking to become leaders or sub-chiefs; thus the unity of the tribe is destroyed and the difficulty of its management enhanced. Having had no regular interpreter, and the Indians themselves being unable to count, I have been unable to ascertain with any degree of accuracy their number. From the most reliable data within my reach I estimate the number of Indians that make this agency their headquarters at 800; this estimate includes some of what are called Sheberets and other bands of Utes, in various ways connected with ours.

I have recently secured an interpreter and hope to be able, by his assistance, to have a complete enumeration of all the Indians that visit this agency. These Indians seem to have no settled or definite notion in regard to religion, though they have a general notion that there is a supreme being or Great Spirit, that made and superintends the government of the world—have, some of them, a general notion of a resurrection and a hereafter, while others ridicule the idea; they also believe in an evil spirit who, in some way, has influence and control over the actions of men, but their notions, as with all barbarous and savage nations and tribes, are exceedingly vague.

There seems never to have been anything more done for them than to keep them quiet and peaceable, by partially feeding and clothing them and amusing them with trinkets. No schools or missions have ever been attempted for their enlightenment, civilization, or Christianization. Many of them express a desire for schools, and I am confident that were their physical wants properly cared for, their physical necessities met, schools and missions might be introduced with the most beneficial results. Until this is done, however, I cannot recommend their introduction, as I am satisfied the expenditure of time and money in this direction would be without any adequate results.

I have in former communications to the Department given my views on this subject; they remain unchanged. I hope, however, before another year shall have passed, to be prepared to recommend plans for their more rapid enlightenment and civilization. Some progress has been made by these Indians, during the present year, in agricultural pursuits. I am thoroughly convinced, notwithstanding the former glowing reports, that these Indians have a better prospect for a crop this fall than they ever had on this reservation.

Their wealth consists principally in horses or ponies, cattle, and goats. For their number and estimated value, as well as amount and value of their crops, I refer you to my statistical report.

There has been considerable sickness and a few deaths. Most of the sickness is pulmonary, and that which results from exposure and want of proper shelter and clothing. Some venereal diseases exist among them also, especially among those who spend much of their time in the settlements.

They frequently apply for medicine; consequently I am compelled to keep a supply of simple remedies on hand. There should be a resident physician for the benefit of the Indians and employes, inasmuch as it is utterly impracticable to procure one in cases of emergency. I would therefore recommend an appropriation for this object.

Suffer me, in conclusion, to respectfully submit my views with regard to the future conduct of this agency, and the best mode, in my judgment, of carrying out the benevolent designs of the Government toward the Indians of this Territory. The location of this agency and its adaptation to farming and grazing purposes is, perhaps, as good as could be selected in this Territory; and the very first object of the Government, and to the accomplishment of which the agent should direct all his energies, is the putting of it into a self-supporting condition. In order to accomplish this, much time, labor, and means will be requisite. The policy of the Government in setting apart this reservation, away from the corrupting influence of unprincipled white men, and establishing an agency upon it for the exclusive benefit of all the Indians of the Territory, is, in my judgment, eminently wise and humane. But in order that this policy may produce the results designed, something more than the *mere existence* of this agency is necessary; it must have a vigorous life infused into it—bone, sinew and muscle—to enable it to resist storms and difficulties, and work out the end designed; a genial warmth and attractiveness that will draw the Indians to and retain them upon it; land must be cleared and fenced, permanent ditches constructed, suitable houses erected for all those who desire them and will consent to occupy them; orchards of fruit, adapted to the climate, must be planted, and every facility offered and inducement held out to them to engage in agricultural pursuits, and give up their idle and roving habits. In addition, as soon as deemed expedient, schools and missions should be established for their intellectual and moral training. It is frequently said, and not unfrequently by interested persons, that the Indians will never go to the reservation—they will not leave the graves of their ancestors. This will do in romances, but, in point of fact, it is not true; they have frequently been induced to give up all and remove to new homes. In my intercourse with Indians, I find they act from motive as others do; and whenever a stronger motive is presented, they act upon it.

Make this agency a home for the red men of this Territory, not those of romance; degraded, it is true, yet possessing, to a limited degree, some of the finer instincts and affections of our common nature; clothe it with all those attractions which make that spot and name so dear to

all our hearts, and, unless nature changes and motive ceases to operate, most if not all of the Indians in this Territory will be found, in a few years at most, on this reservation. There is room enough for all; and could the funds appropriated for this Territory be expended on this agency, requiring all the Indians to come here when prepared to receive them, the result, in my judgment, as well as that of others, would be much more satisfactory.

In a conversation with his honor Governor Woods, in Salt Lake City, he remarked that there should be a superintendent of Indian affairs in this Territory, and that he had so stated to the Government. I remarked that I had not thought upon the subject. But since that, I have given more attention to the subject and the results produced by former superintendencies, and, in my judgment, the results have not been sufficient to warrant its continuance or its readoption. As long as the Indians of the Territory can be furnished with goods at Salt Lake City and their various little settlements and villages, and visit at will the various towns and villages, they will become more debased and corrupted, and, if possible, still more enervated and disinclined to engage in agricultural pursuits. And, in my judgment, it is bad policy to scatter our means and forces. As in war, so here—unity of purpose and aim, concentration of small means and forces for the attainment of the end sought, will be found to produce the best results.

For the time being there should be some suitable person to look after them and relieve their immediate wants, and prepare their minds for a change as soon as the agency is in a condition to receive them. In view of the clearly indicated policy of the Government and the foregoing suggestions, I would respectfully submit the following estimate of funds necessary to carry on and develop this agency the ensuing year—twenty-five thousand dollars—as follows:

|                                                                                                               |               |
|---------------------------------------------------------------------------------------------------------------|---------------|
| Eleven employes, including engineer, carpenter, blacksmith, chief farmer, or foreman, and seven laborers..... | \$7,500       |
| Salary of agent and interpreter.....                                                                          | 2,000         |
| Supplies of all kinds, including farming implements, provisions, &c.....                                      | 3,000         |
| Two six-mule teams and outfit.....                                                                            | 2,500         |
| Cattle to stock farm and furnish beef for Indians and employes.....                                           | 5,000         |
| To survey and construct road from Bayou Green River City, or Salt Lake City.....                              | 5,000         |
| <b>Total.....</b>                                                                                             | <b>25,000</b> |

The above does not include Indian goods or presents, but with it I expect to construct, with the machinery already purchased, one of the most complete mill establishments belonging to the Department.

The following table exhibits the estimated area of land cultivated by the Indians, with the value of their crops; also their wealth in stock:

| Crops.                            | Acres. | Bushels. | Value.          | Stock.                              | Number. | Value per head. | Total.           |
|-----------------------------------|--------|----------|-----------------|-------------------------------------|---------|-----------------|------------------|
| Wheat .....                       | 22     | 330      | \$660 00        | Ponies .....                        | 450     | \$30 00         | \$13,500 00      |
| Corn .....                        | 10     | 200      | 200 00          | Cattle .....                        | 150     | 30 00           | 4,500 00         |
| Potatoes.....                     | 6      | 300      | 450 00          | Goats .....                         | 100     | 3 00            | 300 00           |
| Turnips.....                      | 5      | 100      | 500 00          |                                     |         |                 |                  |
| Vegetables .....                  | 5      | .....    | 500 00          |                                     |         |                 |                  |
| <b>Total value of crops.....</b>  |        |          | <b>2,310 00</b> | <b>Total value of stock.....</b>    |         |                 | <b>18,300 00</b> |
|                                   |        |          |                 | <b>Value of pelts and furs.....</b> |         |                 | <b>2,000 00</b>  |
|                                   |        |          |                 | <b>Total.....</b>                   |         |                 | <b>20,300 00</b> |
| <b>Total wealth.....</b>          |        |          |                 | <b>\$22,610 00</b>                  |         |                 |                  |
| <b>Wealth per individual.....</b> |        |          |                 | <b>28 28</b>                        |         |                 |                  |

On the 21st of July last I had the honor to address the Department relative to the proviso in the law making appropriations for the Indian Department for the year ending June 30, 1872, and the ruling of the honorable Secretary of the Interior thereon, setting forth the great inconvenience and embarrassment and the difficulty, if not impossibility, of carrying them out in connection with the law requiring accounts to be submitted quarterly. Owing to the distance and inaccessible position of this agency, I would most respectfully but earnestly urge the Department to such a modification of that law from Congress at its first sitting, as its effect, in my judgment, will be to drive all persons similarly situated with myself from the service.

I ought, perhaps, to apologize for the length of this report; my want of time for brevity is all I can offer.

I have the honor to be, very respectfully, your obedient servant,

J. J. CRITCHLOW,

*United States Indian Agent, Uintah Valley Agency, Utah.*

H. R. CLUM,

*Acting Commissioner of Indian Affairs, Washington, D. C.*

---

No. 101.

SHOSHONE AND BANNACK AGENCY, WYOMING TERRITORY,  
*September 1, 1871.*

SIR: Agreeably to instructions, I have the honor to submit the following annual report:

The stipulations of the treaty entered into with the Eastern Shoshone and Bannack Indians, at Fort Bridger, on the 3d day of July, 1868, were only in part carried out previous to the fall of 1870, it having been provided in the meanwhile that an office should be kept open and annuities distributed at Fort Bridger.

The Indian appropriation having removed all difficulty, the erection of agency buildings was commenced last fall. A dwelling-house for the agent and six for employes, a store-house, mission or school house, and buildings for grist and saw mills have been completed; also a small fort stockade and smith-shop, and twelve acres of ground plowed and fenced, upon which a fair crop has been raised the present year.

The reservation set apart for the Shoshones, and temporarily for the Bannocks, embraces the Wind River country, from its source to Owl Creek, a large tributary of said river. The point selected for the agency is situated on Little Wind River, a beautiful and highly productive valley, running nearly east and west, from one to three miles wide, and twenty-five to thirty miles long.

The climate in this valley is remarkably mild for the latitude, and in every respect the selection is a good one. I moved to the new agency in May last, and am making such improvements as are most necessary with a limited number of employes.

Agreeably to instructions, a farm for instructing Indians, consisting of 300 acres, has been located near the agency, and will be plowed and fenced this fall.

The migratory habits of these tribes may cause some delay in meeting the views of the Department, but it is believed a number will remain at the agency to farm next summer; and the growing scarcity of game will gradually compel even the reluctant to adopt an agricultural life.

The number of Indians properly belonging to these tribes has never been satisfactorily obtained, and it is very difficult to do so, as they are constantly shifting from one point to another, moving in different bands.

The Bannocks are scattered over several Territories, and the treaty with them is so indefinite they scarcely know to what reservation, if any, they belong. I have called attention to this subject, respectfully requesting the commissioners, at as early a date as possible, to arrive at a more definite understanding with them. They are too much under the influence of speculators, whose interests are not in common with the Government nor the welfare of the Indians. It also appears necessary for the peace and good of the service, that an agreement be made with the Indians to move the southern boundary of this reservation to a definite point north of the Sweetwater Mines, as it will be, and now is, impossible to observe the treaty in regard to white men encroaching upon the reservation.

These Indians are yet in their wild state, having learned from intercourse with the whites little more than their vices. Yet from their at present peaceful attitude, there seems to be no reason to doubt that, with good management, a work satisfactory to the Government and gratifying to the friends of humanity can be accomplished at this agency.

I am, very respectfully, your obedient servant,

JAMES IRWIN,  
*United States Indian Agent.*

Hon. H. R. CLUM,  
*Acting Indian Commissioner, Washington, D. C.*

---

No. 102.

WHITE RIVER AGENCY,  
*Colorado Territory, September 30, 1871.*

SIR: I have the honor to submit my report for the 3d quarter, 1871.

On July 22 I had transferred to me by the late acting agent, Mr. Charles Adams, all the property of this agency belonging to the United States, consisting of nine buildings, including a saw-mill. Of the buildings nearly all were in good condition, except the roofs, that were covered with cottonwood boards and a thickness of two inches of earth. The high winds of the winter and spring had blown most of it off, and the first heavy rain caused it to leak badly. We went to work and recovered them, so that they are tight for the present.

The mill accidentally caught fire on the evening of the 9th of August, and was entirely destroyed, with its machinery.

Before the fire was discovered, it had made such headway in the mass of debris that had been accumulating around it, that all efforts to save it were fruitless.

I would suggest that when it is rebuilt a shingle-mill be attached to it, for all these roofs need to be covered with good spruce or fir shingles, as that timber sufficient for shingles can be easily obtained. The glass, too, in the windows has been constantly falling out, for no putty has ever been used upon it, and the shutters are nearly half off, caused by warping, they being constructed entirely of cottonwood.

Anticipating that the mill machinery cannot arrive in time to be of use before winter sets in, I have caused to be cut and hauled logs suffi-

cient to construct a stable 58 feet long by 16 wide, and 10 feet high, which is already erected, covered with poles and long coarse hay, so that we have ample room for all the work-cattle and mules, but as sufficient boards are not to be found to construct a table, I would urge the necessity of the mill for doors and windows.

We need lumber very much for fencing-material, as one small spot of  $1\frac{1}{2}$  acres is all the fenced land at this agency, and we would not think of planting or sowing on a farm where 1,600 horses, 150 goats, and 440 head of cattle roamed at will. Had the ground sowed to wheat and oats by Mr. Adams been fenced, sufficient grain would have been saved for seed the coming year. As it was, one could hardly find the spot that had had a crop, so thoroughly was it eaten up by the horses, goats, and cattle.

With regard to the agricultural prospects for the coming year, Mr. Adams informed me that it was only an experiment which he had tried for the first time, it having been thought impossible to raise crops, on account of the alkali in the soil and the coldness and high altitude of the agency. We are of the opinion, though, that the experiment has proved that wheat, oats, potatoes, and some other garden vegetables of the hardy kind can be raised. The corn in the garden did not mature, owing in part to the want of irrigation, but the potatoes and some other vegetables did mature, and were excellent. I should not attempt to sow or plant without irrigation, and, as some spots can be selected easy to irrigate, I shall select those for farming purposes. I have purchased four mules, and these, with the oxen, are ample for our work.

I found no plows, except broken ones, at the agency, and have purchased one, and shall break up six or eight acres this fall. The manure and offal that accumulated last winter was burnt up, but, being of the opinion that even on the best land good stock-manure is a great fertilizer, I shall take care to use it to enrich the land. We have cured and put in covered stacks 50 tons of excellent hay. Last year but a small quantity was secured. The severe storms and deep snows rendered it necessary to keep the work-stock upon hay during three months of the year, and Mr. Adams assured me that it was absolutely necessary to keep the work-cattle during the inclement season on hay, and have them well protected from the inclemency of the weather.

The herd of cattle that was driven here by Mr. U. M. Curtis from "San Louis Plains," numbered 290 cows, 4 Durham bulls, 90 young steers, and 56 heifer calves and yearlings. One of the large Durham bulls they were obliged to shoot; the other was left on Bear River, being too foot-sore to be driven, but may be brought in. Of the 290 cows, a large portion are Texas cattle, but the heifers and young steers are one-half American, and fine stock. They were in good condition, when we consider they were driven four hundred and fifty miles, at a season of the year when grass was scarce, and through sixty miles of the heart of the Rocky Mountains. I take pleasure in remarking that Mr. Curtis fulfilled his contract acceptably, and that those cattle could not have been driven the long distance and looked better by any other man.

A letter of Mr. Sheath, asking for compensation for herding the cattle from February, I send to you, not having any means of knowing whether the claim is just; also a demand for tolls, that Mr. Curtis signed, that I do not feel warranted to pay without instructions from the Department. The cattle are branded with every variety of brand, over thirty in number. We propose to build a corral and have them all branded with the letters I. D., "Indian Department." At a council of the chiefs and head-men of

this agency, held August 10, 1871, among the matters brought up for consideration was a desire that this agency be removed to Bear River, sixty-five miles north, and the reasons urged were the excessive cold of the winter, and the scarcity of game in this vicinity. The chiefs were unanimous in requesting me to insist on its removal. Douglas, their head chief, said Governor McCook promised its removal after one year's experiment here. By consulting Thayer's map of Colorado for 1871, I find that the Indian reservation does reach the Bear River within ten miles, and that at Williams Fork. With the experiment this year in raising crops, I am fully convinced that the change is not expedient, but, viewed from a pecuniary point, doubtless it would cost the Government far less for the transportation of freight; a saving of two or three per cent. could be made, but the buildings are all here, and I do not think with regard to game the Indians would experience any advantage; the country between the Bear River and Rawlins will soon be settled up, and the game, of course, will disappear. I would like the Department to consider the matter, and report to me at its earliest convenience. Doubtless the Indians would not have thought of making the change, had it not been suggested by the governor and talked of by white people.

Upon the subject of education I would report that, while the chiefs do not feel much interest in the matter, from the simple reason that they do not understand what it means, yet they do not oppose it; and as soon as a school-house can be erected, it will be used, numbers of them having expressed a desire to learn. One of them, (by the name of Joe,) who speaks English fluently, has said to me that he was anxious to go to school; and with his knowledge of the English language could be easily taught so as to fit himself for an interpreter—a man very much needed at this agency. The teacher has been unremitting in his efforts to acquire a knowledge of the Ute language, so as to be able to teach them. Our books, blackboards, slates, &c., have not been received; but we expect them next week, and shall fit up a room, and have no doubt but that a good school can be carried on. We have reported forty scholars, yet, doubtless, in a short time more will be added. I have confidence that if the right means are employed the Indian youths can be educated—perhaps not quite so easily as the freed children of the South.

I take pleasure in reporting that no complaints have come to me from Indians, or from whites, of disturbance or difficulty of any kind. The Indians are highly gratified with the herd of cattle that the Government has given them. No intoxicating liquors of any kind are to be obtained within a hundred miles; hence the Indian camp has been quiet and peaceful, and the Indians themselves, in their manners and deportment, have been very quiet and peaceful. With the exception of the talked-of removal of the agency, they seem to be satisfied with what the Government does for them, and are anxious that other men now off the reservation shall come in and live with them.

The general health is good, although, from time to time, we have applications for medicines, which we give according to our best judgment. I regret very much to prescribe in cases I do not understand, and wish that the Department would furnish a physician. We are so far remote from white settlements, that if accidents occur among the Indians or employes, life often has to be sacrificed for want of medical and surgical aid. The physician at Fort Steele, (Wyoming Territory,) said to me of the late Otto Von Hagen, who died in the hospital last July, that

if he could have had prompt surgical aid, his valuable life could have been saved.

I have the honor to be, very respectfully, your obedient servant,  
J. S. LITTLEFIELD,  
*U. S. Indian Agent.*

Hon. H. R. CLUM,  
*Acting Indian Commissioner, Washington, D. C.*

---

No. 103.

LOS PINOS AGENCY,  
*Colorado Territory, September 11, 1871.*

SIR: Two fevers and a rough jaunt of sixty miles into the mountains have pushed off this report till the last mail by which it can reach you this month. I must be brief.

I received my commission at Saint Joseph, Missouri, April 5, 1871, and reached this agency May 3, relieving Lieutenant C. T. Speer May 10, who left May 11. The property of the agency was not in the condition I should have desired. The cows and young stock were in good plight, but too much scattered to be correctly counted; the working oxen were in fair condition, but two were very old; the three mules were thin, one of them lame in the right shoulder, "sweenied," and has not fully recovered yet. Of the 81 beeves represented by the inventory, more than 50 were roaming unherded among the hills and gorges, wild and lean, miserable beef; the sheep were also lean, nearly all wethers; of the small property many things, as one wagon, one sled, most of the spades, were demolished or worthless. The mill was said by my predecessor to be in prime order, but the workmen regarded it as almost unserviceable, and an attempt by my present carpenter to saw a few sticks of timber proved a failure, though he seemed acquainted with the machinery. The buildings are generally poor, especially those put up under contract. The mill, not made with mortise and tenon, had to be braced outside to prevent the winds blowing it down; the store, under the weight of a little more dirt to prevent leaks, slipped its corners and let half the roof in upon what goods remained, last Thursday; the timbers were not fastened at the corners by dovetails nor pins! The rest of the buildings are showing signs of decrepitude, though scarcely two years old, the house of the agent not excepted.

I regard the keeping of stock here in large herds, unsheltered and unfed, as a cruelty and a hazard, however popular the business may be from its profits in favorable situations. Several winters may pass without one of the animals dying of cold or starvation, though the young must suffer every winter; then one tremendous snow-fall, like that in which Frémont's animals and men perished, may sweep the reservation of neat stock. I have seen no occasion for changing my opinion of the nature of the stock now on hand here, nor of what ought to be done with it. I simply obey instructions. Many of the sheep will soon be worthless from age, and a severe winter will decimate them; coyotes and gray wolves, too, will take some from the best of herders. So much mutton lost, no increase to cover the loss; very few ewes. Permission to kill them two months ago would have enabled me to furnish the Indians with abundance of fat mutton; now they can stay only about a month longer, and I must buy beef to save a profitless flock of wethers.

Agriculture here cannot be at all depended upon for subsistence. I think the agency 8,000 feet above sea; and, between grasshoppers in May and June, and frost in August, I have only succeeded in raising potatoes, of which a common spoon will hold six at a time—green peas potatoes. Even these had to be nursed by irrigation. Grasshoppers have been very numerous here during the three seasons thus far known to Americans. Grass for hay is a complete failure in this valley, where in the two preceding summers plenty grew.

My relations with the Indians have been peculiar. I do not possess the civilizing accomplishment of drinking whisky, nor of smoking, nor chewing tobacco, though I have always here given up half my house to the Indians for a smoking and sleeping room, forbidding their smoking only in my office. I have designedly made no special presents to the Indians for the purchase of good will, hoping that in due time they would see my good will and give theirs in return. Free from bad advisors, I believe they would readily have done so. They ceased to ask for presents long ago. I hoped on this plan, partly at least, to wean them from the disposition to beg and be hangers-on, so common among Indians. Another agentman's course on the same point would be very easy. I think I have largely succeeded in gaining confidence and respect, and abundance of supplies will bring their good will. I have gained something in their good order on ration days, and in their yielding to my apportionment of supplies. I easily gained their respect for our Sunday as a day of needed rest. They seldom bring work for the shop or come for supplies on Sundays now.

I have seen no good opportunity for direct missionary work, yet indirectly I have done something toward civilization and education with them. They are still very averse to schools, to work, and to further advance even of agency men into the reservation. Captain Jocknick can tell you how the chiefs talked with us together. His visit, welcome and helpful, was too short and a month too late. Winter is almost upon us; snow on the mountain northwest of agency to-day. Annuities and flour not here yet; roads becoming wet and muddy; too late to do much haying or milling. Lumber costs about all it brings at best, though a real convenience. The reports of disaffection and trouble which have reached you I believe spring rather from the malice and selfishness of white men than from real dissatisfaction among the Utahs.

See in separate paper my report about miners.

I believe the number of these Indians has been greatly overestimated. I have no exact figures.

Respectfully,

J. N. TRASK,  
*United States Indian Agent.*

H. R. CLUM,

No. 104.

SPECIAL UTE INDIAN AGENCY,  
*Denver, Colorado Territory, October 1, 1871.*

SIR: Acting under instructions contained in a circular from the Office of Indian Affairs, Washington, District of Columbia, dated June 10,

1871, I have the honor to submit the following report of the condition of Indians and Indian affairs at this agency.

The number of Ute Indians who habitually frequent Denver and vicinity, and who refuse to go on the reservation set aside for the Tabe-guache, Muache, Capote, Weminuche, Yampah, Grand River, and Uintah bands of Ute Indians by the treaty concluded March 2, 1868, is about 450. This does not include the followers of Kau-e-a-che and Sha-wa-no, both of which chiefs occasionally come to Denver with their bands, and rarely visit their agency, (the southern.) The Indians under my charge, and with whom I have mostly to deal, call themselves Ne-va-va Utes, and are led by Washington, Colorado, Ti-ah, John, Jack, Wau-zits, and Un-ga-pi-as, all of whom wear the badges of aboriginal royalty in the shape of medals given them by officers of the Department, and to all of whom (except Colorado, whom I regard as a very shabby genteel specimen of a big chief, and who always comes alone, wrapping himself in the solitude of his own originality and in a very filthy blanket, when he desires to consult with me) I generally have the pleasure of addressing myself in council. I do not intend, in this report, to specify the almost innumerable occasions for meetings of this kind which have occurred during my brief administration, most of which have been for the purpose of establishing the right of property. In some of the cases Indians were the complainants, but in the majority of instances white men have been in search of redress for trespass and larceny committed by the Indians. In conducting investigations of such mooted questions I have not been able to avail myself of the assistance of the decorated gentlemen mentioned above, but have pursued the only course by which, in my judgment, my authority could be sustained and the abuse corrected, namely, to ignore all chiefs as parties responsible for the misdeeds of followers, and to make the offending individual Ute directly responsible for shortcomings, or the object of reward and commendation for exemplary conduct. (I am free to say that during my term of office, I have had but few occasions to express my approbation of the heroic or self-sacrificing deeds of any member of this off-shoot from the family of the great Ne-va-va.) I do not find among my Utes any instances worth recording of individual heroism or honesty, and I am forced to the conclusion (painful as it may be) that the Indian of the present day is not given to performances of which either of those attributes is a concomitant. On the contrary, I find among them much deceit; many incurable cases of kleptomania, and a total want of that gratitude which might be expected from the wards of a beneficent Government. If there is any reply to the efforts made to feed and clothe them, it invariably takes the shape of a murmur; and my red children cast out utterances that could only be prompted by an in-dwelling spirit such as is depicted as residing in the breast of Oliver Twist, when he dared to brave the wrath of Bumble, and ask for more. I have endeavored to make them believe that the amount allowed me for their subsistence is ample, (\$425 per month,) but without success. During the latter part of September, I had about thirty lodges here, and feeling my inability to care for them, I persuaded them to go to the buffalo range a month earlier than they had intended. If their hunt proves successful they will not probably need to be provided by the Government with anything except a little flour, sugar, coffee, and tobacco, a blanket apiece, and canvas for some twenty lodges, in order to keep them from suffering. I am informed by runners from their present camp that they are having indifferent success in hunting, and that they expect to return here about

the middle of November. I cannot see exactly how I am to dispose of them during the winter, as it will be impossible for them to go to the agency, even if they desired to do so. If the design of the Department is to starve this wandering band into a compliance with treaty stipulations, I think this would be a good time to make the trial; but I must say that I apprehend much difficulty before this plan succeeds. At the last council held here, an agent of the Interior Department was present, and to him these Utes emphatically declared that they would not make the agency their home. Their statement, which he can easily substantiate, was that if the Government did not see fit to provide for their wants, they would try to provide for themselves, which means nothing more nor less than this: that they will roam where they please, hunt where they happen to find game, beg in the towns, and steal from the ranchmen. My instructions inform me that I will be expected to keep the Department informed of the movements of this wandering band of Utes, and, in accordance with that order I have not only written you when I was cognizant of any change in the local habitation of my wards, but have also informed the commander of the nearest military post of such change, in order that the guardians of the frontier might not mistake the peaceful Utes for warlike Apaches or Piegans.

The fact that some of these Utes (among whom were Ti-ah and John) have ordered white men to leave the Middle Park country, has been made the subject of a special communication by me to the Department, dated September 6, 1871, and it is unnecessary for me to reiterate the occurrences and suggestions therein noted.

Much difficulty has been caused at this agency by Indians obtaining whisky; and until very lately it has been impossible for me to obtain any clew to the source from which this supply came. On September 27 I detected one George E. Ashbough in the act of conveying whisky to an Indian, and had him promptly arrested and examined before a United States commissioner for this Territory. The evidence was of such a nature that he was committed to jail, to await the action of the grand jury, which meets in January next. It is my intention to make an example of this miscreant, in the hope that his summary and severe punishment may deter others from transgressing the very wise law which forbids the bartering or giving spirituous liquors to Indians. I have had occasion to arrest and confine two of the aborigines during this summer, in consequence of disorderly conduct caused by the use of ardent spirits, but in each case I found it impossible to elicit any information that would tend to convict a white person. I therefore contented myself with confining the offending Utes in the city calaboose for twenty-four hours, and dismissing them with a reprimand, after exacting a promise to sin no more.

In concluding this brief chronicle of affairs, I desire to return my thanks to the officers of the Department at Washington for their courtesy and promptness in noticing my requests and aiding my efforts as agent, and although my position is not one of sufficient importance to attract the attention of the civilized world by the incidents or issues of its management, yet I have tried to feel as though I were the director of momentous influences, and with the maxim in view that "whatsoever is worth doing at all, should be done well," I have used all my energies to dispense justice and to maintain peace between the white and red men in my district.

Respectfully calling your attention to the accompanying statement of Dr. W. H. Williams, regarding the sanitary condition of the Ute Indians

at this agency, I have the honor to be, very respectfully, your obedient servant,

JAMES B. THOMPSON,  
*United States Special Indian Agent.*

Hon. H. R. CLUM,  
*Acting Commissioner of Indian Affairs, Washington, D. C.*

No. 105.

OFFICE UNITED STATES INDIAN AGENT,  
*Nevada, September 30, 1871.*

SIR: In accordance with the regulations of the Indian Bureau, I have the honor to respectfully submit my first annual report of the affairs of this agency for the year ending September 30, 1871.

On the 10th of April last, at Ionia, Michigan, I received commission and appointment from the President, confirmed by the Senate of the United States, to be agent for the Indians in the State of Nevada, (Walker River reservation.)

Without unnecessary delay I proceeded to Carson City, Nevada, where for some time I was delayed, waiting transportation to the reservation, seventy-five miles away, but on the 6th day of May I arrived upon the field, which, together with other matters connected with my first survey of the reservation, were reported in letter under date of May 8th.

I found the Pah Ute Indians occupying the reservation, and much of the country adjacent, as they are the most extensive tribe in Nevada in numbers, and superior in intelligence and culture.

At the time of my arrival there were unusual numbers present, waiting the time announced for the great fandango or dance which, I subsequently learned, was called to gratify the desires of some unknown prophet, who, in some way, had succeeded in advertising the farce that God was coming in the mountains beyond with a large supply for all their wants, of what Indians most desire, *game*, and withal transform the sterility of Nevada to the fertility and beauty of Eden. (All would admit a glorious transformation, but over which in prospect alone they would dance.)

Not less than one thousand have occupied their lodgings upon the reservation, or if absent at all, but little time during my sojourn among them, and yet I have not heard of the slightest difficulty among them that threatened to be of a serious nature. I found them at first what I have found them to be since—a very docile and friendly tribe. They are poor, and but little has ever been done to make them otherwise. Their chief subsistence consists of fish, game, grass-seeds, and pine-nuts, the latter growing upon the scraggy pines upon the neighboring mountains. The present year is lamentably unfavorable for their desires, as the unparalleled drought in this country has entirely cut off the supply of bunch-grass, and consequently no seed to be gathered; also the supply of pine-nuts has shared the same fate. Thus the Indians have had to depend almost wholly upon their fish and game, though the increased demand has greatly reduced the game, until that supply is now quite limited.

A small number have been rationed from Government supplies, while they have worked to clear off sage-brush and cultivate a portion of land, under the superintendence of the faithful farmer of the reservation,

Franklin Campbell, esq., and too much cannot be said to the credit of this gentleman for his long-continued efforts for this people.

The appropriation for Nevada has been too meager to accomplish what ought ere this to have been accomplished with so good a man at this post. Not a tithe of the demand; the great misfortune is the more apparent in the necessity of the multitude, who are deprived of the opportunity of entering upon the work, and thus becoming self-supporting.

From what has been done upon the Walker River reservation by the Pah-Ute Indians, under this judicious supervision, the past season, I am constrained to say that greater good would have resulted had the necessary supplies been furnished.

I have lamented my want of ability to provide what was required when I have seen eager, anxious ones around me desiring to make a farm of their own, and thereby procure a permanent livelihood.

Educational interests have had their place in my mind, but propriety and better judgment have always whispered bread first, then books; and yet their oft-expressed desire for schools, where their children might learn to read and write, demands a passing notice, and nothing, in my humble opinion, would bring an earlier and surer reward to the philanthropic than the establishment of labor boarding-schools upon this reservation.

I should be untrue to the impulses of my heart were I to pass unnoticed the virtue of this tribe. Their manifest regard for their females is remarkable, indeed, and quite in contrast to some Indian tribes who claim even more of civilization. I have been told repeatedly that, of the more than five thousand Pah-Ute Indians, there is not a mixed-blood among them, and I have seen nothing to contradict it. There may be cases of infamy and prostitution, but I believe they are the exception. They are as superstitiously benighted as the pagan of India so far as true religion is concerned, but are not blind to their sense of honor, and one has only to visit their lodges to witness their marked desire to be clad; and primitive inventions are considered far more preferable than nakedness—a virtue which I have of late sought to encourage by the purchase and issue of as large a supply of clothing as appropriations would justify.

Before I close my report for the Walker River reservation, I would most respectfully recommend that the honorable the Congress of the United States and the Department of the Interior would make such appropriations at an early day as is commensurate with the wants of this heretofore neglected people.

This reservation needs not only a large advance in supplies, but buildings and other improvements are greatly demanded, and the want of which only extends indefinitely the care of these wards, while, otherwise, they might be put upon a self-supporting basis at an early day. The share that they now receive from the appropriation of \$15,000 per year, with an addition of \$10,000 the coming year, would be none too much to meet the very pressing demands, and the want of enough to make permanent work is useless expenditure, only as it may be a benefit to the few that are favored.

#### WADSWORTH OFFICE AND PYRAMID LAKE RESERVATION.

On the 17th day of August Rev. George Balcom, special Indian agent for Pyramid Lake reservation, turned over to me, and received my receipt for the same, schedule of all personal property and effects belonging to the Indian service in connection with the Pyramid Lake

reservation, and having resigned, took his exit from the State of Nevada, to enjoy a better state of civilization and remunerative employment. Mr. Balcom had occupied rooms for office at Wadsworth, and turned over invoice of public property at these rooms to me also.

The 7th day of August last, while at the Walker River reservation, I was in receipt of letters from the honorable Commissioner of Indian Affairs, under date of July 24, instructing me to proceed without delay to inquire after and provide for the wants of the Indians on Pryamid Lake reservation, letters having been received at the Department reporting starvation and intense suffering among the Indians there. Upon receipt of this communication I proceeded at once to carry out said instructions, taking with me Mr. George Oneep, official interpreter for the Pah-Utes. On my arrival at Wadsworth I presented communications from the Department to Special Agent Balcom, who pronounced the reports a fabrication. However, taking him with us, we proceeded to visit the Pyramid Lake reservation. The full report of visit and doings were given in my letters to the Department under date of August 24, and I need not recapitulate, but only say that the returns for all the labor, talent and money expended there showed an almost abandoned reservation, without crops or intelligence, remunerating even in the most imperfect degree for the means expended. The few Indians that remained through the summer were so sickly as to require quite a large expenditure for physicians and medicines to do them justice; no cases of starvation, however, had occurred. From the time of the departure of late Special Agent Balcom I was virtually in charge of the Pryamid Lake as well as of the Walker River reservation, but on the 21st day of September instructions from the Department were received, under date of 12th instant, instructing me to assume full charge, with permission to establish office at Wadsworth, discontinuing the special agency entirely.

Much might be said about the Pyramid Lake reservation which the Department should know, but I can only hope in this annual report to touch points and leave them.

First. This reservation provides one of the finest fisheries in the country, and for months in the year a full support to all the Indians that choose to engage in fishing, there being a market so near that there is no difficulty in selling.

Second. There is a very fine range for stock, and quite a herd may be provided with feed the whole year, and nothing can be engaged in that produces a surer reward than stock.

Third. There is a good supply of timber, (cottonwood,) which is not only profitable to the supply of fuel for the Indians, but protection to herds.

Fourth. The discovery of a certain marble ledge by F. H. Cowler, esq., upon the reservation, may or may not be a source of revenue to the Indians. Time and money will develop; at present, as matters in connection were conducted and left by the late special agent, it proves quite a revenue of care to me.

My opinion regarding the agricultural interests of this reservation is that it will never avail anything of permanence unless at an expense unjustifiable. The land is very difficult to irrigate, lying high above low-water mark, full of sink-holes, and at a distance from the fall of water as to require a very long ditch to reach it. Again the dam that was constructed across the Truckee River, which runs through the reservation, to raise the water for irrigating purposes, is a source of more expenditure of money and labor than will ever return to the reservation, besides being a source of difficulty generally. It was built upon a sand

and gravel bed, with a broad sand-flat on one side and a sand-hill on the other, and no rise of water of any considerable amount but will break the construction or force a new channel at the side or end, and thus I am of the conviction that the hope of gaining much agriculture upon this reservation is exhausted, the results of the past season a criterion.

I therefore recommend that any surplus means that can be spared from the appropriation, over and above the actual need of providing for the sick and destitute, and such clothing as is needed for the Indians, be expended in stock and placed upon the reservation, either issued directly to the Indians or through some proper person, held in trust for increase for them. I am satisfied that pride would be taken as well as great interest by the Indians to increase their numbers, and thus provide against any future want. I am satisfied that if a special appropriation of \$5,000 were made for this specific object it would accomplish more than double the amount in the manner of the past.

The reservation is notoriously sickly for some months in the summer, and the time when farming is most needed the reservation is most abandoned, the Indians going to the mountains and returning in the fall for fishing.

The Pah-Utes are the same in spirit and action upon each reservation, and what has been written of the one applies as well to the other.

In conclusion, I would again advise relative to the necessity of increased appropriations. With the present prices of supplies, together with the rates of exchange, (as for everything we must pay in United States coin upon this coast,) the sum of \$15,000 for the State of Nevada is meager indeed to carry on the Indian service, and but little of permanent improvement can be expected to the masses of the Indians; but a just policy, including needful appropriations, will rapidly advance them toward self-supporting civilization.

I am, very respectfully, your obedient servant,

C. A. BATEMAN,

*United States Indian Agent, Nevada.*

Hon. H. R. CLUM,

*Acting Commissioner of Indian Affairs.*

---

No. 106.

SAINT GEORGE, UTAH TERRITORY,

*October 2, 1871.*

SIR: In obedience to instructions dated August 6, 1871, I proceeded to Pioche, Nevada, and entered upon the discharge of my duties as special agent for the Pi-Ute Indians of Southeastern Nevada and South-western Utah Territory.

The former agent, Captain Fenton, United States Army, left no books, papers, or record of any kind or description to guide or assist me in reference to the management of affairs at this agency. My former experience as Indian agent, in Idaho Territory, was of great benefit, and materially assisted me in the management of the Indians, who have been neglected at this agency, and most shamefully neglected by their former agent, who was profuse in promises, and whom they considered authorized to govern them, until they lost all confidence in the white man, having never received any clothing or subsistence, save in prom-

ises, always broken, which, so natural to the Indians when faith is broken, causes them to look with suspicion on all Government agents.

The Pi-Ute Indians are scattered over a large extent of country in Southeastern Nevada and Southwestern Utah, numbering some 4,000, scattered in small bands, and located according to the extent of land and water for farming.

I left Pioche, Nevada, September 10th, with a wagon-load of goods for the Indians and riding-animals, to visit the various bands, extending some two hundred miles southeast in Nevada and Southwestern Utah.

On the Meadow-valley Wash, and a small stream called the Muddy, they have some ten to fifteen small farms, and considering that they have no farming-implements, but in most cases plant with a simple stick, their ambition is most praiseworthy. They raise good corn, beans, melons, squashes, pumpkins, &c. These Indians are worthy of all praise, being good workers, and, with encouragement and the necessary farming-tools, would raise good crops.

I have supplied them with a small amount of spades, shovels, and hoes, purchased at Saint George. Their remoteness from any market of supplies makes it most embarrassing, as they can raise nothing without irrigation, and in many cases they are compelled to ditch for miles.

Some six years ago the valley of the Muddy was settled by the Mormons sent from Utah commercially to connect with the Colorado. They established here, and their product was abundant. Last spring, because this region was proven to be within the jurisdiction of Nevada, they broke up and left, only one family remaining out of about one hundred and twenty-five families. Some two or three families have since come in—Gentiles—to mature and utilize the crops left growing by the Mormons. The claims of these settlers were attached by the sheriff of Lincoln County, Nevada, for delinquent taxes, and bought in by the county.

This is a large and splendid valley, well watered by the Muddy, and I would most earnestly recommend the establishment of a reservation consistent with economy and good judgment.

The Mormons at this place had heretofore fed and taken care of the Indians. Their removal, and the necessary farming, has left the Indians in fact nothing to subsist upon, and, unless provided for, must either steal or starve.

The character of the Pi-Utes is not warlike; rather cowardly, but pilfering and treacherous.

The surrounding country being an unmitigated desert and yielding nothing, I therefore think this the proper place for a reservation, where the Indians from that country could be located.

The discovery of gold and silver mines in Arizona has caused considerable travel through the Indian country from Nevada and Utah, which fact makes it necessary to use every precaution to prevent trouble; the Indians claiming that the white man should pay them for grass and water, in traveling through their country, &c.; hence my endeavor for a good understanding between the Indians and whites, as the Pi-Ute nation extends to the Colorado on the south, and Beaver, in Utah, on the north.

I distributed a small supply of blankets, pants, shirts, needles, thread, wheat, flour, and bacon; also shovels, spades, and hoes, to the various bands, according to where said bands could be found, to such Indians most in want, a majority of them being destitute. Of horses they have scarcely any.

The Indians were much pleased, as heretofore they received nothing, nor any protection from any Government agent.

I cannot too earnestly recommend the establishment of a reservation for these Indians on the Muddy, at St. Thomas. It is most important and to the best interest of the Indian service, and an appropriation of \$65,000, to establish this reservation with mills, &c., I have no hesitation in saying would save the Government in future millions.

The great poverty of the Indians under my charge, and their want of goods and clothing, makes it necessary that their wants be immediately supplied to save them from perishing.

I therefore ask of the honorable Commissioner of Indian Affairs that there be placed to my credit, for the support of the Pi-Utes Indians, the utmost extent of the appropriations for Nevada and Utah Territory, which in Christian faith demands immediate response.

I am, sir, very respectfully, your obedient servant,

CHAS. F. POWELL,

*United States Special Agent, Pioche, Nevada.*

Hon. H. R. CLUM,

*Acting Commissioner of Indian Affairs, Washington City.*

---

No. 107.

UNITED STATES AGENCY FOR CHEROKEES,  
*Tahlequah, Cherokee Nation, September, 1871.*

SIR: In accordance with instructions from Hon. E. S. Parker, late Commissioner of Indian Affairs, dated January 11, 1871, I proceeded on the 25th of the same month to relieve Captain John N. Craig, late United States agent for Cherokees.

In entering upon my duties as agent, I was highly gratified with the complete record of the business of the agency kept by my predecessor. This, together with my familiarity with the affairs of the nation, afforded me the requisite knowledge for readily comprehending my official duties.

In making my report of the educational statistics, I am guided by information received from Mr. S. S. Stephens, superintendent of public schools. I am happy to state that the fifty-nine schools reported are in successful operation, and are proving the means of rapidly educating the Cherokee people. Almost every thickly populated locality has now a school. Still there are large numbers of children in the sparsely settled neighborhoods who do not enjoy such advantages for acquiring an education. Mr. S. S. Stephens, the energetic school superintendent, has had the most gratifying success in carrying on these schools with an efficiency never before attained, and in awakening an interest in education among the people. Three of these schools are devoted to educating the children of the freedmen; these are considered by council their proportion according to numbers.

A matter which demands the special consideration of the Indian Department is the lack of schools of a higher grade. The advancement already made by many of the youths of this nation absolutely requires such schools immediately, yet the school funds of the nation are very nearly absorbed in supporting the primary schools. These cannot be diminished in numbers, but should rather be increased; so that no means are available for the establishment of higher schools. The male and female seminary buildings are now in a good measure repaired, and these institutions would be put into immediate operation did the nation possess the funds necessary for so doing. I would therefore recommend

that the Government come to the aid of the Cherokees in their noble efforts to educate their children; that the United States grant to the Cherokees the means necessary to carry on two high schools, one for males the other for females.

Could the Government also aid the Cherokees in establishing an orphan asylum another great good would be secured. Such institution should be established as a manual-labor school. Farming, gardening, and the mechanic arts should be taught to the boys, and the girls should be taught in such occupations as are suitable for them. All this, of course, in addition to the branches usually taught at school. There are now 236 orphans provided for in private families by means of the orphan fund, but in many cases the provision thus made is very meager, and their opportunities for acquiring knowledge and skill outside of the school-house are very poor. A good orphan asylum, properly conducted, would be one of the greatest blessings which could be conferred on the unfortunate children of this nation.

In regard to the statistics of population I have been guided by the census returns taken last year, but have made some additions for accessions to the population since these returns were made.

The whole number of persons now in the nation legally entitled to Cherokee rights I estimate at 14,682. There are 1,500 or 1,600 Cherokees still in the State of North Carolina who should be provided with the means to come to this nation, so as to avail themselves of the privileges enjoyed by their brethren here. They should not be left where they now are, landless and destitute of the means of education, when they can have lands and schools free of charge. There are also about 300 Cherokees in various other States. When these are all gathered into the nation the population will be about 16,500. The country occupied by this people east of the ninety-sixth meridian of west longitude and south of the thirty-seventh parallel of north latitude is estimated to contain something less than 5,000,000 acres. Of this at least two-thirds are entirely unfit for cultivation. A large share of the tillable land is of an inferior quality. Most of the untillable land is entirely worthless, even for timber, as it consists of stony ridges and valleys covered with a scrubby growth, mostly a scrubby oak called black-jack. There are a few pine forests of very limited extent, also good timber of other kinds on the streams and in the south part of the nation. No country was ever less worthy of the high encomiums it has received than the eastern part of the Cherokee Nation.

You will notice in the statistical table that very nearly all the houses are put down as log-houses. It must not be supposed that all of these are mere cabins. More than a thousand of them are good, comfortable residences, built of hewn timbers, with stone or brick chimneys. They are equal to the best hewn log-houses in the Southwestern States. Many of them are weather-boarded, so as to present the appearance of frame-buildings. In giving the number 3,792 log-houses, I have only estimated one house to each family, where they were not known to be frame or brick. Many families have large double houses, a story and a half high, with hall between and all necessary out-buildings.

In most of the branches of agriculture the people are making very commendable progress. The estimates put down in the statistics tables are as near correct as I have been able to make them. The large stock-raisers who number their cattle by the thousand, after the *ante bellum* style, are again slowly coming into existence here. The facilities for keeping these large herds are now, however, greatly curtailed by the lands west of the ninety-sixth meridian being disposed of for the use of

other Indians. The raising of stock, on a more or less limited scale, and the raising of grain constitute the occupation of almost the entire population, and in these branches every year witnesses much improvement.

In fruit culture the Cherokees are, perhaps, more backward than in any other branch of agriculture. For some months past I have been calling their attention to this subject, and trying to awaken an interest therein and to stimulate them to action. Through my efforts, E. L. Jones and J. M. Smith have been induced to start a nursery near the center of the nation, which is now in successful operation. Mr. Smith has had much experience in this business in New York and Illinois.

By this effort I hope it will be rendered easy for every family in the nation to have an orchard and fruit garden, and it shall be my earnest endeavor to induce as many as possible to avail themselves of the facilities thus afforded.

The Cherokee country, while it is decidedly poor and rough, and vastly inferior to the great rich States of the West for the general purposes of agriculture, is well adapted to fruit-raising; the apple, especially, can be grown here to perfection. Some of the finest varieties on the continent have been originated in this immediate vicinity; for instance, the Shanum pippin and the Crawford pippin, which were originated on Crane Hill, Washington County, Arkansas. I therefore deem it a matter of special importance that this branch of industry be stimulated.

The Cherokees have an agricultural society, which held its first fair last year with very encouraging success and is now making arrangements for another. It is, however, with great difficulty that these fairs are kept up, owing to the fact that the masses of the people are very poor and the means necessary for preparing fair grounds and bestowing premiums are very small. Still, there is an evident increase in the interest taken by the people in these matters, and as their means and experience increase the importance of this society will grow. I regard it as a question of no ordinary importance, whether or not anything can be done by the Government to push forward the Cherokees toward that improvement in agriculture and mechanic arts which is so ardently to be desired.

To the Indians, in their incipient steps toward civilization, the Government issues provisions, clothing, seeds, agricultural implements, and furnishes blacksmiths, wheel-wrights, &c., all gratis, and offers other inducements to those Indians to live on their reservations and to adopt agricultural and mechanical pursuits. All this in the case of the Cherokees would be simply to encourage idleness and to discourage self-reliance. It would be rather a hinderance to thrift and progress than an aid.

On the other hand we see the great and rich States of the Union making the most rapid progress in all the branches of agriculture and the mechanic arts, supporting their agricultural colleges, and great experimental farms stocked with the best blooded domestic animals and furnished with the most improved implements and machinery, and with every variety of seeds, plants, trees, and shrubs. Such great and expensive operations would perhaps be as far in advance of the necessities of the Cherokees as the means used with the uncivilized tribes would fall behind.

But cannot some intermediate course be taken? Cannot an agricultural school be established of such a grade as shall be adapted to the condition of the people; and, connected with such school, can there not be an experimental farm and garden, stocked, furnished, and conducted in

such a way as may be required by the present progress of the people. For this purpose the funds of the Cherokees at present are inadequate. But if the Government shall obtain for them a fair price for their lands west of the ninety-sixth meridian, which it holds in trust, upon which to settle other Indians, then the Cherokee funds will be ample for all such purposes. In the mean time I recommend that the Government aid the Cherokees in establishing and operating such school, farm, and garden as above mentioned; that this aid be rendered by a direct contribution to its funds, to be expended under the direction of the agent or such person as the President may direct for the purpose indicated.

Since the last annual report from this agency the Missouri, Kansas and Texas Railroad has entered the Cherokee country near Chetopa on the north, and has crossed the nation at the narrowest place accessible, and entered the Creek country at a point about sixty-five miles south of its entrance into the Cherokee country. From this point the line of this road follows down and very near to the line separating the Cherokees and Creeks, until it crosses the Arkansas River. On this road cars are now running very nearly to the Arkansas. On the east the Atlantic and Pacific Railroad has entered the nation at the confluence of the Neosho and Spring Rivers, which form Grand River.

This road is now completed to its junction with the Missouri, Kansas and Texas Railroad, a distance of twenty-five miles, and the cars are now running to that point. By these two lines the Cherokees have now railroad communication with the States north and east. If they were equal to the people of the States in civilization and enterprise, and held their lands in severalty or wished to sell them, these railroads would certainly be a great blessing, enhancing as they would the value of these lands; but in their present state of advancement, and desirous as they are of maintaining their nationality and of holding their lands, the great majority of the people regard these roads as the introducers of calamities rather than of blessings.

The first effect of building these roads was to despoil the country along their respective lines of timber, which were already scarce. Although this has been done in accordance with law, still, as the timber is gone, it has had the effect to increase the dislike for these roads already entertained by the people.

As exaggerated reports of the excellence of the country go out, and the people of the States become more eager and clamorous for its possession, in consequence of these railroads passing through it, this feeling of displeasure is still more intensified in the minds of the masses of the Cherokee people. This state of things, together with the fact that at each session of Congress bills are introduced and pressed for the establishment of a territorial government over the Indians, and looking to the opening up of this country to the settlement by the whites, causes among the Cherokees a deep feeling of insecurity. They have so often been told by the newspapers and windy orators, both white and Indian, that the United States will take their country and open it for settlement, treaty or no treaty, whether they were willing or not, and that the railroads will hasten on this inevitable event, that these feelings of insecurity and dissatisfaction have become very general and intense. The Cherokees feel that they are a deeply-injured people, and that still more crushing injuries are about to be brought upon them by a power which they cannot resist. A feeling akin to that of despair is very generally prevalent among the common people, for they know that they (the common people) will be the victims in case these evil prognostications are realized.

If the Government would give them assurance that white settlers will not be permitted to force themselves into their country—that the treaty guarantees will be maintained—a vastly better feeling would prevail; a more cheerful effort would be made for improvement. The Cherokees would then hail the railroads as helps and blessings. Work on farm and in shop, in school and church would be more joyfully and therefore more efficiently performed.

By the fourth, fifth, sixth, and seventh articles of the Cherokee treaty of 1866 it is provided that various distinctions be made between the inhabitants of Canadian districts, &c., and the inhabitants of the other districts of the nation. This was done at the solicitation of the delegates representing that portion of the Cherokees who went with the seceding States in the war of the rebellion of 1861. These delegates urged that the loyal Cherokees, being much more numerous and in possession of the Cherokee government, would oppress the disloyal and render their lives and property insecure. They urged that the animosities engendered by the war were such as to require special guarantees for the safety of the minority, who had been disloyal.

Time has shown that these fears were groundless. The loyal and disloyal mingle together in peace and harmony throughout the entire nation. These distinctions are, therefore, useless. They are, moreover, liable to become annoying and vexatious in the administration of the laws. They mar the unity of the Cherokee Nation. I do, therefore, very respectfully recommend that the President, without delay, take the necessary steps to abrogate these distinctions, as provided in the seventh article of the treaty of 1866. I make this recommendation, as the unification of the Cherokee people is most earnestly to be desired.

The Cherokees feel that they have been wronged by the valuation of that portion of their land lately assigned to the Osages.

These lands were valued at 50 cents per acre, while the Osages received a much higher price for the lands which they sold in the same vicinity, and of no better quality. They feel that this wrong has been done them to secure an advantage, not to the United States, but to the Osages. They feel that as to worthiness of favor they will certainly compare favorably with the Osages, and if, in the eyes of the Government, they are not worthy of favors, that even-handed justice demands at least that no discriminations be made against them. In article 17 of said treaty it is provided that the Cherokees shall retain possession of, and jurisdiction over, all lands west of 96° until sold. Now, the lands assigned the Osages cut off from the Cherokee Nation proper all their other lands west of that meridian, thus rendering it impracticable for the Cherokees to exercise such jurisdiction. Therefore, to give satisfaction, and secure the ends of justice as to the valuation of these lands, and to adjust this difficulty as to jurisdiction, &c., I very respectfully recommend:

1st. That the whole of the Cherokee lands lying west of the ninety-sixth meridian of west longitude be valued by the President at rates which shall not average less than 50 cents per acre.

2d. That this appraisement be made forthwith.

3d. That the amount which shall be found due to the Cherokees for such lands be not paid immediately in cash, but that it be placed to the credit of the Cherokees in the shape of registered stocks of the United States, to draw interest at the rate of five per cent. per annum, such interest to be paid and used as provided in article 23, treaty of 1866. Then the Government could settle Indians on these lands at its own option as to time, price, &c. This would give the Cherokees ample

means for all their necessities, and then they would need no help for schools, seminaries, agricultural colleges, orphan asylums or anything else.

In regard to the Ocmulgee constitution I need make only one remark. If it should receive the sanction of the Government as it passed the council, or without any radical changes, I have no doubt it would be adopted by the Cherokees. They are, however, utterly opposed to any alterations that will weaken the treaty obligations of the United States. They cling to their treaties as the sheet-anchor of their rights and immunities.

The liquor traffic is still the greatest of all our curses, and no remedy is yet found. Desperate men bring it in and sell it, then intimidate all witnesses so that they do not appear against them for fear of their lives. Frequent arrests have been made by United States marshals, where the parties were undoubtedly guilty, but have escaped punishment by this process of intimidating witnesses.

Another great evil in this connection is that the United States marshals sometimes release men who introduce liquor, but are worth no property, and make them State's evidence against good men who have property and are guilty only of a technical violation of the law, and that in cases where no harm has been done. This course has been pursued because in the one case the deputy marshal, acting in his legitimate sphere, would get only his fees. In the other, acting in the double capacity of officer and informer, he gets in addition to his fees one-half the confiscated goods. There have been some most flagrant wrongs perpetrated in this way.

There are a large number of freedmen here who are certainly objects of commiseration.

Their situation calls for help from some quarter. By the ninth article of the treaty of 1866 it was provided that the freedmen, freed by the Cherokees, who were in this nation at the date of said treaty, or who should return to the nation within six months from the ratification thereof, should have all the rights of Cherokees. Many of these had been dragged South by their masters, or had fled North to escape, and either did not hear of the limitation, or were unable to reach the nation within the time; yet many such came in subsequently and have opened farms and built houses, supposing they were on the same footing as the other freedmen about them. Now the supreme court of this nation decides that they have no rights here, and of course they must be driven out, leaving their native land, houses, farms, friends, and kindred—leaving the labor of years, and having blasted their fondly cherished hopes. I respectfully recommend that some steps be speedily taken to ameliorate the condition of these unfortunate freedmen.

I have frequently received information of intruders settling on Cherokee lands south of the thirty-seventh parallel. On investigation I find this information confirmed. These intruders are quite defiant and cannot be removed without a military force.

The destruction of timber on the northern boundary still continues. All my efforts to prevent this have proved unavailing.

A matter which I have already brought to your attention is the importance of having all the boundary lines of the Cherokees located and marked. The eastern and northern lines will probably soon be run. This will help to settle several difficulties. It is a matter of great importance that the ninety-sixth meridian of west longitude also be immediately ascertained and marked. The Cherokees on this border are in great suspense as to whether they are on their own lands or on those assigned

to the Osages. I again urge my former recommendation that this line be immediately located and well marked.

It has been customary in years past, in this agency, and I believe it is the uniform practice now in all other Indian agencies, for the Government to provide a residence for the agent. But the building belonging to this agency, together with the fencing on the farm, were destroyed during the war of the rebellion, yet no other provision is made for the agent's residence.

I have already recommended that new agency buildings be erected; that the farm be refenced and put into cultivation; that it be carried on as an experimental farm, garden, and nursery; but have been informed that this or any part of it could not be done for the want of funds. I therefore now recommend that, for a residence for the agent, your Department make arrangements with the American Baptist Home Mission Society, (No. 239 Broadway, New York,) for renting their mission premises at Tahlequah. Their buildings and farm are in every way suitable for that purpose, and I beg leave, very respectfully to urge this recommendation.

I have the honor to be, very respectfully, your obedient servant,

JOHN B. JONES,

*United States Agent for Cherokees.*

HONORABLE COMMISSIONER OF INDIAN AFFAIRS.

---

No. 108.

UNITED STATES AGENCY FOR CHOCTAWS AND CHICKASAWS,  
*Boggy Depot, Cherokee Nation, August, 1871.*

SIR: The condition of the Choctaws and Chickasaws is in many respects very satisfactory. They have for many years enjoyed the ministrations and teachings of Christian missionaries, who began their labors among them before their removal to their present home, and came with them here; the civilizing and christianizing influences thus exerted are seen now in their development, while those who thus began the work "rest from their labors." Under the efforts and influence of these missionaries, many of the children and youth of thirty years ago were aroused to efforts to obtain an education, the results of which we now see. The leading men among these people now are those who were educated under the influence and direction of these humble laborers, some of whom lived to see much good from their work.

The institutions of learning thus begun were unfortunately brought to a close during the late rebellion, and the buildings, which were large and commodious, were occupied by armed men and left, at last, nearly destroyed and entirely unfitted for occupancy, while the nations were without means to repair and almost without heart to reopen them. But "time heals all things" and improvements have begun. For a further report of schools I would respectfully refer you to reports from the school superintendents of the Choctaws, marked A, and of the Chickasaws, marked B, which I inclose.

Missionary work is carried on by the Presbyterian and Methodist churches, and to some extent by the Baptists. The Presbyterian Society have recently suffered great loss by the death of two native preachers, and Reverend Mr. Colton has been called by his board to leave the work of preaching to superintend Spencer Academy. These missionaries are,

almost without an exception, capable and good men, I believe, so far as I am acquainted with them, and their influence among the people is for good. Many of the natives give good evidence of being sincere and faithful christians.

I believe many of these people are temperate from principle and a conviction of the wisdom of temperance. Yet great evil results from the illegal sale of whisky, more or less of which is introduced in one way and another into the country, in spite of constant watchfulness to prevent it. Whites on Red River, Texas, as stated in my letter to the Commissioner dated May 10, of the present year, are reported as selling whisky freely to Indians, in violation of law, and go unpunished. I have good reason to believe these reports, for most of the affrays and murders occurring in the country take place along that river.

There have been no hostile invasions of any part of this country by Indians on the western border, although twice this summer small parties of Arapahoes came into the Chickasaw country and levied contributions upon the people for subsistence while they hunted wild horses, but, upon it being represented to their agent how they were doing, assurances were given which will probably prevent any further difficulty of the kind.

The laws adopted by the legislative councils of these nations are, if properly enforced, very well calculated to secure quiet and good order, although there is need for some more effective arrangement for returning offenders, who may violate the laws in one nation and escape to the other, to the one whose laws are broken, although the law provides for their surrender, yet, practically, they go free to a great extent.

I had hoped to receive a report from the surveyors engaged in sectionizing the Chickasaw district, that I might embody its facts in this report, but it has not come to hand. Should I receive it in time I will forward it. (See letter marked C.)

The crop prospects of this country have been very good, but the long-continued dry weather is affecting the corn and sweet-potato crops very unfavorably, and they are the most important ones here, as the subsistence of the people depends largely upon them. I think, however, there will be sufficient grown for supplying the necessities of the people and those who travel through the country, this last being a large item. I have not been in the region where cotton is cultivated this summer, consequently cannot say as to its prospects. A good many cattle have been taken out of the country this summer, but not, I think, up to the natural increase.

Although this is a fine fruit country, but very little attention is paid to its cultivation, most of that raised being seedling and not brought to market with care, but, loaded loose in a wagon or brought in a sack thrown over a horse's back, gets to the consumer in anything but good order. There is scarcely any wheat raised here, and flour is brought in from Texas, Missouri, and Arkansas.

There is no one thing that has caused me more anxious thought in the affairs of my agency than a proper solution of the question, what is to be done with and for the freedmen? Under the third article of the treaty of 1866 their status appears to be the same as that of any other citizens of the United States, which would involve them in constant trouble, and prevent the possibility of their being anything but "hewers of wood and drawers of water" to others. While under the fourth article they seem to have a right in the soil, the same as the Indians of the country, and yet without being amenable to or under the protection of the laws governing the Indians, but in all cases of

offenses by or against them appeal must be made to the United States courts at Fort Smith, which involves so much time, travel, and expense, that many things are concealed which ought to be exposed. To allow them to remain in the country as they are seems an injustice to the owners of the soil, and they themselves have not the opportunity to educate themselves, as they are widely scattered and have no fund, public or private; again, they are generally averse to removal, and their labor is needed in the country, so that, look which way I will, I find myself in that condition men so often are found in, ready to find fault with what is, but unable to suggest something in its place. If it were thought best to carry out the provisions of the treaty for their removal I would suggest that the country known as the Seminole cession, belonging to the United States, would make a fine country for them, and with the interest on their trust fund, as it would become, if removed, theirs, they could have schools established, and would be likely to elevate themselves above their present position, which many among them see the importance of doing.

The many measures, territorial bills as they are called, which have been before Congress in reference to this country, cause a great deal of agitation and anxiety to the people of these nations. They fear lest the voice of those who would gain by seeing them dispossessed of their country may at last prevail over right and justice, which have thus far shielded them from wrong. But I have confidence in the ability of those who believe that right should prevail to maintain them in the rights so often guaranteed, so that their control of the country they own and occupy shall remain inviolate.

The statistical tables submitted herewith are but estimates from the best information obtainable.

From a letter received from Rev. Jesse H. Walker, presiding elder Methodist Church South, I learn that this church have within the boundaries of these nations: Appointments, 49; deacons and preachers, 23; members, 1,429; and have collected \$264 during the year ending October 1, 1870, and during their present conference year to August 1, \$158 36.

I have had promise of some report as to work of the Presbyterian Missionary Board, but it has not come to hand.

The proceedings of the Ocmulgee general council receives, I think, the approval generally of the Choctaws, but a prejudice has been created among the Chickasaws against it, on the assumed ground that, as the constitution does not provide for an equal representation of small nations with large in either house, the interests of the smaller nations will be imperilled. At a called session of the legislature, convened immediately after the adjournment of the general council, the question of adoption or rejection of the Ocmulgee constitution was submitted to the people, and rejected almost unanimously. The question of individualizing their lands is growing in favor with the Chickasaw people, many who have heretofore opposed it bitterly now being ready to admit that this affords them the best security against combinations that would deprive them of their homes. I hope to see this feeling increase until both Choctaws and Chickasaws will hold their lands as they now do their horses and their cattle, by individual right.

T. D. GRIFFITH,

*United States Indian Agent for  
Choctaws and Chickasaws.*

Hon. H. R. CLUM,

*Acting Commissioner of Indian Affairs,*

*Washington, D. C.*

## No. 109.

BUFFALO HEAD, CHOCTAW NATION,  
*August 19, A. D. 1871.*

SIR: I have the honor, in compliance with your request 10th instant, to submit my report of the schools in this nation under my charge.

Generally, during the past year, with few exceptions, our schools are progressing onward. The greatest obstruction we meet with in our school operation is owing to the majority of our children having no knowledge of the English language. But, through the exertions and untired energy of some of our teachers, who have taken a great interest in advancing their scholars, we have partially overcome that difficulty, yet much remains to be done to bring our school system to that standing that will bring honor on our people.

If we could only have a few years of rest from these surrounding land-hunters, and if they would not annoy us, and would let us alone! It is a great hinderance to the education and civilization of our people, for they are at all times uneasy about their situation. If we could only be let alone, so we could in quietness seek to have our children educated, so that they may not be crushed in the tide of immigration!

Our neighborhood schools this year are reduced in number, owing to the fact of our using part of the school-fund formerly used for that purpose, to establish two higher schools and one male academy, located in the lower part of the nation, called Arpuckserrulbe district, consisting of 60 boys, under the charge of the Presbyterian board. It has been in operation for a few months, and bids fair for the future.

The female seminary is located near Sculbyville, in this nation, consisting of 50 female scholars, under the charge of the Methodist board. It commenced in April, 1871. Its progress in the little time is very encouraging, and promises a great advancement in civilization.

There are thirty-four neighborhood schools, located in different parts of this nation. They are taught by white and native teachers. The number of scholars attending the schools is 850. There are some Sunday-schools carried on by the different denominations. So far our prospect for future advancement in civilization is very flattering. If we had plenty of school funds available, our people are very anxious to educate their children. We would establish more schools to educate every Indian child, to prepare them for the true and coming event. I do regret, when I look forward and see that we shall be compelled to call home our promising young men and young women whom we have sent to our Great Father, the President of the United States, and for whom former Presidents set apart a certain sum to educate their red children.

But, alas, his successor sits in his fine presidential chair, and sees our school-funds sold, so that we must meet the consequences—half educated. I ask for remedy, but in vain.

I have the honor to be, respectfully, your obedient servant,

FORBIS LEFLORE,

*Superintendent of Public Schools, Choctaw Nation.*

T. D. GRIFFITH,

*United States Indian Agent*

*for the Choctaws and Chickasaws.*

## No. 110.

OFFICE OF SCHOOL SUPERINTENDENT  
FOR THE CHICKASAW NATION, *August 17, 1871.*

SIR: In compliance with your request to send you the number of schools in the Chickasaw Nation, &c., I with pleasure submit the following:

There have been fourteen neighborhood schools in operation the last year just closed. Two hundred and ninety-seven males and one hundred and ninety-five females attended these schools. These schools were taught by six males and one female, whites, and six females and one male, natives. None of the schools were directly or strictly in charge of any religious denomination; yet religious services were held at most of the schools by the Methodist, Presbyterian, and Baptist denominations.

Hoping the above items may meet the requirements,  
I am, respectfully, your obedient servant,

C. D. JAMES,

*Superintendent of Schools for the Chickasaw Nation.*

Hon. T. D. GRIFFITH,

*United States Indian Agent, Boggy Depot, Choctaw Nation.*

## No. 111.

OFFICE OF CREEK AGENCY,  
*Creek Agency, Indian Territory, October 20, 1871.*

SIR: In presenting my first annual report on the condition, progress, and prospects of the Creek tribe of Indians, I would ask some indulgence, having entered upon the duties of agent in April last, an entire new field of labor with very limited facilities within the office for learning how to meet the responsibility—the new relations imposed. There had been no agent here for half a year, and my duties have been such, that I could not visit the different parts of the Creek country as might be desirable to enable me to speak from personal observation as fully as I might wish. This, and the failure to obtain educational reports, joined with personal illness, prevented the completion of my report previous to the 1st of October. Since that time the difficulties mentioned subsequently in this report will account for the further delay.

With reference to the political aspect of the tribe, I would repeat that, up to the 1st of September, there was an apparent tendency toward unity. The Sands faction was assuming more the form of a political party, and it was gratifying to know that, in the political canvass preceding the general election, there was more quietude than is often experienced in a political campaign among their more civilized neighbors.

It will, perhaps, throw some light upon the more recent aspect of affairs to refer to the former customs of this people. Under the old system of government, there were two divisions of the Creek people, known as the Lower and Upper Creeks. Each had a principal and second chief, and a speaker of the council. There were over forty towns in the whole; each town had its chiefs (civil and war chiefs) and its law-makers; this made their officers under that system numerous and their pay small. When they framed and adopted a constitution, that instrument greatly diminished the number of officials, and many of those who

had previously held office and did not receive appointments were dissatisfied. When Sands failed in 1867 to be elected as chief of the whole Creek people, under the constitution, he, too, became dissatisfied, and formed an organization under the old system; all those who were dissatisfied by loss of office, with their adherents, went over to the Sands faction, and as the constitutional government had not yet passed laws to punish sedition and treason, the executive thereof was powerless to prevent or break up this organization. Thus, this faction was composed both of those having northern and those having southern proclivities, and the question of loyalty or disloyalty was only a subterfuge of Sands to secure the freedmen upon his side. The real issue has all the time been on the one hand constitutional law and order, education, Christianity, and advancement in the arts and sciences, and, on the other, the restoration of the old laws, manners, and customs, drifting back toward the dark past. Thus, during the past four years, this disturbing element, like smoldering embers, has been waiting for another general election, that it might be fanned into a flame which should consume everything that opposed its progress. Knowing that this faction was strong and numerous against the present Creek government, standing aloof from its laws, and thus, at times, producing derangement and disorder in its machinery, some weeks previous to the election I wrote to its leaders, giving advice and directions, so that everything might pass off peacefully and in quietude. I therefore felt very little uneasiness until the reception of a letter from Sands, which was forwarded to the Department, under date of September 20. I then foresaw trouble, being almost sure that Sands and Cotchuchee were determined to make a desperate effort to seize the government and reinstate the old Creek laws.

This determination became more fully apparent when, three days previous to the meeting of the Creek council, parties which had been quietly gathering in their respective neighborhoods began to appear in arms around Ocmulkee. On Monday morning, October 2, the day before the council was to assemble, three hundred of the faction marched into Ocmulkee, drove out those who had charge of the council-house, took possession, announced Cotchuchee as principal chief, and proceeded with initiatory steps to organize their newly constituted government, keeping possession nearly the whole day. The chief Checote meanwhile had ordered the stores to be closed, and non-combatants, with the women and children, to leave the town. I had previously sent a message to him to use no armed force except as the very *last* resort. I left Creek agency on Monday morning, and, when eight or ten miles away, was met by special messengers from both sides with the assurance that my presence alone could prevent bloodshed. I arrived about 6 o'clock in the evening, and found both forces in camp, with men armed, horses saddled, and pickets set. There were about seven hundred for the defense of the government, and about three hundred in opposition. I drove into each camp, and found a wish for peace, but a determination to maintain, at all hazards, what each considered its rights. Pledges were taken from the leaders that neither party should fire the first hostile gun; and these pledges were faithfully kept. The stores were opened the next morning, and during the day the regular council of the nation met and organized, a quorum being present, without interruption. Six or eight from each party were gathered for a peace conference, which assembled each half day for several days, and, by working outside all the time the conference was not in session, I finally succeeded in laying the foundation, it is generally believed, of a lasting peace. By firm determination on my part to maintain the law, and, at the same

time, to secure peace, by reasoning to procure intelligent action, the leaders of the faction, who have been so troublesome for the last four years, have come to a written agreement that they will abide by the constitutional law of their nation, as recognized by the United States Government. The armed force on both sides has been disbanded, and business is moving on again quietly. The council has adjourned to meet again the middle of November, when the disaffected party are to send up their representatives to council, and all have agreed to be brothers and friends. I think the affair has been managed to the satisfaction of both parties, and trust that there will be hereafter more unanimity in feeling and action. It has been a difficult work of about two weeks' continuance, demanding coolness, managing power, and sometimes nerve. One of the most difficult parts was in counting the election returns. By a special act of council, granting discretionary power to the committee appointed to count the votes cast, a majority result was attained, and the leaders of the disturbing element, who had fancied that a majority held with them, were fully satisfied that justice was done, though Checote was declared to be elected as principal chief, and Micco-Hut-Kee as second chief, for the next four years. I trust that my action in this matter will advance the true interests of the Creeks, and meet the approbation of the Department.

A new cause of excitement, and, with many, of apprehension, has arisen from the construction of a railroad through the Creek country. The great number of white men necessarily introduced for the building of the road has agitated the nation throughout its whole extent. There is more cause of fear, however, from another class, who reason that because our Government has found occasion heretofore to annul treaties which have promised protection and inalienable possession to a perpetual home, they will, therefore, at a very early day throw open this beautiful county to the occupancy of those who can cultivate its soil more thoroughly. Many of this class are covetous, speculative, and unscrupulous, thinking that the Indian has few rights that a white man is bound to respect. They seem to think that the railroad monopolies will force Congress to yield to this outward pressure for possession of the Indian Territory, which is gathering strength from the north, east, south, and may soon surge in from the west. This cannot be, and I hope Congress will take such action as will give to this class the rebuke they so justly merit, and show them that our Government is just and will protect the Creeks in their rights.

The Creek people are steadily advancing and improving in farming and industry. One who has been familiar with their operations, says: "Upon their return to their country at the close of the war, they found it desolated, their horses, cattle, hogs, and all stock nearly gone, (the few left were wild;) their farms grown over with underbrush, their houses and fences destroyed or greatly decayed. They were destitute of means, and had to commence life anew. They went to work and rebuilt and repaired their houses; they again cleared and fenced their farms, and went to work in earnest to raise a subsistence, and with \$200,000 paid them per capita in 1867, their annuities, and the various amounts paid to the Creek orphans and the heirs of those that were orphans in 1832, and the income from the sale of the surplus products raised upon their farms, they have been enabled to procure a few horses, cattle, hogs, and other stock, and now there is scarcely a family but what has some stock around them, and will soon have a surplus to aid in supplying the demand which they always find near their own homes. They have been enlarging their fields from year to year, as their little increase

in wealth and worldly goods would allow, and now many of them have good farms and comfortable houses and cabins, orchards, gardens, (vegetable and flower,) and other improvements that follow civilization, education, and Christianity; and but for the agitation constantly kept up by land-grabbers and sharks generally, about taking away their country and opening it to settlement by the people of the United States, they would soon be a prosperous and happy people." They cultivate principally the lands in and along the valleys of their streams, reserving their uplands for grazing purposes. The freedmen have been equally industrious and as successful; many of them have good farms, well cultivated, and considerable cattle, and are rapidly accumulating property of all kinds. Though the country has suffered some from drought, the accompanying estimate of farming products will show a comfortable supply for home consumption of the usual products of the country.

The chiefs and leading men of the Alabama, Co-was-sar-tee, and Boluxshe towns of the Creek Nation have represented to me that they have relatives and friends now wandering from place to place in the State of Texas, near the Gulf, and between the Trinity and Brazos Rivers; that they were a part of the Creek Nation east of the Mississippi River, and left it between the years 1807 and 1812, moving west of the Mississippi, and settling between the Sabine and Naches Rivers, then a part of the republic of Mexico. In 1839 they were driven from their homes by the authorities of the republic of Texas, for no fault of theirs, some removing to the Creek Nation west of Arkansas, others to the Choctaw country, while about four or five hundred have been wandering from place to place, as stated above, stopping only so long at a place as the owners of the soil upon which they encamped permitted them. In this roaming condition they could not accumulate any property, it being all they could do, with industry and economy, to get a scanty subsistence. As it is the policy of the United States to concentrate the Indians in this Territory, and as those people desire to come among their own people, but in their present poor condition are unable to do so, they ask that the Government of the United States remove their brethren and friends to this country and subsist them until they can raise a crop the coming season. This I would respectfully recommend to the consideration of the Department. It is reported to me that there are also some indigent Creeks remaining in Alabama, who would like to be again incorporated with their tribe in its western home.

There is a general dissatisfaction among the loyal Creeks with reference to the amount paid them for lost property claims. Exposed and impoverished as they had been during the war, they had contented themselves somewhat with the thought that their property, at least, by former treaty, would be restored to them, since it was lost in defence of the Union. They were encouraged when told to make out their claims, but when those claims were diminished by the awarding commission to from one-third to one-fifth the original claim, and then, again, by the process of *pro rata* to so small a fractional part of the award, they looked upon the whole thing as a farce; and it is very difficult to convince them that the Government is not going to pay them, and that, too, at no distant day, the full amount of the award. Even a doubt expressed on this subject has a tendency to increase distrust in the good intentions of the Government. I would respectfully ask if justice does not demand that something more be done for the relief of these impoverished allies who suffered everything but death for the salvation of our country.

As agent for the Creek tribe, I would remonstrate against the abandonment of the military post at Fort Gibson. Although the late difficulties

here (for a time wearing a threatening aspect) have been settled without the intervention of United States troops, I was careful not to say that I had no troops nearer than Fort Leavenworth. While I am a strong advocate of moral suasion in the management of Indians, I am also well satisfied that it is much more effectual to have an available military force at command. It will, doubtless, sometimes be the only method of keeping in check the lawless desperadoes who can now have such easy access even into the very heart of the Indian country. I earnestly hope that at least a small detachment of well-disciplined soldiers—a part of them mounted men—be stationed at Fort Gibson, and would urge the necessity of both officers and men being such that they can from principle and with consistency enforce the intercourse law.

The Creeks are making very slow progress in the quality or convenience of their style of buildings. This has doubtless arisen partly from the poverty of the people and partly from the scarcity of mechanics and lumber. The difficulties are, however, fast growing less. There are six saw-mills in the nation, and four of them have arrangements for grinding corn connected with them; and there is one for grinding and bolting wheat, and an expressed determination by an enterprising freedman to have a flouring-mill before the harvest of 1872.

I herewith send the annual report of the superintendent of public instruction, and had hoped to send those of the respective superintendents of the mission-schools, but they are still delayed. There are about thirty neighborhood schools, which are in session usually ten months of the year. Though there are many things to retard their progress, they are slowly but steadily advancing the youth in intelligence and civilization.

It is sincerely hoped that the miserable hovels in which their schools are so often held will soon give place to neat school-houses, inviting teachers of a higher grade to fill the responsible places, who may accomplish much more rapidly the enlightenment of these so long neglected children of a greatly diminished race. Especially do we need as teachers here those who are patient, self-sacrificing, of pure moral tone, and capable of attracting the youth, as the home pressure toward school is often very slight. The Asbury manual-labor school at North Fork town, which was burned down nearly two years since, has been rebuilt, and is nearly ready for occupancy. The Tallahassee mission-school has been progressing during the past year. It is capable of accommodating forty of each sex, and always has more applicants than can be received. These schools will doubtless do much toward shaping the future history of the Creeks.

There has not been much change in the religious aspect of the nation during the year. There are Baptist, Methodist, and Presbyterian churches, under native pastors. It is to be hoped that the Christian organizations will send more men to supply the religious wants of these people, for outside of missionaries, with few exceptions, all their associations with whites are destitute of Christian instruction and example.

I much regret the revoking of the order to take the ninth census returns of the Creek tribe; I had hoped that the order would before this have been reissued, as there is so much need of such returns in this office.

I would close this report by respectfully urging the necessity of an appropriation for the purpose of building agency buildings for this agency, and would suggest the necessity of a model farm on the agency grounds as a means of advancing the agricultural interests of the tribe, by introducing improved implements and methods of culture, as well as

the choicest kinds of seeds and fruits. Without a chance for home surroundings, no man suitable for an Indian agent will long be willing to retain the position, and besides the safety of the office papers and property cannot otherwise be secured. The influence of the agent for good can be much enhanced by having about him a well-regulated household. Those of the tribe who visit the agency will then carry back with them germs of improvement which will be developed at their own hands.

Regretting my report has been so long delayed, I am, sir,

Very respectfully, your obedient servant,

F. S. LYON,

*United States Creek Agent.*

Hon. COMMISSIONER INDIAN AFFAIRS.

---

No. 112.

DEAR SIR: In accordance with your request, I submit to you the following report of the condition of the manual-labor school at Tallahassee, Creek Nation.

The school opened for the session of 1870-'71, on Friday, October 7, 1870, and closed Thursday, July 13, 1871. The number of scholars in attendance during the session was 80—40 boys and 40 girls, the fullest number allowed by law. The interest of the Creek people in the education of their children seems undiminished; and the children themselves manifest a readiness and aptitude in learning which is rarely, if ever, surpassed by white children. They are taught exclusively in English, and some of them advance in their studies at a rate which is truly astonishing, when we consider the difficulties with which they have to contend. The school is carried on on the "manual-labor" plan; the boys are taught to do the ordinary work of the farm, and the girls to sew and do general housework. There has been a good deal of religious interest manifested during the session, and quite a number of the scholars have become hopefully pious. There is great reason for encouragement to those who are engaged in the great work of educating and Christianizing the people. Several of those who were scholars last session are now teaching in the public schools of the nation, and giving general satisfaction.

The school building is still in a very dilapidated condition, although a new roof has been put on, and other repairs made during the past year. Several applications have been made to the Department, and to Congress directly, for an appropriation to repair the damage it sustained during the late rebellion at the hands of the United States forces, and an appropriation of \$1,000 was actually made by Congress for that purpose; but from some cause or other the money never came beyond the limits of the District of Columbia, and the damage is still unrepaired. I trust some one, in the interest of right and justice, to say nothing of education, will move in this matter during the coming session of Congress, and that an appropriation may be made which will, at length, be of some benefit to the institution.

Very respectfully,

LEONARD WORCESTER,

*Superintendent Tallahassee Manual-Labor School.*

Major F. S. LYON,

*United States Agent for the Creeks.*

No. 113.

OFFICE SUPERINTENDENT PUBLIC SCHOOLS,  
*Prairie Grove, Muskokee Nation, October 12, 1871.*

DEAR SIR: In compliance with instructions, I herewith submit this, my second annual report of the public schools in the Muskokee Nation.

In presenting this report of the educational interests in the Muskokee Nation, I will state that but little change has occurred since my first annual report.

I shall not be able to give you as full and complete a report as you desired, on account of not having received a full and concise statement of the condition of the schools from directors or trustees and teachers of the schools as was required.

At the general council of the Muskokee Nation of October 18, 1870, there was an additional number of schools allowed, making the whole number of schools 31. The council also made an appropriation of \$2,158 40, school funds, making the total amount of school funds, (except amount appropriated for the support of the two mission-schools,) \$13,158 40.

During the last session, which ended June 30, 1871, there were in operation 28 schools, with total number of children in attendance, 700, both male and female. The average daily attendance for each school was about twenty. Fourteen of the teachers were whites and thirteen native Muskokees, and one Cherokee Indian. Fourteen of the above teachers were males and fourteen females. On account of the difficulty of obtaining reliable persons for school teachers, some of the schools had to remain vacant until the present time. It is indeed hard to get good and reliable persons for teachers, on account of the salaries being so small. But that is all that can be allowed, which is only \$400 for ten months.

Notwithstanding these hinderances, we find ourselves in so much more prosperous and comfortable condition in way of educational interests than heretofore, that we are greatly encouraged in our work, especially as the people are beginning to appreciate more than ever before the privilege their children enjoy in these schools. If these people are only allowed to remain undisturbed on their beautiful and fertile land, there is no reason why any should not hope for and look forward to prosperity and usefulness in the future.

In my last year's report, I fully explained everything respecting the educational interests and the wants of the Muskokee or Creek people; so I trust the foregoing paragraphs will prove satisfactory.

Your letter, inclosing statistical blank returns of education and farming, &c., has been received, and, in reply, allow me respectfully to state that the time left between the receipt of returns and that at which you require them to reach your office, with the necessary information, is entirely too short to make anything like a correct return of the kind required. Knowing, as you do, the custom of the Creek people to live scattered through the country, and the great distance between the towns, besides the inability of the Indians themselves (many of them) to give correct information respecting the number of acres cultivated and the quantity of grain raised by them, the only way such reports or statements can be furnished is by visiting each family. This, as you must

be aware, would take three months or more to accomplish the task properly.

I am, sir, very respectfully, your obedient servant,

J. M. PERRYMAN,

*Superintendent Public Instruction, Creek Nation.*

Major F. S. LYON,

*United States Agent for Creeks, Creek Agency, Indian Territory.*

No. 114.

SEMINOLE AGENCY,

*We-wo-ka, Indian Territory, September 1, 1871.*

SIR: I have the honor to report that, on the 12th day of December, 1870, I took charge of this office as special agent to the Seminole Indians, relieving Captain T. A. Baldwin, United States Army, and receiving from him all the property belonging to the United States Government, excepting certain buildings located on what purports to be the agency reservation, formerly belonging to and occupied by E. J. Brown, a licensed trader, but now an adopted citizen of the Seminole Nation, but at that time confiscated by the United States Government.

#### CONFISCATED PROPERTY.

This confiscated property consists of a round log store-room, with a rough shingle clap-boarded shed and end attached, a one-story double-round log-house, of two rooms, without ceiling, inclosed with a split pailing-fence, and a well of good magnesian water in the yard; and two small buildings of the same kind, used for storing corn and hides—all in a dilapidated condition. These buildings, were erected by Mr. Brown, a licensed trader, in the fall of 1866, partly of houses purchased of the Creeks, and partly of timber purchased of the Seminoles, for which, with the privilege of trading with them, he paid them \$300 per annum. Subsequently to the erection of these buildings, a temporary building was erected in the immediate vicinity, for the use of the agent; but this location of the Government reservation was never approved by the superintendent or the Department of Indian Affairs. Some time in the fall of 1869, Mr. Brown moved into other buildings erected by himself, and on the 1st of February, 1870, he rented the old buildings to Mr. William Aird, a licensed trader to the Seminoles. On the 3d day of September, 1870, my predecessor, Captain T. A. Baldwin, United States Army, notified Mr. Brown that he had taken possession of the buildings, in accordance with instructions from the Department, in behalf of the United States Government. And Mr. Aird was notified not to pay rent to Mr. Brown. This is the way the matter stood when I came in possession of the office.

As the decision against Mr. Brown had been rendered by Acting Commissioner Cady, and as he (Mr. Brown) supposed a fair and impartial statement of the case had not been presented to the Department for its consideration, he deemed it proper to make a statement, supported by affidavits, and ask the honorable Commissioner himself to render a decision in accordance with the facts and the law in the case. This decision has been rendered and received, and is a confirmation of the decision rendered by Mr. Cady, turning the property in dispute over to the United States Government. Mr. Brown feels that an injustice has been

done him for want of an understanding of all the facts in the case, and that, if this decision is to govern traders, no one would feel secure in erecting buildings for purposes of trade on Indian lands where the Government had not yet located its reservation, as in the Seminole Nation; for at any time an agent or superintendent might locate the reservation so as to include his buildings, and he could not in any way dispose of them to the Indians or to his successor in trade, but, as in this case, they would revert to the United States Government. He claims that as the decision is based upon the allegation that the office of Indian Affairs at Washington has no evidence that Mr. Brown was doing business under a license from the 1st of October, 1867, to the 1st of October, 1869, he thereby forfeits his buildings to the United States Government. He can show extensions of his license by the United States agent, and approved by the superintendent, covering this interval; that on the 11th day of February, 1869, eight months prior to the expiration of his license, the Seminole general council adopted him as a citizen of the Seminole Nation, granting him the rights and privileges of a Seminole, a certified copy of which was forwarded to the Indian Department by Captain T. A. Baldwin, United States Army, then United States Indian agent, in a letter dated 25th October, 1869, the receipt of which was acknowledged by the Hon. Commissioner in a communication dated November 27, 1869. And on the 23d of September, 1869, in reply to a communication from Mr. Brown making the inquiry, W. F. Cady, Acting Commissioner, writes to Mr. Brown, saying that an adopted citizen of the Seminole Nation is not required to take out license to trade in the nation. Hence, Mr. Brown claims that he has never traded with the Indians since October, 1866, one hour, without license, or under instructions from the Department; and that his property cannot be forfeited on this ground; and as there is no defined and approved Government reservation in the Seminole country, and not even an agency building as good as a first-class Pennsylvania pig-pen, and this site selected and the buildings erected subsequently to those in dispute, certainly the Government can have no just right to them, or any claim upon them. There are other Seminole improvements, much better than the buildings in dispute, and nearer to the agency buildings, yet they remain unmolested by authority of the Government. As this property is still in dispute, Mr. Brown intending to appeal, the rent cannot be collected, nor any repairs made out of what is due as rent, without the possibility of involving Mr. Aird in pecuniary embarrassment. And it is for this reason principally, and in order that the facts may be fully understood at the Department, that I state the case in detail. For it is proper in all cases in dispute, and especially where an Indian or a citizen of the tribe by adoption is one of the parties, to present all the facts in the case fairly, in order that full justice may be done. In this case, if the decision is erroneous, Mr. Brown is liberal enough to believe it is for want of all the evidence bearing on the case.

#### POPULATION—NO PER CAPITA PAYMENT.

As there has been no per capita payment made of annuity to the Seminoles since I have been their agent, I cannot state their exact number; but I presume there has been very little increase of population since the last annual report, which, according to the last pay-roll, was 2,208.

#### TEMPORAL AND MORAL CONDITION.

The temporal and moral condition of the Indians, though they have

greatly improved in these conditions, will not admit of rapid increase. Their mode and habits of life, contrary to the general opinion, are detrimental to their physical growth and perfection; and consequently a gradual degeneracy, which, according to a universal law of nature, is imparted to the offspring. Some of these causes are exposure when the system is not in condition to resist the effects of such exposure; want of sufficient and the proper kind of clothing adapted to the different and extreme changes of season; living in dark, cold cabins, and on a diet often insufficient and unwholesome, and partaken at irregular intervals; and want, in a large majority of them, of cleanliness in their persons as well as in the preparation of their food; and then add to all these causes of physical degeneracy the greatest of all moral and physical evils—the promiscuous intercourse of the sexes, which is very common, thereby engendering disease, and transmitting it down through many generations, and we have the sum and substance of the seeds of ultimate extinction. The effects of these causes are to lower the stamina of the system, so that, when attacked by acute disease, the vital forces are more easily overcome and less amenable to appropriate treatment; and when treated by the “Indian medicine-man,” whose medicines are generally a pot of boiled herbs, which may or may not have any medicinal properties—and it matters not, for the potency seems to be in the blowing and “pow-wow-ing”—the case nearly always proves fatal; and thus many are cut off by disease that might, by proper knowledge and skill, be saved. I know it is generally thought that a wild roving life is promotive of health and robust constitution; but this must be accepted with many important qualifications. If this were true in the aggregate with respect to the Indian tribes of North America, where the nomadic life is characteristic to a greater or less extent of all the tribes, then there is no reason why the population should not have been much greater. The petty wars between the tribes would not be sufficient to account for the sparsity of population. It is, therefore, manifestly owing to their ignorance of the laws of health, and of disease and its treatment. If it be, therefore, desirable on the part of the Government and benevolent institutions that these tribes should be perpetuated, civilized, and christianized, and made useful citizens of this, or an independent government of their own, it would not only be an act of generosity and philanthropy, but of economy, for them to put forth every effort and use every means to accomplish these desirable objects. It is always more economical to perpetuate, civilize, and christianize, than it is to exterminate a race. But there is a higher duty than the mere matter of policy—a duty which enlightened nations owe to the benighted and ignorant by Divine injunction.

#### MORALS.

The moral condition of the Seminoles is evidently improving. Many of them are well-behaved members of Christian churches; and although the expiring scintillations of their former heathenish customs and ideas are yet visible in many cases, yet their desire seems to be to abandon their former irrational speculations about physical as well as spiritual things, as they acquire a knowledge of the true and substantial principles of what appertains to their moral and physical happiness. And it cannot be expected that their moral condition in the present, or even in the next generation, under any circumstances, directed by human government and Christian teaching, will come up to that standard of moral accountability adopted for the guidance of those who have been from their childhood trained under the keen edge of Christianity and

modern civilization. But it is a great consolation as well as encouragement to all who sympathize with, and desire the advancement in civilization, education, and Christianity of the ignorant and oppressed everywhere, to know that the principal and second chiefs, with most of the leading men of the nation, are not only active members of churches, but that they are vigorously putting forth every effort to obtain more of the light and knowledge of civilized nations, and abandon all those customs and superstitions, and idle and profligate habits as outgrowths of ignorance and heathenism, which have been the principal obstacles in the way of their growth in population as well as peace and happiness among each other. And to evince this laudable desire on their part, these two worthy men only a few days ago desired to know if I could not have the New Testament translated in their own language, so that a copy might be placed in the hands of every Seminole and Creek who could read; and at the same time they gave it as their firm conviction that by this means more would be done toward their advancement in civilization than by any other means now available. This is logical wisdom, and it should not be forgotten by those whose duty and privilege it may be to comply with such a reasonable and praiseworthy request.

So far as respect for law and moral obligation is concerned, the Seminoles will compare favorably with any other nation in the Territory; indeed, their civility and generally good conduct are proverbial throughout the whole country. Only two criminal cases have occurred within the last year that have come to public notice; one was a case of theft, and the other of murder; the former was punctually arrested and punished, but the latter has thus far eluded the most diligent search. Very few ever taste intoxicating drinks, even when they have access to them, and I have yet to see the first intoxicated person in the nation, of any color. Very few are addicted to the use of profane language.

#### MISSIONARY INFLUENCE.

And what has brought about this reformation in their conduct and morals? Most unquestionably it has been through the influence, the teaching, and example of the missionaries, a noble, self-sacrificing set of men and women, who should be well sustained, their efforts fostered and encouraged, and their comfort and happiness promoted by every means applicable to the purpose, and by every well-wisher of the poor, despised Indian. It is vastly more economical to sustain missionaries and mission-schools than to sustain armies. The one has inscribed upon its banner "peace and good will to men," and carries with it a moral and life-inspiring influence that tends to purify and ennoble the subjects of its grand mission. The other has inscribed upon its banner "submission or death!" which tends to engender animosity, resistance, and retaliation on the part of those whom it would subjugate; while, at the same time, it spreads devastation and contamination of morals along its blighted pathway.

#### THE MISSION BUILDINGS.

The Presbyterian mission building, designed for a manual-labor school, of which mention was made in last year's report, is now finished, and the school will open some time in October. Owing to unforeseen hindrances, the completion of this building has been greatly delayed, yet a purely benevolent society, dependent upon voluntary contributions for its funds, has nobly succeeded in erecting buildings for the comfort and convenience of its missionary and for the moral,

literary, and economical labor-training of Seminole children, while a wealthy and liberal Government has failed to provide comfortable quarters for its agent. After the rebellion had been suppressed, and a new treaty entered into between the United States Government and the Seminole Nation, and, as was supposed, the Indians settled again upon their new lands, purchased of the former, immediately west of the Creek lands, the Presbyterian Board of Foreign Missions decided to re-establish their mission among them. Accordingly, the Rev. J. Ross Ramsey, their former missionary, was sent out, and soon thereafter he was authorized to erect suitable mission buildings for the accommodation of the missionary and his family and twelve pupils, for which \$2,000 were appropriated. But this was found to be insufficient, and other appropriations were made to the amount of \$1,600 or \$1,800, for completing and furnishing the building, and for opening up and improving the mission reservation. For the support of the pupils the board has promised to give \$1,200 annually. It is thought by Mr. Ramsey that accommodations could be furnished in the mission building for six or eight additional pupils, if means were provided for their support. If the Department of the Interior could furnish the means to enlarge these buildings, and to open up more of the reservation, and to stock it, as recommended in my special report on the subject, there seems to be very little doubt of its ultimately becoming self-sustaining, if properly managed, so far as defraying the expenses of boarding are concerned, while, at the same time, it would confer a great benefit on the Seminole people in the way of training up their children in habits of industry, economy, and the art of agriculture. The board will supply the requisite number of teachers for any number of pupils. It is hoped that the Department will yet be able to render some assistance.

#### MISSION CHURCH.

In connection with this mission it is confidently hoped that a mission church will be erected this fall. It is thought that nearly a sufficient amount of funds for the purpose is now available, the individual Seminole members of the church having subscribed about \$250, to be paid principally in work, and the balance by friends of the mission and the Indians both here and abroad.

#### SEMINOLE SCHOOLS.

There have been four Seminole schools in successful operation during the past year—two Indian, and two colored. The teachers all report continued progress on the part of all the children, general good conduct in all the schools, and a deep interest in the education of their children on the part of nearly all the parents, but it is to be regretted that in many cases the example, precept, and influence for good of the teacher over the children are in a measure counteracted by the parents on account of some lingering prejudice against the customs and manners of the whites. This cannot be avoided in the district schools; and another difficulty has to be encountered, which is a great drawback in acquiring an education, viz learning the English, from English books, from teachers who do not understand and speak the Muskokee. On this subject, one of the teachers—Miss Keys—says: "It is well known that, with few exceptions—not enough to exert any influence in the school—the pupils all speak the Indian altogether, though now many of them can read the English language with ease. Had they knowledge of English I am sure their progress would be

marked with a wide difference. They are not wanting in mental capacity or proper energy; but to learn books and English at the same time is a two-fold undertaking, which I greatly fear many fail to appreciate. Such non-appreciation of the situation and difficulties the pupils have had to contend with on the part of parents are particularly injurious to the cause, and could only end in disappointment to both child and parent. Instead of this they should be encouraged in every particular, which, I am happy to say, has been fully given on many occasions with beneficial effect." I have not been enabled to visit the schools as often as I desire, and I cannot speak from personal knowledge and observation of the progress of the children; but all the teachers report favorably, and all seem greatly encouraged in their efforts, and with the generally good conduct of the children, their aptitude and desire to learn, and with the good wishes of the parents. Mr. Lilley says: "The progress and improvement has been good, so far as I can judge, and the capacity of the children I believe to be equal to that of other children in any country. The interest shown in the cause of education has not abated since my last report."

I find from some of the leading men of the nation, whose children have had no educational advantages on account of their remoteness from the schools, that they are exceedingly anxious to be favored with this important means of civilization; and it was with this object in view that the national council last winter asked the Department to aid them in the erection of school-houses at destitute places. If they had the school-houses at convenient points, most of the Seminole children could have the advantages of four or five months' schooling each year, by dividing the time of one teacher between two schools, which would not only be an act of justice, by giving all the benefit of the school-fund, but it would be better for the nation at large to give all an equal opportunity to educate their children, though the time required would be longer, than that part should have the benefit while the other half should be left wholly destitute. Some of the schools are frequently visited by the first and second chiefs, and addressed in words of encouragement. This is especially gratifying to all who are interested in the elevation of the Indian. For further particulars I respectfully refer you to the statistics on education.

#### FLORIDA INDIANS.

In reference to the Seminoles remaining in Florida, I would say that, at the suggestion of the honorable Commissioner, the general council last winter adopted a resolution expressive of the prevailing opinion that their brethren would be cordially received and welcomed among them, provided the United States Government would bear all the expenses attending their emigration to this country, provide for their subsistence until such time as they will be enabled to provide for themselves, and give to the Seminoles the additional quantity of land which they claim as due them in consequence of the inferiority of the land which they purchased of the United States Government at 20 cents per acre more than was paid for it to the Creeks, which resolution was forwarded to the Department from this office.

It would be very desirable to have all the Seminoles settled upon their own territory and under one government, so that all may have an equal share in their lands and annuities, and in whatever advantages may be derived from the present Indian policy.

## SEMINOLE TERRITORY.

Much excitement and uneasiness have been produced among the Seminoles in the last few days in consequence of the boundary line between the Creek country and the Government lands immediately west, which has just been run, throwing what the Government, as well as the Seminoles, has, since their settlement on it, recognized as their territory, with all the improvements, into the Creek country. But, being advised from this office, they have decided to remain quietly at their homes, gather in their crops, and prepare for winter, as though nothing had occurred to excite their suspicions of future trouble and loss in again having to abandon their homes and seek others in a new country. It is hoped that the Government will make provision for any contingency that may grow out of this unsettled difficulty, so that in any event the Seminoles will be permitted to remain at their peaceful and quiet homes unmolested by any one.

## MEDICAL STORES.

Soon after my arrival here it was ascertained that a family could not live comfortably on the salary allowed to agents, and especially without an agency building and reservation improvements, and in order to make up the deficiency, application was made to the Department for medicines and permission to practice. The permission was granted and the medicine forwarded. I believe that much good has already been accomplished by this means, as many cases have been relieved and cured that must have otherwise proved fatal. But it has another beneficial effect, and that is to show to and convince the Indians of the advantages and benefits resulting to many from the arts and sciences of civilization.

Nearly every day application is made for medical assistance, and much labor is bestowed in this way to as poor and thriftless a class of people as I have ever seen. There are some, however, who are not only able but willing to pay for this extra service; but this is nothing like an equivalent to the whole amount of labor performed in attendance upon the sick, yet I am willing to do the extra service so long as good can be accomplished and the Department will furnish the means.

## AGENCY BUILDINGS.

In reference to buildings at this agency suitable for the accommodation of the agent and his family, and for the equally important consideration of their comfortable maintenance, I would say that it will become necessary to adopt one of the following propositions: 1st. Funds must be furnished to have buildings erected, and a sufficient amount of the reservation opened up and improved, to insure, so far as may be, comfort, convenience, and health to the agent and his family, and to afford him an opportunity of keeping even with his creditors without doing violence to the interests of others; or, 2d. The agency must be abandoned; or 3d. The administration will be obliged to abandon one important feature in its Indian policy, of appointing as agents men whose aim in life is to "do unto others as they wish others to do unto them," or resort to the former custom of appointing politicians or other men who can manage to live comfortably under any circumstances and position in which they may be placed for the unenviable consideration of the "perquisites" of the office, which conscientious men never find among the emoluments of a salaried office.

## THE TERRITORIAL GOVERNMENT.

The Seminoles seem to understand so little of political government that, with respect to the Ocmulgee constitution and the government proposed to be organized under it, they think it best for them to await the action of the more enlightened tribes on the subject. They are afraid that the organization of a government under the Ocmulgee constitution would force them to submit to the sectionization of their country, and they think they are not yet far enough advanced in education and civilization to cope with the consequences that would arise from the adoption of such a policy. They understand that the Government desires them, through a course of education, to prepare themselves to become citizens thereof; and to this end they are making every effort, and they hope that nothing will be done by the United States Government, or by any of the Indian tribes in the Territory, to discourage them in their efforts and disappoint them in their expectations. If a government of the confederated tribes of the Territory would be advantageous in these particulars, and at the same time would be an encouragement to other tribes to join them in good faith, they will most heartily co-operate.

## PAYMENT OF ANNUITIES.

In order that the Indians may have the full benefit of the President's policy in appointing as agents persons nominated by the different religious societies, it is important that they should be enabled to carry out treaty stipulations faithfully and punctually; and one of the most important of these is the payment of annuities. A failure to pay when the annuity is due is attended with great disappointment as well as to the employes at the agency, and very often the Indians are obliged to sell their head-rights to clothe their nakedness and to supply them with necessary food; and sometimes, no doubt, they sell at a sacrifice. All this might be obviated by making the payments regularly every six months, while at the same time and by this means the Government and the agent would gain the confidence of the Indian, and by access to them in this way much more good would be accomplished. Many of the Indians make no distinction between the Government and the agent, and when the former fails the latter is held responsible by them. This reacts upon our usefulness; the teachings and precepts in morals are counteracted by the alleged example.

## AGRICULTURAL PRODUCTS.

The following is only an approximate estimate of the amount of land under cultivation, the quantity of agricultural products, with the amount and value of personal property pertaining to agriculture belonging to the Seminoles. As there is a strong prejudice existing in the minds of a large majority of the Indians against the Government in requiring the valuation of their property, I was under the necessity of depending upon a few of the most intelligent to assist in making the estimate. If it exhibits an increase over former estimates it is a matter of encouragement. From the most reliable information I can obtain, the Indians have planted a greater area this than last year, but, owing to the severe drought this summer, the quantity raised is less than last year. The corn and potato crops have failed to such an extent that it is thought

by those most observant that there will be want and suffering before another crop can be raised. The rice crop is an entire failure :

|                                                     |           |
|-----------------------------------------------------|-----------|
| 7,500 acres in cultivation.                         |           |

HENRY BREINER,  
*United States Special Indian Agent.*

Hon. E. S. PARKER,  
*Commissioner.*

---

### No. 115.

#### OFFICE OF UNITED STATES INDIAN AGENT, *Chippewa Agency, Minnesota; November 8, 1871.*

SIR: I have the honor to submit herewith my annual report for the year 1871.

The Chippewa agency comprises four distinct bands of Chippewas, who are provided for by three distinct treaties, or series of treaties. They number, according to enrollment first taken, 5,736 Indians, as follows: Mississippi bands, 2,139; Pillager and Winnebagoishish bands, 2,001; Red Lake band, 1,049; Pembina band, 547. The Chippewas of the Mississippi are widely scattered, and include those living at White Earth, Oak Point, Gull Lake, and Mille Lacs. The Pillager and Winnebagoishish bands reside mostly about Leech and Cass Lakes, and the Red Lake and Pembina bands reside respectively at Red Lake and Pembina.

The Chippewas of the Mississippi are possessed by treaty of large tracts of land, aggregating not less than one hundred townships, of which not more than sixteen townships are susceptible of cultivation. The remaining portion of territory consists of marshes and wooded land. On the latter are about 75,000,000 feet of pine timber, standing within reach of such streams and lakes as will make the timber marketable.

Nearly all the agricultural land belonging to the Mississippi Indians is in the White Earth reservation, and is occupied at present by only five hundred Indians. The soil is excellent and the country finely diversified by prairie, timber, and lakes. Here the experiment has been tried for four years of inducing the Indians to cultivate the land, but under many difficulties and with limited success. During the past season a new spirit of thrift and industry has been inspired, and very happy results have been realized. The subdivision of fourteen townships into 40-acre tracts, which, in accordance with the treaty, are to be deeded in fee-simple to each Indian who will put 10 acres under cultivation, has

stimulated the taking of claims and the erection of dwellings. Thirty substantial Indian houses have been erected and completed this season, together with an office building, a physician's house, overseer's house, and miller's house. A large two-story school-house, capable of accommodating 35 boarding pupils and 40 day pupils, with stable and out-buildings, has also been completed.

Four hundred thousand feet of lumber have been cut, driven to the mill, sawed, and transported from six to eight miles for construction of buildings; 150 acres of prairie have been broken, 400 tons of hay cut and stacked, and 500 bushels of wheat, 1,000 bushels oats, 1,000 bushels potatoes, 1,000 bushels turnips, 150 bushels corn, 50 bushels beans, with good supply of squashes, melons, onions, carrots, and other vegetables, harvested. The corn crop was nearly a failure and the wheat and oat-crop largely injured by the grasshoppers.

With the exception of the carpenters engaged upon the school-building, this work has been done by the Indians living upon the reservation, directed and assisted by the Government employés.

The superintendent reports that they are always ready for any work he has to offer, and that, with scarcely any exception, the begging at White Earth during the past summer has been always for work. There are fifteen farmers to whom I have promised to secure a deed of 40 acres, they having each put 10 acres or more under cultivation. This Indian labor, while it has ever been cheerfully wrought, is altogether inexperienced, and therefore more expensive than white labor, but the benefit secured by the Indian, in teaching him how to work for himself, has vastly more than compensated for the additional expenditure.

Educational privileges at White Earth have been very limited hitherto, greatly to the disappointment of the Indians and contrary to the provisions of the treaty. The erection of the commodious school-buildings and the opening of the school have awakened a deep interest in educational matters. The building will accommodate all that the funds of \$4,000 per annum will provide for. It is already full, while not one-half of the school-children now at White Earth are accommodated. When the population is increased by the removal of other Indians, the need will be still greater. There should be another building erected and furnished at once at a cost of \$8,000 for a boys' school, and a fund of \$4,000 per year provided for its support. A school-farm of 50 acres of excellent land affords employment for the boys and a large part of the supply for the table. The girls are taught house-work in the labor of the boarding department.

The Gull Lake bands of Mississippi Chippewas, numbering 259, are living off their reservation, and are becoming hopelessly demoralized by the bad influences around them. They can be removed to White Earth, where they belong, as soon as transportation and subsistence can be furnished and the necessary preparation made in the erection of houses and breaking land at their new homes. Every interest, both of the Indians and the public good, as well as good faith on the part of the Government, seems to require that the necessary appropriation should be made at once.

The Mille Lac bands of Mississippi Chippewas still reside on their original reservation, the title to which they ceded in 1863, reserving the right of occupancy during good conduct toward the whites. There have been, from time to time, individual complaints made against them for trespassing in the adjoining country. For the most part this trespass has been a violation of the game-laws of the State. Unfortunately for these Indians, their reservation is rich in pine lands, which makes them

the prey of lumber-dealers, and a strong pressure is kept up on all sides to secure their early removal. During the past year, by some misunderstanding, (or possibly with a clear understanding at the local land-office,) this reservation has been open to entry, and large quantities of pine lands were covered with fraudulent pre-emption claims. On the order of the Land Commissioner these claims have been vacated, with the exception of a few held by persons who claim to be actual settlers. From the best information I can get I am convinced that these also are perpetrating a fraud upon the Secretary, as well as upon the Indians, and that there is not, and has not yet been, an honest pre-emption claim made upon the Mille Lac reservation.

There is little doubt that, owing to the presence of this valuable pine, the efforts on the part of the whites to get possession will not be relaxed, and it cannot be long before a sufficient pretext will be found to enforce their removal. I have as little doubt also that the best interest of the Indians will be promoted by their early removal to the White Earth reservation. An appropriation should be secured sufficient to transport and subsist them, and to make suitable provision for their beginning to live at White Earth, by erecting houses, breaking lands, and furnishing agricultural tools. Not less than \$100,000 will be required for this purpose. More than twice that sum can be realized from the pine timber on the Mille Lac reservation, if it is put on sale under sealed bids, and I earnestly recommend, as the easiest way out of the difficulties in which this reservation is involved, that the timber be at once removed from the land, leaving the fee in the Government and the right of occupying in the Indians until their removal to White Earth. The Indians would readily consent to the immediate sale of the pine for the benefit of their Great Father, and when the reservation is once laid bare of its tempting wealth it will be no longer in demand for pretended settlement, there being scarcely any part that can be properly called agricultural lands.

There is one other plan for the Mille Lacs, which is deemed feasible by friends here who have considered their condition longer than I. To give them in severalty so much of the reservation as they can occupy, at 160 acres for each adult male and 80 acres for each unmarried female over 18 years of age, and sell *all* the pine under sealed bids, either for the benefit of the Indians for agricultural and educational purposes, or for the benefit of the Government. In this latter case the Indians should agree to have their annuities hereafter spent for their benefit in schools and agriculture instead of receiving money in hand.

The White Oak Point Mississippi Chippewas, comprising what were formerly known as Rabbit Lake and Sandy Lake Indians, I find in a more deplorable and hopeless state than even the Gull Lakes. They have suffered by a removal which was entirely a fraud upon the Government and the Indians. Under claim of bettering their condition by placing them on agricultural lands, they were brought to one corner of their reservation and subsisted six months, a half dozen houses were erected, and less than 40 acres broken up; all this at a heavy cost to the Government and without the least benefit to the Government or the Indians. The 40 acres include all the land at that point which is susceptible of being plowed. Just upon the border of their reserve they are out of the reach of all civilizing influences, and, under the demoralization of the lumber camps around them, are becoming degraded in all respects. Some of them may be induced to undertake another removal and go to White Earth. The necessary expense of such removal can be

provided for by the sale of the pine on their reservation, of which report will be made further on.

The Pillagers and Winnebagoish bands of Chippewas live around Leech Lake, with the exception of 358 Pillagers living in Otter Tail County and 139 who are at White Earth. The Otter Tail bands are constantly in trouble with settlers, and should be removed in the spring to White Earth. An appropriation of \$15,000 will be required for this purpose. For turbulence and general worthlessness of character these Pillagers have had a growing reputation for many years. They have burned their saw-mill, broken up farming-tools, killed their oxen, robbed the warehouse, and attacked employes with impunity, and some of them, during the last winter, held councils with other Indians for another raid upon the whites. Finding that a large share of this bad conduct was due to the influence of a few ring-leaders I had them arrested. They escaped the guard, but afterward came in and promised good behavior and were released on parol. I am happy to report that this little show of firmness and prompt action with these marauders has resulted most favorably in its effect on all the band, while the turbulent ones have become quiet and seem well disposed. There are many difficulties in the way of the improvement of the Pillagers. Their reservation is a barren country, with only here and there a patch of ground susceptible of tillage. The few gardens which have been cleared are scattered on all the shores and inlets of the lake, and are accessible only by canoe or steamboat. It not unfrequently costs \$20 to cross-plow a half-acre garden. There are, however, points on the lake where 100 and 150 acres of hard-wood land can be found in a body and cleared up into good farms if the adequate means can be provided. The funds for this purpose can be raised from the sale of the pine timber standing on the reservation, of which I shall report further on. The steamboat on Leech Lake, so essential to the Pillager reservation and also for transportation to the Red Lake and Oak Point reservations, is a dangerous and expensive affair. Three miles per hour, with favorable wind, is rapid headway for her. During the summer, one hand has been employed almost daily at her pumps to keep her afloat at her dock. I recommend that a small tug be purchased, and that the engine be taken out of the present boat and sold and the hull used for a barge. A tug suitable for this lake will cost, delivered on the lake, \$6,750. It is essential to the administration of the agency for the Pillagers that this boat be furnished. At the best, the old boat cannot run longer without extensive repairs; and without the constant use of a boat the Pillager reservation must be abandoned.

There can but little be done toward inducing these Indians to build themselves houses without a saw-mill. All the lumber now used for dwellings and grain-houses must be transported one hundred miles over rough roads. With what material and machinery remains of the former mill, \$4,500 will be required for a saw-mill. The expense should be provided for by the sale of pine timber on the reservation. I inclose herewith the report of the teacher of the school at Leech Lake. I am able to confirm Mr. Strong's statements respecting the commendable progress which the pupils are making. I regard this school as the hope of the Pillager bands. If I had the means to increase its capacity four-fold, I could fill it at once with boarding pupils.

A single summer in the school makes a striking change in an Indian boy, and does more to identify him with the customs of civilization than ten years of help from the Government in the ordinary way. I took an orphan boy in July—a most unpromising product of the wig-

wam—filthy, naked, and in primitive ignorance, to the school. In one hour Mr. Strong brought him to me with hair cut and neatly dressed. I named him Columbus Delano, and put him in the boarding-school. He had been a pupil but five weeks when, before the board of visitors, he put sentences from his reading book, in a neat hand, upon the black-board, and read them distinctly. Except in name, I do not regard young Delano superior to the average Indian boy. If the means were furnished, I could put two hundred promising children under good influences in this school, and in a process of training that would prevent their relapse into the wigwam. I firmly believe this school can be made to solve the problem as to what is to become of the Pillager Indians; and that by far the most economical expenditure the Government can make for them will be to increase the fund for this school \$10,000 per year, and allow me to put two hundred pupils in the way to civilization. This process continued ten years will lift the whole tribe out of its dependency.

The Red Lake and Pembina Bands of Chippewas entered into a joint treaty in 1863, in which they ceded a part of the lands of the Red Lake and all that of the Pembinas; consequently the Pembinas are living in Dakota without any reservation, unless the Department shall recognize the claim of the Turtle Mountain band of Pembinas, who, at the time of the treaty, were living west of the line of the ceded territory, and would seem to retain all the natural rights which Indians ever acquire to territory. They ask that this Turtle Mountain country shall be acknowledged to them as their reservation. The whole number of full-blood Pembina Indians will not exceed three hundred. They are a constant annoyance to the settlers at Pembina; a straggling, wretched, homeless people. Some of them can be induced to settle at White Earth, if provision for their removal can be made. Others will go out into the Turtle Mountains if they can be allowed to call it their reservation. It has been the custom hitherto to enroll all the half-breeds with the Indians, swelling their roll to 1,000. This year I cut off many of these half-breeds, and reduced their roll nearly one-half. Another year the roll should bear only the names of full-blood Indians, and the half-breeds should be advised, and helped if need be, to take claims and live by farming.

This country has afforded a wide field for operating in Lake Superior half-breed scrip. Speculators from St. Paul have been through the whole country, inducing the half-breeds to apply for this scrip as Lake Superior mixed-bloods. Without understanding the papers they were signing, they have made such application and given power of attorney to locate the scrip, receiving therefor the nominal sum of from \$10 to \$25, and sometimes, though rarely, as high as \$40, and more frequently only a promise of pay. According to the ruling of the Department, by this act of ignorance on their part and fraud on the part of the scrip-dealer, they are cut off from further receipt of scrip, and are not allowed to participate in the benefits of the treaty made expressly for them in 1863, by which the mixed-bloods of the Red Lakes and Pembinas were to receive 160 acres each. It seems a hardship that they should thus be made to suffer through the crime of others. I earnestly hope that, so far as possible, these mixed-bloods of the Pembina bands, who are entitled by the treaty to this scrip, may be allowed to receive it. Very many of them would use it to acquire homesteads in that country, which is now opening to settlers.

The Red Lake bands of Chippewas have raised good crops of corn and potatoes the past year. The narrow belt of arable country about the

lake is too limited to allow of more than five acres to the family, and affords no grass lands for stock. At the present time the clearings in this belt of fertile soil are sufficient for only two acres to a family, and the work of clearing the hard timber is very heavy. Some of these Indians are anxious to get out upon the prairie, where they can find more land to cultivate; others are anxious to have their present hard wood cleared off. Under the superintendence of Mr. Wright, the former teacher at Leech Lake, a good summer's work has been done. Twenty-five log-houses have been put up by the Indians themselves. They are rude structures, indeed, but, considering the want of tools and inexperience of the workmen, they are creditable specimens of architecture. These Indians are eager for three things: tools of all kinds, more land to cultivate, and a school.

There is no provision in their treaty for education. A full school can be easily gathered. All the reasons urged and the opportunity for a work of education presented for Leech Lake are applicable here. More can be done to lift these Indians out of barbarism by the boarding-school than by ten times the expenditure in any other way. The pine timber on this reservation, if rightly disposed of, can be made to meet these wants.

The boundary line of the reservation has never been run, and a question of jurisdiction is already raised by the parties who are cutting timber on what is thought to be a portion of the reserve. I deem it quite important, in order to protect the rights of this band, that the southern and southwestern boundary lines of their reservation should be established in early spring.

The present communication with Red Lake is by way of Leech Lake. During four or five months of the year this way is impassable, except by canoe or the foot-trail. The transportation of supplies by wagon two hundred miles is necessarily expensive. With the headquarters of the agency at White Earth, it will require a distance of two hundred miles to accomplish seventy-five. The country in direct line between White Earth and Red Lake offers a good road at comparatively small cost. An estimate, which I regard as reliable, places it \$3,500 for the seventy-five miles. Supplies brought through by rail to Oak Lake can then be taken to Red Lake at one-third the cost of the present transportation. I hope the appropriation required for this road may be secured.

The pine lumber which abounds on some portions of the different reservations will be a source of great annoyance while it stands. It is a perpetual object of greed to lumber-dealers, who intrigue to get it, either by the removal of the Indians or by bargaining with the bands or individual Indians. The pine itself is rapidly wasting under the fires which run over the country every year. In the settlement of the Red River country and the growing demand for lumber in the State, all this pine can now be cut at remunerative prices, and made to furnish no small income for the benefit of the tribes. I recommend that the Department assume discretionary control of all the pine timber on the reservations and take measures to bring it into market, stating definitely to the Indians for what purpose it is cut and what use will be made of the proceeds. In this way the greatest benefit for the Indians will be gained, and I am confident they will readily acquiesce when they are made to understand their Great Father is exercising his right of guardianship for their good. The pine in the Pillager and Mississippi reservation, accessible to driving streams, is not far from 150,000,000 feet. The Red Lake pine will amount to from 50,000,000 to 75,000,000 feet. The proceeds from this timber, applied mainly to agricultural and educational

purposes, will go far toward helping the Indians to civilization. The course here recommended is based upon what I deem to be the true policy to be pursued with the Indians. They are no longer a hostile race to be conciliated, nor an independent and sovereign people. They are a part of our own nation—the wards of the nation—depending on the Federal Government not only for means of living, but also for protection and government. They have no laws or government among themselves. Personal retaliation is their only restraint. If they commit depredations on one another, or on the whites, there is no redress except that found through this agency. Practically, then, they are not a separate people, but the dependents of our nation, and it would seem the the part of wisdom and humanity to assume the right to put their disbursements in the best form for them. The sight of a camp of Indians with annuity money in hand in haste to be rid of it, and often intoxicated, is most humiliating and discouraging. It will surely be the part of wisdom in all future arrangements with Indians to have money in hand no part of the consideration.

I have found it impossible to adopt adequate means for the punishment of crimes against the Indians, and crimes committed by the Indians, for want of funds applicable to such use. Three Indians have been killed by other Indians off the reservation, and two have been murdered by white men, and two white men have been shot and severely wounded by Indians during the past season, and none of the perpetrators of wrong have been arrested. Whisky is sold freely on all sides to the Indians, endangering the safety of employers on the reservation, and hindering, and often thwarting, all efforts for good. I have secured the arrest of a few of the whisky traders. Their trial will occur in January next. But the business in intoxicating liquors is carried on under such cover that it cannot be detected and sufficient evidence for conviction procured without the services of special detectives. I would respectfully call the attention of the Commissioner both to the need of a larger appropriation for the punishment of crimes against Indians, and for an amendment of the law against selling intoxicating liquors to Indians, such as shall declare the keeper of a drinking-house responsible for the sales made on his premises by his clerks and employes, and which shall increase the fine to \$500, and provide that one-half thereof shall be paid to the informer. With the law thus amended, I am confident I can render sales of whisky to Indians far less frequent in this agency.

If legislation is required for that purpose, I would also recommend that an act of Congress be secured, authorizing the issue of patents of lands in the different reservations, the fee being inalienable for twenty years, to such Indians as are ready to live by farming.

Owning land in severalty proves a strong incentive to industry and thrift.

All of which is respectfully submitted by your obedient servant,  
EDWARD P. SMITH,  
*United States Indian Agent.*

Hon. H. R. CLUM,  
*Acting Commissioner of Indian Affairs, Washington, D. C.*

## No. 116.

LEECH LAKE, CASS COUNTY, MINNESOTA,  
August 10, 1871.

SIR: I have the honor to submit, agreeably to your request, the following, as my report of the boarding-school for the quarter ending June 30.

My school is an Indian boarding-school, sustained by the United States Government. By treaty with the Pillager bands of Chippewas, the Government appropriated \$3,000 annually for educating Indian youth in letters and arts of civilization. My pupils are taken mostly from the wigwams of their parents into the boarding-school. They are boarded and clothed at a cost of \$3 25 per week each. During the quarter 24 names were registered as pupils; of this number three were boarded at the home of their parents, and 21 have been boarded and clothed at the school; in the aggregate, 273 weeks.

My predecessor taught in both the English and Chippewa languages. At the commencement of the quarter the pupils had not made much progress in using the English language. They could, however, read, but quite indistinctly, and with a voice at times hardly audible.

My teaching has been wholly in the English language. I have drilled the pupils with diligence and care on the elementary sounds of our language, and have aimed to cultivate the organs of speech that are used in the vocalization of English words, as of the first importance. In this respect I have not been disappointed in the result, for they have made, in a short time, very perceptible progress in a clearer articulation and correct enunciation of English words. This quality of teaching has also served to inspire confidence in the pupils themselves, so that now they talk and read with a voice sufficiently loud. The more advanced scholars use the Lincoln Reader, which corresponds with the Second Reader of Sanders's series. Sanders's Speller is the text-book for spelling twice a day. The pupils also spell, in connection with the reading exercises, by writing words on their slates as they are pronounced to them. The spelling is usually correct, and some rarely ever misspell. Their writing is in a fair, plain hand. This class has taken lessons in arithmetic as far as multiplication. They can all repeat the multiplication table. The younger boys have learned the letters of the alphabet, and can read in words of one syllable. In a short time the members of this class learned to print their lessons upon the blackboard as neatly as pupils of the same age can do in schools in the States. The pupils spend five hours a day in the school-room in study and recitations—three hours in the forenoon and two in the afternoon. About two hours in a day are usually spent in manual labor, cultivating the garden, sawing wood, &c. The pupils are cheerful and pleasant, and more easily managed than pupils in village schools in the States. They very seldom quarrel or disagree among themselves. When we consider the wigwam influences with which they have been surrounded, and are still, to a considerable extent, their behavior, both in and out of the school-room, is all and even better than we might expect. In some respects the future of my school-boys looks bright, and then, in other respects, I tremble for them, and fear the expectations of the Government in their education will not be realized. In this school the pupils adopt the modes and habits of civilized life. To live in this way involves greater expense than the mode of life that the savage is accustomed to. The blanket wigwam Indian can subsist at a very much less cost than the civilized Indian. The former can live in idleness and

brave hunger almost to starvation with a fortitude hard to be overcome by labor; but the latter can no more subsist on the fruit of idleness and not suffer than the white man can. His necessities in his new mode of life must be met at the expense of industry. You are aware that the lack of encouragement to develop industry in the pursuit of agriculture is very unpropitious in this reservation, on account of sterility of soil. The land is worthless for agricultural purposes. This reservation is wholly unfit either for the white man or the Indian to live on, if a subsistence is to be derived from the pursuit of agriculture. The scope of country is good for nothing, save for the pine forest and fish with which it abounds. So long as the Indians occupy this land they will continue to be a low class of thievish, begging Indians, dependent upon Government supplies and fish for a precarious subsistence. Government will succeed, no doubt, in giving my pupils a fair and even good English education. They may become as well educated and civilized as the children of the frontier white man. These children cannot always be sustained in the school. The time will come when they must leave the school to battle with the stern realities of life. The question arises, How are these boys to get a living in the future? Government cannot continue to support them in the new and higher modes of life which they have already gained at the expense of Government. I can see but very little that they can do on this reservation to get a comfortable living according to the mode of civilized life. These boys, when they leave the school, can do nothing of consequence to secure a comfortable living here more than to lounge around these lakes to catch fish and make this their daily food. In a short time they would doubtless drop back into their wigwam life, and become the more dissolute and worthless, just in proportion to the amount of the educational advantages that have been bestowed upon them by Government. If my school were situated in a good agricultural region, and on a farm of 160 acres, I should cherish high expectations that the most of the pupils would make a practical good use of their education, in living upon the fruit of their labor in the cultivation of the soil in their after-life. Then they could easily be transferred from the school-room to a farm of their own, and, by a little assistance from the Government, make themselves permanent homes, and become citizens who would be an honor to our nation.

If it became me to impart advice unto your honor, I should advise you to importune Government to remove this school without delay to the White Earth region, and place it upon a farm. Then, instead of supporting from sixteen to twenty pupils on the \$3,000 appropriation, twice or more than twice that number might be supported with no greater expense, as the boys could work that rich soil, raise grain, vegetables, and nearly all the supplies necessary to carry on the school, except groceries and clothing, which, for this school, are now mostly brought from a long distance, involving a heavy expense. Then the moment the boy became a man and left the school, he could place himself right upon a farm, and, with a little help and encouragement from Government, he would be likely to make himself one of the independent farmers of the West, near the Northern Pacific Railroad, soon to be one of the great thoroughfares of our nation.

I am, with much consideration, your obedient servant,

J. C. STRONG,

*Teacher United States Indian Boarding-School.*

Major E. P. SMITH,  
*United States Indian Agent.*

No. 117.

OFFICE LAKE SUPERIOR INDIAN AGENCY,  
*Bayfield, Wisconsin, November 1, 1871.*

SIR: I have the honor to submit the following general report of affairs in this agency, which includes the Chippewas of Lake Superior, numbering, according to statements of the chiefs of the different bands, 4,134, and the Boise Forte bands, which numbered in January last 991, making a total of 5,125.

November 17, 1870, Brevet Lieutenant Colonel J. H. Knight, my predecessor in office, completed the transfer of records and property pertaining to the agency, and I entered on the full discharge of my duties as agent.

FOND DU LAC BANDS.

Before the above date I accompanied Colonel Knight to Fond du Lac, Minnesota, and witnessed the payment of annuities to the Fond du Lac bands. In the council the Indians presented several matters for consideration, chief of which was the alleged trespass and damages inflicted on their reservation by the Northern Pacific Railroad Company.

The instructions of the Department to my predecessor, dated June, 1870, required that this company, before commencing the construction of their road across the reservation, should give satisfactory bond to pay for the right of way. These instructions I found had not been complied with, and when I assumed charge of the agency the road was finished across the reservation. It was therefore impossible for me to enforce compliance with the instructions, and I so reported to the Department. Though I have diligently labored to effect it, no adjustment of this claim has yet been made, the representatives of the company refusing to pay until after a new survey of the reservation has been made. The grounds of their refusal seem to me insufficient, and I shall at an early day submit a special report setting forth the facts.

The Indians are restive and dissatisfied, and, in my opinion, unless some settlement is made protecting their interests, there is danger that they will commit depredations on the property of the company. My influence has hitherto kept them quiet, although I have been unable to give them any definite assurance when their rights will be recognized and their claims paid.

The proximity of the railroad has been a fruitful source of demoralization to the Indians. Many of the laborers seemed to practice every vice of civilization, without possessing a single virtue, and to consider the Indians their legitimate prey. Long and patient effort under the best influences will be needed to raise these people from their present degradation. I am glad to say that the past year shows a perceptible improvement, in some respects, relating particularly to their material condition. They have raised a fair crop this year, about 60 acres having been under cultivation. Most of them have enough subsistence for the winter, and some will have plenty of corn and potatoes for seed. During the year they have built a road seven miles in length. Three new houses have also been finished, with some assistance from me. The lumber for floors, &c., was sawed by hand by the Indians themselves.

The use of intoxicating liquors has decreased, the head chief and many of the best men having used their influence uniformly against it. Last December I found two men on the reservation in the guise of homestead settlers, they having been enabled to secure certificates as

such by an imperfection in the records at the local land office. I lost no time in effecting their removal. They were very bad men.

#### BOIS FORTE BANDS.

The reservation belonging to the Bois Forte Indians is located about one hundred and twenty-five miles from the nearest settlement, and is difficult of access. It had never been visited by an agent, but in November I was enabled, by the prompt action of the Department, to send the Indians intelligence that I would deliver their annuity goods to them at Vermillion Lake, in January. In view of their reported starving condition, \$1,500 worth of provisions was also purchased for them, to be paid for out of their annuities for the current year. This was at their urgent request, and by the approval of the Department. The goods and provisions were delivered to them according to promise, and their satisfaction and gratitude were to me sufficient recompense for the difficulties of making the journey to their country in the winter. After delivering the goods and provisions at Vermillion Lake, beyond which there is no road whatever, I proceeded, with an Indian guide, to their reservation at Net Lake. The second day of our journey I arrived at the west shore of Pelican Lake. Here I found the blacksmith-shop, school-house, and eight houses erected for chiefs, agreeably to the provisions of the second clause, third article, treaty of May 5, 1866. All these buildings I found deserted; the first because the teacher had never been there, and was then engaged in keeping a trading-post many miles distant, where the only educational aid he gave the Indians was the art of calculating how many pounds of flour, at 20 cents per pound, they could buy for \$1. The blacksmith shop at Pelican Lake had never been used. The houses were unoccupied because surrounded by heavy forests. The Indians, having no land cleared there to cultivate, and having been always accustomed to a roving life, and obliged to depend on fishing and the chase for subsistence, could not live here.

The \$800 per annum promised by treaty to these people, to aid and instruct them in agriculture, appears to have been regularly appropriated, and I have been informed that a person was supposed to be employed in the capacity of farmer for them for several years, who never went within a hundred miles of their reservation. The Indians themselves have a tradition that a person once visited them, claiming to have been sent as their farmer, but that he staid only one night at the reservation. Certain it is that I found neither team, plow, hoe, nor other means to cultivate the soil. On exploring the reservation, I found that perhaps 1,000 acres of the 100,000 were adapted in some degree to agriculture; that the remainder consisted of water and swamps, with some meadows producing wild grass, and some rice-fields. The prospect seemed altogether discouraging when I reflected on the fact that there was not a rod of arable land cleared, no tools to work with, no team belonging to the Indians, not an experienced workman within a hundred miles, and about a thousand Indians roaming through the country, to provide for. On the other hand, these people seemed to realize their present condition and future prospects, and were disposed to settle on their reservation. By my advice, they set apart a portion of the provisions I delivered to them, and placed it in charge of one of their chiefs, to be issued only to those who should go to the reservation, and engage in claiming land. I could get no white man to assist and direct them, but a delegation of them set out in the dead of winter, to attempt work entirely new, in the hope that they could raise a crop this year. Con-

trary to my hopes, I have not been able to revisit them the past summer, but I have reports showing that they cleared about eight acres of timber-land, and, notwithstanding a very unfavorable season, have raised a considerable quantity of potatoes and other vegetables, and are in an altogether improved condition. Early in the season I sent a farmer and teacher to their reservation. Their experience has been necessarily trying, but not altogether discouraging, and there is every reason to expect more favorable results in the future. Both farmer and teacher are Christian men, who engage in the work from the highest motives of duty.

I have succeeded, after much difficulty, in finding a competent blacksmith, who has taken the place of the inefficient one I discharged last spring.

I have said that about 1,000 acres of the Bois Forte reservation are in some degree capable of cultivation. But, in my opinion, if all this land were cleared and subjected to the best processes of agriculture, it would hardly support comfortably the bands to which it belongs. Their past means of subsistence have been game, furs, fish, and wild rice. Game and fur-bearing animals are rapidly diminishing, the former having almost disappeared. Neither fish nor rice offer a reliable source of support. Existence itself is at stake with these people. They invite civilization, but they are too poor to do much for themselves. If they are ably simply to overcome the habits and customs sacred to them from inheritance through a long line of ancestors, they will do nobly. They cannot succeed without encouragement and material aid. Their needs and disposition alike supplicate the generous attention of the Government. They need help to clear their lands, teams and tools to work it, and seed to plant. They perfectly recognize that their only future hope lies in their cultivation of the soil and general adoption of the habits of civilization. They are like obedient children, and their appeal should be favorably received. Their improvements already made are not on the reservation, though on lands which they intended it should embrace. They desire that the western boundary of the reservation should run along the western shore of Net Lake; that the eastern boundary should be removed a corresponding distance eastward; and the northern and southern boundaries extended to meet the same. By this change their original intention would be fulfilled, a somewhat greater area of agricultural land given them, and the conditions of the treaty complied with. These provided that their reservation should comprise not less than 100,000 acres, and should inclose Net Lake.

I earnestly recommend that the above changes be made as they request. No additional expense will be entailed by this change.

The transportation of goods and provisions to Vermillion Lake last year cost 4 cents per pound. I was enabled to get it so cheap, because the conductor had machinery to haul back. Probably I shall not be able to make a contract at less than 7 or 8 cents per pound the coming winter. I cannot get even these terms, unless I promise to clear out the road, which during the summer has become obstructed by fallen trees, in some places causing its entire obliteration. This will cause an expense of from \$500 to \$700. I propose, with the approval of the Department, to transport the goods by purchasing oxen from the transportation fund, and building sleds for the conveyance of the goods and provisions. This plan will cost about the same as a contract at 8 cents per pound, and the Indians will have the oxen left to use next year.

The condition of the road between Lake Superior and Vermillion Lake should be improved. It is now a mere path, wide enough for

the passage of a single team. Every tree that falls near is liable to obstruct it.

The cutting out of the road 60 feet wider and the grading of a few of the steeper places would effect a vast improvement, and the cost would bear but a small proportion to the greater ultimate expense of transportation if the road is left in its present condition. The public lands in that section will not soon be settled or sold, unless a road is opened, though the country is of a character highly appreciated by an excellent class of our foreign immigrants, and capable of supporting a large population.

I have heretofore called the attention of the Department to the fact that the warehouse and agency building provided for by the treaty have never been erected. The Indians are anxious that this should be done, and the interests of the Government seem to demand it, there being no place to store supplies securely nor to make annuity payments, and transact other necessary business. I respectfully renew the application for the appropriation of the sums promised in the treaty to erect these necessary buildings.

I shall not make the annuity payments to the Bois Forte bands until winter, and consequently shall be obliged to present the enumeration as it stood in January last. If there is an apparent decrease from the enumeration of 1870, it should be accounted for by the fact that the names of about eighty persons, hitherto enrolled, and paid as belonging to these bands, were discovered by me to belong to the British possessions, and their names were consequently stricken from the roll. The increase by births last year, according to the statement of the chiefs, was eight, and the decrease by deaths three, leaving a net increase of five. From all I can learn, these bands are slowly but steadily increasing in number, and so I may remark here are all the bands belonging to this agency.

#### GRAND PORTAGE BANDS.

The material condition of these Indians, compared with that indicated in the last report, shows improvement. A much larger area of land has been under cultivation, the fishery has been productive, and the harvest of wild rice abundant.

Owing to the remote location of these people, I have been able to aid them to a limited extent only. They evince an earnest desire to become civilized, and have proved themselves worthy of more aid than I could bestow. Their reservation is not adapted to the purposes of agriculture, and their fisheries cannot be made sufficiently productive to justify the permanent settlement of these bands there. In time they will appreciate this, and they should then be moved to a more favorable location. This contingency ought not, however, to prevent the use of means for their civilization. Much can be done toward elevating them, even in their present location. I hope, through the co-operation and aid of the American Missionary Association, to secure a missionary teacher for these people. The officers of the association are endeavoring to find a suitable person for the place, and have promised to bear a share of the expense.

#### RED CLIFF BANDS.

All the Indians of these bands on the reservation live in houses. A large number connected with them live in the vicinity, but not on the reservation. One entire band has been for some years in the interior, living a roaming life, and only coming to the reservation at the time of

the annuity payment. The majority of this band will come into the reservation next spring to open farms. They are very much encouraged since seeing the prosperity of those already there.

When I assumed charge, I found this reservation in a discouraging condition. Most of the land cleared ten or fifteen years ago had been so neglected for years as to present the appearance of a young forest. No land was plowed last year except a few "patches," by the Indians themselves. There were no fences, no agricultural implements, and, worse than all, the Indians seemed to have utterly lost hope and self-respect. Beggars flocked to me in scores. I was empty-handed. Some professed a willingness to work. By authority of the Government, I gave them permission to cut and sell wood from the reservation, a privilege which had heretofore been denied them. During the winter they chopped and hauled nearly a thousand cords of wood, about 10,000 rails and fence-posts, and nearly 300,000 feet of logs for the Government saw-mills. All this work they did themselves without oversight or supervision of any kind, and it was all well done. Their courage returned, and during the past season they have toiled manfully to improve their condition. Their habits of life have improved; they have gained in self-respect; beggars are rare; the relations of the sexes are assuming a higher position; education is better appreciated, and there is more thoughtfulness. Owing to protracted drought the crops on this reservation, except potatoes, have nearly failed the present season, but the people are not discouraged, and will have double the area under cultivation next year.

About 20 acres of new land have been cleared, some 3,000 stumps pulled in an old clearing, several miles of fence built, the agency buildings repaired, three miles of wretched road put in good repair, 300,000 feet of lumber sawed, and much other work done which cannot be classified. About 20 acres of winter wheat have been sown. During the summer one of the Indians took a contract to furnish 100 cords of tan-bark, which he completed to the satisfaction of all concerned. This furnished employment to a number of Indians for several weeks; and as all the business was transacted by them, they were deservedly proud of their success. Most of these people are members of the Roman Catholic Church. Their pastor has been a missionary among them for many years, and has labored with the zeal for which his Church is proverbial to secure converts. He has accomplished much good.

#### RED RIVER BANDS.

A year ago these Indians were quite as discouraged and demoralized as their brothers at Red Cliff, and their reservation presented about the same appearance of neglect and decay. Much of the soil is exceedingly fertile, but most of the land once cleared had been allowed to return to its wild state; and the Indians, who had become in some degree civilized under the faithful efforts of the missionaries of the American Board, were falling back to their savage condition. The board had been obliged, by the unfriendly attitude of a Government agent, to withdraw from the field some years before, and, notwithstanding the faithful, energetic, and prayerful labors of Henry Blatchford, who still represented the board, and was also employed as teacher of the Government school, most of the little band of Christian Indians had become scattered, and the pupils of the boarding-school had returned to the wigwams. A few still held fast to their profession, however, and it is to-day the testimony of all well acquainted with these people that the best and most power-

ful influence among them is wielded by those once pupils of the missionaries, and who have treasured up the lessons there learned. This influence is so generally felt and appreciated, that the proposition to re-establish the mission and boarding-school was greeted by none more heartily than by some of the old "medicine men," who had been used as instruments to destroy the first one.

The transfer of the mission property to the Presbyterian Board took place last winter, and a contract was soon afterward made by the Department, under which the board is to re-establish the school on its former basis. Much preparatory work, in the way of repairs, raising a crop, &c., has been done the past summer. A superintendent and teachers are now on the ground, and it is hoped that the institution will be successfully inaugurated at an early day. There is no part of the work in the agency more important than this, and it deserves not only the warm sympathy and support of Christian benevolence but the hearty co-operation of generous aid from the Government.

During the year several miles of fence have been built and repaired; a new barn, 30 by 40 feet, and a large root-cellar, built; a number of houses for Indians repaired, and five new ones are being constructed.

Attention is respectfully invited to the accompanying statistics, which are more eloquent than words to show what the people have accomplished since last February. All have not done equally well. Many were incredulous, not believing that aid would be afforded to fit their ground or provide seed. Some did not get their eyes open until it was too late to plant a crop. Some are becoming convinced; others will wait till another season. There was reason for this incredulity. One man with his son had cleared forty acres of heavily timbered land, ready for the plow, but had never been able to get a team to plow it. There were many similar cases.

Many of the Indians became discouraged and abandoned the reservation, some seeking employment among the whites, and others becoming vagrants. Most of these people desire to return and make permanent homes on the reservation. This disposition should by all means be encouraged. The ideas of civilization they get in border white communities, where it is a common occurrence for unscrupulous white men who need their labor to offer a premium in whisky, are rather worse for them than none at all. There will probably be an accession of eighty to one hundred families at this reservation in the spring. They must be received and provided for. They are not only peaceful and loyal, but they beg for aid to put them on the road to civilization and Christianity. These Indians claim that there are some thousands of dollars due them under former treaties. Six years since their claim was investigated, and a report made showing that it had a just foundation. In reply to my statement of the case, I was informed by the Department that nothing remained to the credit of the Indians, the amounts having been expended for their benefit. This I cannot make the Indians understand without a statement showing in detail for what purposes the money was expended.

In July last I received information that two persons had filed pre-emption claims on certain lands included within the limits of this reservation. Further investigation showed that these lands, together with others belonging to the reservation, and amounting altogether to upward of 9,000 acres, had been certified to the State of Wisconsin as swamp-lands, and that the pre-emptions were made in accordance with the State laws. On my making a statement of the case to the Commissioner of the General Land Office, he ordered an investigation, and

promptly revoked so much of the certificate as applied to these lands, which form the most valuable portion of the reservation, producing large quantities of hay, cranberries, and wild rice.

#### LAC DE FLAMBEAU BANDS.

A portion of these bands came to receive their annuities this year. None came last year. They report a good crop of rice and fair fishing. The limited means at my disposal did not allow me to clear any land for them this year. Their reservation is remote and difficult of access, and is reported to possess little agricultural value. I sent them some agricultural implements and a quantity of field and garden seeds last spring, all of which were used to the best advantage.

#### LAC COURT D'OREILLES BANDS.

These bands are, like the last named, so remote from the agency and from any cheap means of communication, that I have been unable to do much to aid them. They are very energetic, and have done nobly for themselves, however, having raised about 2,000 bushels of potatoes this season, and built three new houses without assistance.

They are exceedingly anxious to have a school established and a missionary sent among them. They are ready and willing to adopt the habits and customs of civilization, but need help to do so. Their reservation is reported to possess little agricultural value. Two Indians of full blood, formerly connected with these bands, have purchased land, and a few days since formally withdrew from their tribal relations, and took preliminary steps toward becoming citizens of the United States.

So much of my time was occupied by the performance of my duties as a member of the special commission to investigate matters relating to issues of Chippewa scrip, that I have been unable to visit either of the reservations last named as I had intended; I shall do so at the earliest possible day.

#### SALE OF LIQUOR TO THE INDIANS.

To all appearance, the amount of liquor sold to Indians in this agency has decreased somewhat during the past year; but there is still room for vast improvement in this respect. I am sorry to say that I find in every community a strong sentiment of hostility to the Indian, because he is an Indian—as strong a caste prejudice as exists in some sections against the negro. Many people sincerely believe in the “extermination policy,” and, rightly enough, believing that alcohol is the surest exterminator, wink at the traffic. Local sentiment does not demand, hardly approves, the enforcement of the law. It is therefore exceedingly difficult and quite expensive to obtain testimony to convict offenders. After close observation, and after conference with many friends of the Indian, who, being on the ground, know and appreciate the difficulties that hinder the enforcement of the law, I venture to recommend that it be amended in two particulars. First, by giving such a construction to the law that its provisions will include all Indians and mixed-bloods who receive annuities or other benefits from the the United States, whether they reside on a reservation or not. This construction has already been given by one United States district court, but would be better if embraced in the act itself. Second, providing that whenever an offender is convicted, one-half of the fine assessed shall be given to the party

making the complaint. With such a provision, I will engage to break up the whisky traffic with Indians in this agency in six months. I should also suggest that the other half of the fine be paid into the Treasury of the United States, to be expended, under the direction of the President, for needy Indian orphans, the sums accruing from each tribe to be kept separate and expended for the benefit of the orphans of that tribe. The Indian, the Chippewa Indian, at least, has been greatly slandered by many in regard to his natural appetite for alcoholic stimulants, and by none more loudly than by the wretches who tempt him to destruction by their use. He had no natural appetite for it. Before the whites came, these northern Indians did not possess alcohol in any form, their only stimulant being tobacco. One of the first contributions made by "civilization" to the Chippewas of Lake Superior, at La Pointe, was about five generations ago, and consisted of rum. Even now, notwithstanding the hardships and exposures of an irregular, roaming life, in the midst of the strongest temptations, many of these Indians cannot be induced to drink intoxicating liquors; and I know several instances where the habit has been voluntarily abandoned by them after years of indulgence.

#### PAY OF EMPLOYÉS.

It is exceedingly difficult, at present prices of labor, to secure competent and trustworthy employés, farmers, blacksmiths, and teachers at the salaries paid. I have, indeed, found it impossible to find fit men for all the positions I desire to fill, and have, therefore, been obliged to labor at a disadvantage. If the compensation of the classes named were increased one-third, it would be possible to get employés of character, who would do something toward carrying out the wise and just policy of the Government.

#### EDUCATION.

A majority of the parents earnestly desire the education of their children in letters. At the outset the teachers find their pupils totally destitute of home education, and meet the great difficulty of enforcing discipline where it has never been exacted. Parents as well as children often rebel at this. This difficulty once surmounted, the pupil is eager and learns readily. Then follows the discouraging sequel, irregularity of attendance. Two months at school, perhaps, and then parents and children emigrate to the sugar-camp or rice-field, or to a distant fishing-ground, where as much more time is spent, the child, in the meanwhile, forgetting amid his savage surroundings as readily as he acquired. This difficulty is perhaps the greatest, because for some years to come the families will continue to make these periodical journeys. In sugar-making and rice-gathering, a large share of the work is done by women and children. It is only in exceptional instances that parents can be induced to separate from their children, or children to leave their parents for even a short distance and limited time. The boarding-school will provide for these exceptions, and should be of high enough grade to train pupils for teachers.

If the above difficulties, which are not imaginary but thoroughly practical, can be overcome, the problem of the civilization and christianization of these people is virtually solved.

If the children leave the teacher, he should follow. It may be that he will reap an even richer harvest in the camp than in the school-room, for he will certainly, if he bear himself aright, gain the perfect confidence of both parents and children. To do this he must be devoted to

his work and well qualified. He must be a missionary as well as a teacher. This is not a visionary plan; it is practical. If such teachers can be found—and I believe they can—they should be engaged for this work. The present system (or want of system) of Indian education, so far as my observation extends, is generally exceedingly wasteful and inefficient. Fixed schools for a roaming people will not do. The ark must accompany the wanderers. All these Indians are children, and their education must be very primary and eclectic. The simplest lessons in physical and domestic economy are quite as important to them now as those in the spelling-book; the plainest principles of morality and Christianity as easily taught and as readily accepted as the rudiments of the English language. They want all these lessons together. Then we may feel sure of a hopeful result. Their industry and their desire to become civilized they have already demonstrated. No people ever responded more readily to efforts in their behalf than the Chippewas of Lake Superior to the wise Christian policy of the Government.

Very respectfully, your obedient servant,

S. N. CLARK,  
*United States Indian Agent.*

Colonel H. R. CLUM,  
*Acting Commissioner of Indian Affairs.*

No. 112.—Statistics of education, &amp;c., 1871.

*a Report of 1869.*

c No report: estimated population.

Estimated population: no returns for 1871.

<sup>a</sup> No report; estimated population.  
<sup>b</sup> Estimated population, as reported for 1871.  
<sup>c</sup> Owing to the threatened raid by the citizens of Grant County in August, 1871, most of these Indians had fled to the mountains, and have not all returned yet. The

Owing to the uncertainty as to the census of the citizens of Orange County, the population is estimated.  
 of Sixteen schools to be established September 1st; fifteen male teachers. The number of scholars cannot be known until the schools are established and organized. It is not possible to ascertain the wealth of these Indians. The schools are not under the charge of any religious denomination, except Latin; this is under the care of the Roman Catholic teacher. Rev. Padre Brnn.  
 Expect to commence school in October.

**Expect to commence school in October.**

**9 Expect to commence school in October.**

<sup>a</sup> No report; report of 1870.

<sup>c</sup> The Indian schools are improving and doing a good work. There are seven local superintendents over the schools of this agency, appointed by the State superintendent, and all report to me that there has been regular improvement in all the schools in attendance, &c. A teachers' institute, for the training and instruction of teachers, was held on the Cattaraugus reservation in September and well attended; thirty-five teachers being present, and much interest manifested. It was the first ever held on any reservation. Six of the male teachers and three of female are Indians. The State of New York supports all the schools of these several reservations, except two, which are supported by religious denominations. The Indian teachers are on a par with the white.

<sup>b</sup> No report; report of 1869.

<sup>a</sup> The Saint Regis Indians are mostly Roman Catholics and attend church in Canada. One Indian missionary under the care of the Methodists is on the reservation.

<sup>b</sup> Educational fund exhausted and school closed last June.

<sup>c</sup> This school closed in May last.

<sup>d</sup> This school is closed.

<sup>e</sup> Not treaty Indians.

<sup>f</sup> Schools discontinued April 1, 1871. Since then the Presbyterian Board of Missions has had charge and a considerable sum has been expended by the board to re-establish the boarding-school.

1. Rev. I. Ross Ramsey.

*a* Could not learn the proportion of the sexes. *b* No data to estimate proportion of sexes. Schools to be increased 60.  
*c* About 1,500 in other States. *d* Three of these schools are devoted to the education of freedmen. *e* Estimated population.  
*f* The Presbyterian Board of Foreign Missions contributed about \$3,600 towards the erection of mission building and education of Seminole children, and \$16,000 to the support of a missionary.

No. 119.—Statistical return of farming, &amp;c., 1871.

<sup>a</sup> 10,000 feet of lumber used; balance on hand. <sup>b</sup> Buckskin robes sold by these Indians to the amount of \$2,700. <sup>c</sup> No statistical report. <sup>d</sup> 6,509 bushels buckwheat raised, valued at \$5,905. More fruit is raised on the Tuscarora reservation than on any of the others. It is supposed 4,500 bushels of choice apples are raised on this reservation, and about 600 bushels of peaches, pears, grapes, &c. Much greater attention is given to the raising of fruit, on all the reservations, than formerly; also the raising of stock since fairs have been established. The receipts of the Cattaraugus fair were \$2,000, mostly paid to exhibitors as premiums. <sup>e</sup> These Indians subsist mostly by fishing and trapping. <sup>f</sup> 287 bushels of beans, valued at \$570; 120 bushels of buckwheat, \$60. <sup>g</sup> Indians doing well. <sup>h</sup> Timbering operations have interfered with agricultural pursuits, to their injury. <sup>i</sup> No returns. <sup>j</sup> 100 bushels beans; value, \$210.

No. 119.—Statistical return of farming, &amp;c., 1871—Continued.

OFFICE INDIAN AFFAIRS, October 25, 1871.

No. 121.

DEPARTMENT OF THE INTERIOR,  
*Office of Indian Affairs, November 1, 1871.*

SIR: I have the honor to submit the following report of the business connected with the Indian trust-funds, since November 1, 1870, accompanied by classified exhibits of the entire fund now held in trust by the Department.

## PURCHASE OF STOCKS.

All investments for the benefit of the Indians since the last annual report have been made in United States 5 per cent. bonds, "funded loan of 1881." Bonds to the amount of \$288,500 have been purchased at a cost, exclusive of incidental expenses, of \$326,175 02. The loan in which these investments were made, the rate of premium, commission, &c., the amount purchased for each tribe, the sources from which the funds were derived or drawn for investment, the date of purchase, and the time interest commenced to accrue on the same to the fund, are fully shown by the following schedules of purchase, Nos. 1, 2, and 3.

*Schedule No. 1, showing the description, amount, cost, and date of purchase.*

| Kind of bonds purchased.              | Date of purchase. | Am't purchased. | Per cent. | Rate of purchase. | Cost of bonds, including commission. | Commission. |

| Total amount of bonds sold and redeemed.....   | \$150,449 57 |
| Less discount and tax.....                     | 79 32        |
| Total proceeds of bonds sold and redeemed..... | 150,370 25   |

The sale of the bonds belonging to the Pottawatomie education and mill funds (shown in the statement of sale of bonds) was to enable the President to pay to the Pottawatomie Indians who had elected to become citizens in accordance with the provisions of the third article of the treaty of November 15, 1861, as modified by the treaty of March 29, 1866, their proportion of the bonds held in trust for them.

It will also be seen by referring to the foregoing statement of "sale and redemption of bonds" that the United States bonds loan of 1867, amounting to \$3,200, were a portion of the funds held in trust for the Cherokee national fund." The funds arising from the sale of these bonds were expended in payment of the indebtedness of the Cherokee Indians, represented by Cherokee national warrants, an account of which is stated in connection with the sale of "Cherokee neutral lands," (see Trust Land report for the present year.)

On the 12th of June, 1871, the Hon. Secretary of the Interior called the attention of the Indian Office to the provisions of the treaty concluded February 23, 1867, with the Kaskaskia, Peoria, Wea, and Piankeshaw Indians, and directed that bonds to the amount of \$44,700 be taken from the amount held in trust for them, and be set apart as a school fund for said Indians, with interest to accrue thereon to said fund, from January 1, 1871. In accordance with these instructions the necessary transfers have been made upon the trust-fund books."

The following statement will exhibit their present school fund :

*Statement of transfer of bonds.*

| Fund or tribe.                                            | Description of the bonds transferred. | Amount of principal. |
|-----------------------------------------------------------|---------------------------------------|----------------------|
| Kaskaskias, Weas, Peorias, and Piankeshaw school fund.... | Florida 7 per cent. bonds....         | \$20,700 00          |
|                                                           | Kansas 7 per cent. bonds....          | 24,000 00            |
|                                                           | Total .....                           | 44,700 00            |

*Recapitulation of statements effecting aggregate of bonds held in trust, &c.*

|                                                                                           |                      |
|-------------------------------------------------------------------------------------------|----------------------|

| Total funds held in trust November 1, 1871.....                                           | <u>4,749,616 82½</u> |

INTEREST APPROPRIATED BY CONGRESS ON NON-PAYING STOCKS AND REIMBURSABLE.

These appropriations are annually made in order to relieve the Department from any embarrassment on account of interest falling due to various Indian tribes on bonds of certain States, the greater portion of which suspended payment at the commencement of the rebellion.

*Statement of appropriations made by Congress for the year ending June 30, 1871, on non-paying stocks held by the Secretary of the Interior for various Indian tribes.*

| Deduct amount refunded to the United States.                                                        |              |              |              |              |              |              | 37,755 00    |
| Total carried to the credit of "trust fund interest" due various Indian tribes.                     |              |              |              |              |              |              | \$8,020 35   |

The report of the Commissioner of Indian Affairs for the year 1869, page 484, exhibits an account of a transfer from the "trust fund books on the 13th of May, 1869, of certain bonds from the Delawares to the different Cherokee funds in accordance with a contract or agreement

made between said Indians, April 8, 1867. As a portion of the stocks transferred were non-paying State bonds, the interest upon which had been appropriated by Congress for the fiscal years ending July 1, 1869, and July 1, 1870, the interest appropriated for that period was brought upon the appropriation books, under the head of "Trust-fund interest due the Delaware General Fund."

In order to carry the amounts so appropriated to the proper funds, there was drawn from the head of appropriation "Trust-fund interest due Delaware General Fund," and paid to the Cherokees, \$1,920, being twelve months' interest appropriated on the following State stocks transferred to them by the Delawares:

|                                                                                                              |                 |
|--------------------------------------------------------------------------------------------------------------|-----------------|
| Twelve months' interest from July 1, 1869, to July 1, 1870, appropriated on \$6,000 Florida 7's.....         | \$420 00        |
| Twelve months' interest from July 1, 1869, to July 1, 1870, appropriated on \$4,000 Louisiana 6's .....      | 240 00          |
| Twelve months' interest from July 1, 1869, to July 1, 1870, appropriated on \$21,000 North Carolina 6's..... | 1,260 00        |
| <b>Total .....</b>                                                                                           | <b>1,920 00</b> |

The above transfer of stocks having occurred some time subsequent to the date of contract, it became necessary to establish the date from which interest should accrue to the Cherokees.

The United States bonds (issued to the Union Pacific Railway Company) were transferred at 106 $\frac{3}{4}$  with accrued interest, being market rates on the day of transfer, as above stated.

As it is understood that the question as to the accrued interest on the State stocks which were transferred at par will be decided by giving the Cherokees the interest on the same from the date of transfer, the following schedule will indicate the period and amount of interest originally carried to the credit of the Delawares, which belongs to the Cherokees, and as the last half of the present fiscal year will commence on the 1st proximo it is desirable that the necessary steps should be taken by the Department to make the transfer on that date.

In this connection, I desire also to call your attention to the provisions of an act of Congress, (so far as it relates to the Delawares,) approved July 15, 1870, (vol. 16, p. 343,) making an appropriation of

\$22,714 25 to enable the Secretary of the Interior to carry into effect the provisions of the ninth article of the treaty of July 4, 1866, (vol. 14, p. 796,) by a division of money and stocks held by the United States in trust for the Delawares, between a portion of said Indians who elected to become citizens, and the residue of said nation, "of which \$8,930 69 shall be deducted from the money credits of said nation, and \$13,777 56 to be taken equitably from their several kinds of stocks, shall be transferred to the Secretary of the Treasury, and become the property of the United States."

The sum of \$22,714 25, being the amount appropriated as above stated, was remitted to Superintendent Hoag, on the 15th of last August, to be paid to the Delawares who had elected to become citizens. The sum of \$13,777 56 should, therefore, be taken equitably from the stocks held in trust for the Delawares and transmitted to the Treasury Department.

In preparing the trust-fund reports for the present year, it has been the aim to obviate some of the difficulties which have heretofore been encountered in settling the questions arising in reference to appropriations and reimbursements for interest on non-paying stocks. The collections which the Department has been enabled to make from time to time have frequently been only for fractional portions of a year, rendering it impracticable to arrive at any correct basis upon which to make estimates of the amount necessary to be appropriated by Congress to cover the deficiencies that might arise during any fiscal year from non-payment of interest by the States indebted.

Collections have frequently been made for portions of the same period for which appropriations were made, and in order to cancel a portion of the amount for which these States were in default, the Secretary of the Treasury has, in some instances, been requested to retain from said States a certain amount of their proportion of the proceeds of the sale of public lands, and in other instances a part of amounts found due said States on the adjustment of their war claims against the Government.

The frequent changes in the character of the securities held in trust, the purchase, exchange, sale or equitable distribution of the funds or the proceeds thereof to individual members of certain tribes, in accordance with certain treaties or acts of Congress, the appropriations made by Congress, and the collections of interest, have added to the complication of these accounts until it has become a matter of absolute necessity, in order to prevent unnecessary delay in the transaction of this branch of the business, that a careful and thorough re-examination should be made of all the trust-fund accounts since 1861.

A portion of this labor has been accomplished with the assistance of three efficient accountants, whose familiarity with said accounts best qualified them for that purpose. Statements A, B, C, D, E, and F herewith exhibit the result of the work.

Statements E and F show the amount of interest on non-paying State stocks, (except those held in trust for the benefit of the Chickasaw national fund,) appropriated by Congress since 1861, brought on the books of the Indian Office by appropriation warrants, together with the amount of interest collected on the same, how applied, the amount due from the States, and the disposition made or to be made thereof.

From these statements it appears that there was appropriated and brought on the books of this office for interest on the stocks named, and for the time stated, \$966,948 70; that there was collected for the periods stated, \$324,016 07, of which \$240,417 20 was covered into the Treasury to reimburse the Government for appropriations made, and \$83,598 87 was covered into the Treasury and carried to the credit of the tribes.

There is due from the States \$650,658, of which \$5,070 should be carried to the credit of the tribes, and \$643,588 should be reimbursed to the Government.

There is also due from the tribes to the Government \$23,371, being interest collected for periods for which appropriations had heretofore been made and carried to the credit of the tribes.

Very respectfully, your obedient servant,

LONSVILLE TWITCHELL,

*Trust Fund Clerk, Indian Office.*

HON. H. R. CLUM,

*Acting Commissioner of Indian Affairs.*

No. 121 a.

INDIAN TRUST FUND.

**TABULAR STATEMENT A.**—*List of names of Indian tribes for whom stock is held in trust by the Secretary of the Interior, showing the amount standing to the credit of each tribe, the annual interest, the date of the treaty or law under which the investment was made, and the amount of abstracted bonds for which Congress has made no appropriation, and the annual interest on the same.*

| Tribe.                                                      | Treaty or act. | Statutes at Large. |       | Amount of stock.    | Annual interest.  | Amount of abstracted bonds. | Interest on abstracted bonds. |

## No. 122.

### DEPARTMENT OF THE INTERIOR,

*Office Indian Affairs, November 1, 1871.*

SIR: I have the honor to invite your attention to the following statement of financial transactions in relation to the sales of Indian lands which have occurred during the year ending October 31, 1871, and to such other transactions, occurring prior thereto, as have reference to the accounts of sales during that period.

The sales referred to show the receipts arising from the sale of Indian trust lands; amounts received as deferred payments, or interest thereon, as provided by contract or treaty stipulations, and also amounts reported by the General Land-Office, as received for Indian lands sold under the direction of that office.

### CHEROKEE NEUTRAL LANDS.

That portion of these lands which the appraising commissioners reported as unoccupied land, and which was sold to James F. Joy at \$1 per acre, (the avails of which, including interest on deferred payments, amount to \$686,520 95,) was paid for in full prior to November 1, 1870, as will be seen by reference to Indian Office report of that date.

The corrected plats of the General Land-Office give the area and valuation of the Cherokee neutral land occupied by pre-emption and improvement claimants, as shown by the following account of sales:

*Treaty.*—Sold in accordance with the seventeenth article of the treaty of July 19, 1866, (14 United States Statutes at Large, page 799.)

*Mode of sale.*—By approval of settlers' claims at an appraised valuation; forfeited claims sold upon sealed proposals invited by advertisement.

Total area offered for sale..... 154,395.12 acres.  
Appraised valuation..... \$296,887 01½

*Period during which payments were made.*

| From—                                                | To—                    | Area.        | Appraised valuation. |
|------------------------------------------------------|------------------------|--------------|----------------------|
| November 1, 1868 .....                               | November 1, 1869 ..... | 81, 442. 90  | \$156, 097 00½       |
| November 1, 1869 .....                               | November 1, 1870 ..... | 68, 201. 78  | 130, 851 19½         |
| November 1, 1870 .....                               | May 1, 1871 .....      | 1, 519. 23   | 2, 858 67            |
| Number of acres sold at an appraised valuation ..... |                        | 151, 163. 91 |                      |
| Amount of avails at appraised valuation .....        |                        |              | 289, 806 87          |
| Balance of land .....                                |                        | 3, 231. 21   |                      |
| Appraised valuation .....                            |                        |              | 7, 080 14            |

The balance of the land, (3,231.21 acres,) having an appraised valuation of \$7,080 14, was advertised for sale by late Commissioner Parker, on the 13th of June, 1871, and sealed bids for the same opened on the 11th of August following. All of the lands advertised were awarded to the highest bidders, the avails of which, amounting to \$8,966 63, have been received through this office and deposited in the Treasury of the United States, to be carried to the proper head of appropriation.

| Total amount of principal and interest under original contract at date of termination, would be .....                                  |                         |     | 442,234 29  |

The above statement of sales of Pottawatomie lands will be somewhat modified on final settlement with said company. In compliance with their request, the Department issued about 2,500 certificates of purchase by subdivisions, and it was subsequently found that a few certificates were issued for tracts that had been allotted and patented to members of the tribe, in accordance with the provisions and reservations of the treaty. A proposition has been made on the part of the honorable Secretary of the Interior to issue new certificates of purchase to said company for 707.06 acres of unallotted land in lieu of 956.82 acres inadvertently certified to the company. This proposition has already been carried out in part, and when completed will diminish the amount of land for which the company will be held to pay under their contract by 249.76 acres, and also the amount of principal sum to be realized from such sale to \$339,930 53.

## DISPOSITION OF FUNDS.

The amount received on the above account as the accrued interest from the date of the contract to September 3, 1870, (\$40,821 64,) has

been covered into the United States Treasury under the head of appropriation "Trust-fund interest due Pottawatomie general fund."

The interest for the year ending September 3, 1871, has been covered into the Treasury under the head of "Fulfilling treaty with Pottawatomies—proceeds of land."

Fifteen hundred and eighteen of the Pottawatomies who became citizens have received \$28,425 33, their *pro-rata* share of the amount covered into the Treasury, under the first appropriation above named, leaving a balance under that head of \$12,396 31.

Should such of the Pottawatomies who are entitled remove upon the reservation selected for them, upon the land recently occupied by the Seminoles, it will be seen by the second article of said treaty that so much of the interest arising upon the deferred payments above referred to as may be necessary should be retained and credited to said tribe on account of funds advanced by the Government, provided the United States shall have advanced said money for the purchase of a new reservation as therein proposed.

OSAGE INDIAN LANDS.

DISPOSITION OF FUNDS.

The treaty provides that, after reimbursing the United States for the cost of survey and sale, and for the \$300,000 placed to the credit of said Indians, the balance shall be placed in the Treasury of the United States to the credit of the civilization fund, to be used under the direction of the Secretary of the Interior for the education and civilization of Indian tribes residing within the limits of the United States.

OSAGE INDIAN TRUST LANDS.

*Treaty and act.*—Sold in accordance with the second article of the treaty of September 29, 1865, (14 Statutes at Large, page 688;) and section twelve of an act of Congress approved July 15, 1879, (16 Statutes at Large, page 362.)

| Total number of acres sold by the General Land Office under the second article of said treaty..... |                       | 646,982.79               |                    |                  |
| Total avails of the same, as reported by that office.....                                          |                       |                          |                    | 808,729 10       |

## DISPOSITION OF FUNDS.

By the provisions of the second article of the treaty, the proceeds of the sales, as they accrue, after deducting all expenses incident to the proper execution of the trust, are to be deposited in the Treasury of the United States to the credit of said tribe, and the interest thereon, at the rate of 5 per cent. per annum, is to be expended for their benefit as indicated; provided that 25 per cent. of the net proceeds, until the same amounts to \$80,000, shall be placed to their credit as a school fund. Section 12 of the act of Congress approved July 15, 1870, provides for the sale of their diminished reserve, and that the Secretary of the Interior shall keep an accurate account of the proceeds of sales of their trust lands, and that after such deductions on account of surveys and sales, as provided by said act and treaty, interest shall be paid to said Indians at the rate of 5 per cent. per annum on the aggregate amount realized on account of such sales prior to November 1 of each year.

All of the avails of the above sales, as reported by the General Land Office, have not yet been brought upon the books of the Indian Office.

The amount brought on the appropriation books of this office, under the head of "Fulfilling treaty with Osages—proceeds of trust lands," is \$348,701 05.

From this sum there have been drawn the following amounts for payment of expenses of surveys, &c.:

|                     |              |
|---------------------|--------------|
| March 14, 1870..... | \$12, 953 67 |
| April 15, 1870..... | 3, 600 49    |

---

---

16, 563 16

|                                                                            |               |
|----------------------------------------------------------------------------|---------------|
| Balance remaining at this date under the above head of appropriation ..... | \$332, 137 89 |
|----------------------------------------------------------------------------|---------------|

---

---

As the amount received on the above account during the past year is apparently so much in excess of all deductions, appropriations, and refundments, provided by treaty or act, I would respectfully suggest that the necessary steps be taken to ascertain from the General Land Office a statement of all expenses arising from said sales prior to November 1 of each year, to enable the honorable Secretary of the Interior to determine the amounts upon which 5 per cent. interest shall accrue to said Indians.

## WINNEBAGO TRUST LANDS.

A complete statement of the Winnebago trust-land account was prepared and published with the report of the Commissioner of Indian Affairs for the year 1869, page 506. The number of acres remaining unsold at that date was 4,146.43, and certificates of indebtedness outstanding amounting to \$1,884 50.

The annual report for 1870 exhibits no change in this account; nor have any sales of said lands since occurred, and the same amount of certificates of indebtedness remains outstanding.

*Winnebago reservation in Minnesota.*

*Treaty or act.*—Sold in accordance with an act of Congress approved February 21, 1863, (12 United States Statutes at Large, page 658.)

*Mode of sale.*—Sections two and three of said act provide for the sale, under the direction of the General Land Office, of the lands allotted to the Indians as provided by the treaty of April 15, 1859, (United States Statutes at Large, vol. 12, p. 1101.)

*Periods during which sales have occurred as reported by the General Land Office.*

## DISPOSITION OF FUNDS.

The treaty provides that the interest on the deferred payments, and the interest due on the purchase-money after it is paid to the United States, shall be held in trust, and paid to said Indians on the 1st day of April of each and every year; and in ten years from the ratification of the treaty there shall be paid by the United States to said tribe of Indians \$10,000 each and every year thereafter until all is paid.

The fifth article of the treaty also provides that the said railroad company shall pay the whole amount of the purchase-money for said lands to the Secretary of the Interior, in trust for said Indians.

|                                                                                                                                                                                                                      |                   |

The certificate for \$12,935 65 received from Superintendent Hoag has been deposited in the Treasury to enable that Department to carry the amount represented by the same to the head of appropriation, "Fulfilling treaty with Chippewa and Christian Indians; proceeds of land."

The third article of the treaty provides that, after deducting the expenses incident to the negotiation of said treaty, the survey and assignment of the lands, and all other necessary expenses, (which would embrace the expense of advertising and conducting the sale of the lands as indicated by the second article of said treaty,) the balance of said funds shall be invested in safe and profitable stocks, for the benefit of said Indians.

The balance of the land remaining unsold November 1, 1870, (6,360.24 acres,) was advertised for sale, by direction of the honorable Secretary of the Interior, on the 26th of July, 1871, and bids for the same were opened on the 2d of October last.

Awards were made to the highest bidders for all the land advertised, and approved by the Secretary, on the 14th of the same month.

Parties purchasing have been allowed forty days in which to complete their payments, which time has not expired at the date of this report.

## DISPOSITION OF FUNDS.

The second article of the treaty provides that "the proceeds of the sales, after deducting therefrom the expenses of surveying the lands, and all other expenses incident to the negotiation of these articles of convention, and the proper execution thereof, the balance shall be applied as follows, viz: one-half shall be held in trust by the United States for the benefit of the Sacs and Foxes of the Missouri, and interest thereon, at the rate of five per centum per annum, shall be paid annually, with the other funds to be paid said tribe, in the same manner as stipulated in the treaty of May 18, 1854."

The third article provides that "the United States shall hold in trust, for the use and benefit of the Iowas, the one-half of the net proceeds of the sales of the lands described in the second article of this agreement, and interest thereon, at the rate of five per centum per annum, shall be paid to the Iowa tribe in the same manner as their annuities are paid under the treaty of May 17, 1854."

## SACS AND FOXES OF THE MISSISSIPPI.

In accordance with the third article of the treaty ratified July 25, 1868, (15 United States Statutes at Large, page 495,) Congress, by an act approved April 10, 1869, made an appropriation to pay said Indians, parties to said treaty, for all the balance of land which had been held in trust for their benefit, excepting such tracts as had been set apart

for individuals. This act virtually closed their trust-land account, with the exception of the redemption of their outstanding certificates of indebtedness issued under authority of previous treaties. Provision was, however, made for the payment of these certificates from the proceeds of the land ceded to the United States by said treaty.

The act of April 10, 1869, appropriated the sum of \$147,393 32 in payment for said lands; of which amount there was placed in the agency branch of the United States Treasury, for the redemption of certificates of indebtedness, the sum of \$40,000.

## DISPOSITION OF FUNDS.

|                                                                                                                                                               |             |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| Amount disbursed in the redemption of Kansas Indian certificates of indebtedness and interest thereon.....                                                    | \$53,813 88 |
| Amount covered into the Treasury under head of "Fulfilling treaty with Kansas Indians; proceeds of land," and since disbursed in payment for advertising..... | 10 35       |
| Total.....                                                                                                                                                    | 53,824 23   |

On the 4th of July, 1869, a contract was made and concluded between R. S. Stevens, representing the Union Pacific Railroad Company, southern branch, now the Missouri, Kansas and Texas Railway, and Enoch Hoag, superintendent of Indian affairs, on the part of the United States, by the terms of which the said railroad company agreed to pay to said Superintendent Hoag, for about 240 acres of the Kansas reserve, the sum of \$10 per acre, being for right of way," and three forty-acre lots for depot purposes; it was also agreed that the company should have the right to cut timber for ties from said reserve for one year, paying therefor twenty cents for each tie cut; and for all timber taken and sawed, \$6 per thousand feet.

There has been received on account of the above agreement, and covered into the Treasury under the head of "Fulfilling treaty with Kansas Indians; proceeds of land," the sum of \$14,000, which amount has been remitted to the superintendent for the benefit of said Indians.

There have been no Kansas Indian certificates of indebtedness redeemed since the date of the last annual report. The amount of the same outstanding will exceed \$100,000, exclusive of interest.

The balance of the Kansas Indian trust lands, amounting to 137,658.13 acres, also all that portion of their diminished reserve lying outside of the exterior boundary line of the lands assigned in severalty to members of the tribe under the provisions of the treaty was advertised for sale by the direction of the honorable Secretary of the Interior May 18, 1871, the right being expressly reserved on the part of the Department to reject any or all bids for said lands. A large number of bids were received at this office, accompanied by 10 per cent. deposits on account of the same, amounting in the aggregate to over \$100,000. One of these bids was for the whole amount of land offered for sale, and by full payment would aggregate \$449,532 30, but was qualified by the condition that the whole of said lands should be awarded in accordance with the terms of said bid. The aggregate amount of all other bids was \$274,665 28. These did not cover all of the tracts offered for sale, and it was supposed that the remaining tracts were worth much less per acre than those bid for. After having submitted to the Attorney General the question whether the bid for the entire tract could be considered under the provisions of said treaty, and the same having been decided in the negative, all the bids received were rejected by the honorable Secretary of the Interior, and all persons interested have been notified, and the amounts deposited by them respectively as ten per cent. on their bids have been returned.

Before closing this report I desire to state that, while reviewing the different Indian land accounts for the past year, it has been the object to make as complete and full report as practicable, and in cases where such accounts have recently been closed, to state in detail, not only the avails of such sales as have occurred, but also the disposition or disbursement of the proceeds thereof and the authority therefor; and when published in connection with your annual report, it is believed that the information which will thus be furnished will save much correspondence hereafter on the subject.

The report on trust-funds will exhibit the investments made during the past year from the "proceeds of lands."

Very respectfully, your obedient servant,

LONSVILLE TWITCHELL,

*Trust-Fund Clerk, Indian Office.*

Hon. H. R. CLUM,

*Acting Commissioner of Indian Affairs.*

No. 123.—Schedule showing the names of Indian reservations in the United States, tribes occupying the same, area in acres and square miles of each reservation, population of each tribe, and reference to treaty, law, or other authority by which reservations were established.

## No. 124.

CHIPPEWA AGENCY, MINNESOTA,  
October 20, 1871.

SIR: The board of visitors to the Red Lake and Pembina Indians beg leave to submit the following report:

Pursuant to your letter of instructions, we have attended the annuity payments of money, goods, and provisions to the Red Lake and Pembina Indians, and believe that these payments have been made in strict accordance with the terms of the treaty, and in a manner satisfactory to the Indians, with a single exception. The calico provided, although ample in quantity, was not satisfactory in quality. If the purchasers will, in future, add one-half per cent. per yard to the price paid for calico, and will thus supply a smaller quantity of a superior quality of goods, having marked colors, they will meet the expressed wish of the Indians.

We have also, in the performance of our trust, inspected the fields of the Indians, noted the improvements made, and have inquired as to the moral deportment and qualifications of persons residing upon the reservations under authority of law.

Permit us to call your attention to the Red Lake reservation. With the permanent employés of Government on this reservation we take pleasure in expressing our satisfaction. We have every reason for believing them to be faithful and efficient persons, who are laboring heartily to promote the interests of the Indians. We ought, however, to add that, at the salaries now paid, great difficulty is experienced in securing desirable persons to fill positions here. Only persons who regard the work at this distant station as pre-eminently a missionary work, and are willing to serve the Government and labor for the Indian at a great personal sacrifice, can be prevailed upon to engage in it.

During the past year the following improvements have been erected in a neat and workmanlike manner at the agency, viz: a warehouse, the upper part of which has been finished for a school room; a blacksmith-shop; house, and carpenter's house. The saw and grist mill has also been placed in thorough repair, and is now capable of turning out 5,000 feet of lumber, and of grinding 100 bushels of corn per day.

The condition of the Red Lake Indians is, in general, very encouraging. In force of character and in purity of life they are superior to other bands visited by the board. They manifest in an unusual degree a disposition to till the soil and to establish themselves in permanent homes. A large portion of their reservation is unfit for agricultural purposes in consequence of the poverty of the soil. A narrow belt surrounding the lake is, on the contrary, very fertile. Much of this fertile belt is heavily timbered; a portion of it was cleared and cultivated by missionaries years ago. Since the abandonment of the mission, the Indians have enlarged this clearing somewhat, and have cultivated it themselves. During the past season they have raised more corn than they will need for their own consumption. Were all of this belt made available for agricultural purposes, nearly all of the Red Lake Indians would find good farms and permanent homes upon it. In addition to the cultivation of the soil, these Indians have built for themselves, during the past season, forty substantial log-houses. This work has been done at great disadvantage, in consequence of the scarcity of carpenter's tools. Nearly half of these Indians are now out of the wigwam; there are but few, however, who have as yet assumed the civilized dress. Their attitude toward the Government is eminently friendly. The chiefs

in council expressed to the board of visitors their satisfaction with the present policy of the Government, their hope that it may not be changed, and their desire that the present agent may be continued in office. They further expressed the wish that a supply of agricultural implements and carpenters' tools might be provided them, and that a school might be sustained among them. Regarding it of the utmost importance that every desire and effort toward self-support and civilization, on the part of this people, should receive the encouragement of Government, the board of visitors recommend that an appropriation be made for the clearing of lands, for the purchase of agricultural and mechanical implements, and for the support of a school at the agency of the reservation. In journeying over the reservation, our attention has been repeatedly called to the fact that a large amount of valuable pine timber is being destroyed every year by the fires. Much of the timber stands upon lands unfit for agricultural purposes, and yet accessible by the streams of the country. We desire, therefore, to suggest the query, whether it would not be well for the Government, acting with the consent of the Indians, to authorize the sale of this timber, under proper restrictions, and to appropriate the avails to agricultural and educational purposes upon the reservation, subject to the general direction of the Secretary of the Interior. The board would further recommend the early location, by actual survey, of at least that portion of the boundary-line of the Red Lake reservation which lies between the mouth of Thieving River and Turtle Lake. We offer this recommendation because we are credibly informed that parties are now engaged in cutting timber very near if not actually within the southwestern limits of the reservation. As the boundary-line of the reservation has never been located by actual survey, it is at present impossible to prove a case of actual trespass, and to recover damages therefor. The presence of the Northern Pacific Railroad will soon render other changes in this field highly important. The most important immediate change needed is the opening of a road from Red Lake to White Earth. At present, all communication with Red Lake must be made by the way of Leach Lake, and over roads which are ordinarily almost impassable; transportation of supplies is made only at great expense to the Government. A road to White Earth will save about sixty miles of wagon transportation. A large portion of it will lie over a rolling prairie, and along the old Pembina trail. The cost of construction will therefore be moderate. We recommend that the agent be instructed to make an estimate of the expense of building the proposed road, and that an appropriation be secured for its construction.

The condition of the Pembina Indians, we regret to report, is deplorable, and almost hopeless. They are extremely poor, and, owing to the scarcity of game, their means of subsistence are scanty and precarious. Although by the joint treaty with the Red Lake Indians they have a claim upon the Red Lake reservation, the feeling which exists between the two tribes is such that they can gain no advantage from it; they cling with tenacity also to their old homes. The Turtle Mountains of Dakota have long been their hunting-grounds, and have never been ceded to the United States. They regard these mountains, therefore, as their own, and express a strong desire to have a reservation definitely located for them in that region, before white settlers shall further encroach upon them. While the board of visitors recognize the justice of their request, we do not feel that their interests will be permanently secured if it is granted. Such a settlement will remove them still further beyond the reach and influence of the agent; it will deprive them of even the pos-

sibility of schools, and of encouragement in agricultural pursuits, and will doom them and their children to continued barbarism. If any satisfactory arrangement could be made which would result in their removal to the White Earth reservation, their real interests would be greatly enhanced. Next to the want of a reservation, the relations of the Pembinas with the half-breeds render their condition deplorable. A multitude of half-breeds, having no claim whatever to Government annuities, residents many of them of Manitoba, in past years have been enrolled by the chiefs in their bands, and recognized by the Indians as members of their families; in consequence, the Indians have been robbed yearly of their dues. At the present payment the agent succeeded in reducing the roll, by excluding half-breeds unlawfully enrolled, from 982 of the previous year to 547; many half-breeds succeeded nevertheless in getting annuities to which they have no claim. That the agent may be relieved of embarrassment in his personal dealings with the Indians in this matter, the board of visitors recommend that an order be issued, prohibiting in future the payment to Pembina half-breeds who have no treaty claims thereto. A further source of corruption and degradation to these and other Indians as well, is the intoxicating liquors which, notwithstanding the stringent prohibitions of Government, are furnished at extortionate prices by frontiersmen and traders. We take satisfaction in reporting that Captain Wheaton, United States Army, commandant of post at Pembina, in accordance with article 7 of the treaty, destroyed about 100 gallons of whisky, belonging to traders, on the morning after the payments were made. In the absence of military authority upon the reservation, great difficulty is found in securing evidence sufficient to procure conviction for the sale of liquors to Indians under the present law. We would therefore recommend that the law be changed so that one-half of the fine for the sale of liquor to Indians shall go to the informer.

One further recommendation of a general nature your board of visitors desire to make, and we regard it of especial importance. We recommend that, by purchasing land from the Mississippi Indians, the Government provide for the settlement upon the White Earth reservation of all Indians of other bands who may be willing to remove thither. We are moved to make this recommendation by the evident importance of concentrating, so far and as rapidly as possible, all the Chippewas of Minnesota upon a single reserve, because of the size of the White Earth reservation, it being amply sufficient to furnish farms for all who can be persuaded to locate upon them—its unequalled fertility, its favorable location and facilities for communication, and its educational advantages, and the fact that it is to be in future the residence of the Government agent.

In conclusion, the board of visitors desire to express their satisfaction with the present policy of the Government toward the Indians, and their earnest wish to have it unchanged until its results shall become fully apparent to the world. And we desire further to congratulate the Government in securing the services of the present agent, E. P. Smith, esq., a man eminently fitted in character, education, previous experience, and personal sympathy, both with the Indians and with the policy of the Government toward them, for the post assigned him.

Respectfully submitted.

HENRY M. TENNEY.  
A. J. PIKE.  
EDWARD F. WILLIAMS.

H. R. CLUM, Esq.,  
*Acting Commissioner Indian Affairs.*

No. 125.

NEW YORK, *November 22, 1871.*

SIR: In August last I received an appointment from the Department of Interior, as one of a board of visitors, (for 1871,) provided for under a treaty of October 2, 1863, with the Red Lake and Pembina Indians. Subsequently, I was requested by the chiefs of the Chippewas of the Mississippi to act as one of the board of visitors in their behalf, provided in the seventh article of the treaty with them, May 7, 1864. There are associated with me in this service Rev. H. M. Tenney, of Winona, Minnesota, Rev. E. F. Williams, of Chicago, Rev. Samuel K. Stewart, St. Cloud, Minnesota, and Rev. A. J. Pike, of Sauk Centre, Minnesota. I am requested by these gentlemen to report in their behalf. We are gratified at being able, without qualification, to endorse the action of Agent Smith in regard to the annuity payments to these Indians strictly just, and, in our belief, in accordance with the terms of the treaty and the acts of Congress. We were also highly gratified with the evidence of progress we witnessed, a progress specially remarkable in view of the lateness of the season and the difficulties that lay in the agent's way at the commencement. The satisfaction expressed by the Indians, and their growing confidence in the Government and its employés, give much promise of greater good in the not distant future. Your special attention is invited to the favorable condition of affairs at the White Earth reservation, where we understand thirty-six townships of land are set apart for the Chippewas of the Mississippi, and where permanent improvements are commenced, and a Christian mission started by the Episcopal Church. The accompanying paper, inserted A, furnishes a schedule of the improvements and farm products at this place. This reservation has unsurpassed facilities for the experiment of civilizing these Indians; its scenery is beautiful, its soil fertile and well adapted to agricultural purposes, well wooded and watered, and by the construction of the North Pacific Railroad it is made easily accessible. The reservation is large enough to furnish good farms for the Indians of Minnesota that can be induced to locate there, and it seems, therefore, to be the place above all others for the solution of the problem of the civilization of the Chippewas. The true policy is, we believe, to concentrate them at this point as fast as possible; encourage them to agricultural pursuits by the ordinary stimulus to labor, and provide for the education of the children and youth under agencies which shall be held to strict accountability to Government for their treatment of the people. The importance of this reservation creates a demand for the immediate establishment and liberal support of permanent institutions worthy of Government. A praise-worthy commencement has been made in the school-building referred to in the schedule, and we earnestly recommend that another similar one be built the coming season, for the accommodation of the girls, and an ample appropriation be made for its support.

The difficulties at the Mille Lac reservation, from the encroachments of the whites, still continue, and the board of visitors respectfully suggest that suitable inducements should be offered to the Indians, and a liberal appropriation for their removal to White Earth be made, in accordance with treaty stipulations. It is believed that, as members of the Chippewas of Mississippi, they have a right to a part of that reservation. We suggest also whether some arrangement cannot be made, by purchase or otherwise, by which Indians of other tribes may, if they choose, settle at that point and enjoy its benefits. We know of no other

place offering so many facilities for the settlement of these Indians, their encouragement in agricultural pursuits, the education of their children, and their early induction into citizenship. Nearly all the elements of success are there, and a wise liberality on the part of the Government will make it sure.

*Leach Lake.*—Here, as elsewhere, the payments were properly and satisfactorily made to the Indians. Some one or more of our company witnessed the whole. There is at Leach Lake a flourishing school, started under Mr. Strong, but it does not, and cannot under the present provision, meet the educational wants of the people. The school should double its numbers, and, under sufficient provision, might possibly be made to number 200 pupils; but, to accomplish this, a much larger appropriation for school purposes will be needed. The Indians of this region are not favorably located; but small portions of the soil are suitable for farming purposes, and the cultivated portions are so far apart as to make the agricultural experiment a costly one, and little likely to win the Indians away from their wandering habits. The board of visitors are unanimous in the belief that the best policy, both for the Government and these Indians, would be their removal to White Earth, or some other good farming country. If the removal of these Indians should not be deemed wise, the visitors think that, in addition to an increased school-fund, an appropriation should be made this winter for a new tug-boat, the rebuilding of the saw-mill, and the repair of roads and bridges.

The visitors to these bands beg leave to congratulate the Department in having obtained for this agency the services of a gentleman of so high a character for great integrity of purpose, rare executive ability, and untiring devotion to the work in which he is engaged, and that he has been able to call to his aid men every way well adapted to their several duties. They beg leave also to suggest, first, that some provision should be speedily made to facilitate the detection and prompt punishment of those engaged in selling whisky to the Indians; the process is at present slow and expensive. It may be worthy of consideration whether the giving of half the fine to the informant might not facilitate the destruction of this lawless traffic. Second, the division of the field by the appointing of a sub-agent under Mr. Smith, for the Red Lake and Pembina Indians. The field is too large, with too many important points, to allow of the best results under the sole agency of any one man. Third, the salaries of the agent and all the employés, teachers, physicians, farmers, blacksmiths, &c., should be largely increased; they are confessedly inadequate to the situation. If report be true, unscrupulous men in time past could increase their income and even enrich themselves at the expense of Government and the Indians. Is it not the duty of Government to take away the temptation to do this, by providing salaries that will enable honest men to hold these positions without dependence upon the contributions of the benevolent? Nowhere else has the Government men holding so responsible positions so inadequately paid, and nowhere is there more demanded those high business and moral qualifications, to secure which wise and prudent business men are willing to make liberal remuneration.

In behalf of the board of visitors of the Red Lake and Pembina Indians, and of the Chippewas of the Mississippi.

GEO. WHIPPLE.

The COMMISSIONER OF INDIAN AFFAIRS.

## A.

*Improvements at White Earth, 1871.*

1 school-house, 30 by 48 feet, main front 2 stories high, with two wings 20 by 32 feet; 1 agent's house, 25 by 36 feet, with wings 14 by 21 feet, and two stories high; 1 doctor's house, 25 by 36 feet, one and a half stories high; 1 miller's house, 24 by 32 feet, one and a half stories high; 1 office, 24 by 32 feet; 1 warehouse; 25 Indian houses, 18 by 25 feet, of hewn logs, boards, and shingle roof; 3 wells dug; 2 root-houses; 1 brick-yard made, and kiln of brick burned; 1 lime-kiln; 3 coal-kilns; 250 to 300 tons hay cut and stacked; 40 acres oats cultivated, yielding 1,000 bushels; 30 acres wheat, 500 bushels; potatoes, 1,000 bushels; turnips, 1,000 bushels; beans, 50 bushels; corn, 150 bushels, besides a good supply of squashes, melons, onions, carrots, and other vegetables. It is estimated that one-half of the oats and one-third of the wheat were destroyed by grasshoppers, and the buckwheat an entire failure; corn nearly so from the same cause. There have been 150 acres, in lots of from 3 to 5 acres each, of new land broken up for farms, and 5 miles of road cut through the timber. One substantial bridge, 30 feet long by 20 feet high, and several other smaller ones built, and one mile of fence made; 350,000 feet pine lumber sawed; 150,000 to 175,000 feet pine logs cut and in boom, and 50,000 feet hard-wood lumber sawed.

## No. 126.

OFFICE OF THE SUPERINTENDENT OF INDIAN AFFAIRS,  
*San Francisco, October 1, 1871.*

SIR: I have the honor to submit a special report upon the condition of the Mission Indians of San Diego, Los Angeles, and San Bernardino Counties, with a brief history of the recent difficulties among them.

According to last census, there were five thousand and fifty-six of the Coahuillas and Mission Indians in San Diego and San Bernardino Counties alone.

The Coahuillas are scattered through the San Bernardino and San Jacinto Mountains and eastward in the Cabezón Valley.

The Mission Indians proper comprise those living in San Pasqual and Pala Valleys, San Louis Rey, Temecula, and other localities in their vicinage. Many of them are employed by whites as laborers and herdsmen. They all speak the Spanish language, and many of them understand the English. They are usually designated as the christianized Indians, because they and their ancestors were baptized by the Catholic priests, and lived about the Missions.

The Coahuillas are far less civilized and affiliate more with the wild Indians of the plains and the Colorado River.

Although not recognized by the Government in their tribal relation, it has been the custom ever since the establishment of the California superintendency, for the Indian Department, through the superintendent, to appoint one of the Mission Indians as general or chief, whose duty it is to appoint sub chiefs or captains, and to exercise a general supervisory control over them and the Indians. This position has been filled for many years by Manuelito Cota, a man now in the prime of life, and who, through his superior intelligence and energy, early acquired, and, until recently, retained the undivided confidence of his people. Very few of the Indians in California possessed any legal title to the lands they occupied.

San Pasqual and Pala were established as Indian pueblos under the secularization law of 1834. These lands had long been occupied by the Christian Indians, and in 1835 were divided among them by the priests and prefect in accordance with said laws, and were occupied by them until dispossessed by squatters within the last few years.

Prior and for some time subsequent to the acquisition of California by the United States, every *ranchero* or land proprietor favored the presence of friendly Indians upon his ranch, and their villages sprang up all over the southern counties, and from them the owners obtained their laborers.

These large tracts have passed from the hands of their ancient proprietors, and been subdivided into smaller farms, where owners now claim the ground formerly cultivated by the Indians outside of Pala and San Pasqual, and settlers have taken up most of the land in these valleys.

The possessory claim of the Indians to land has never been deemed a serious impediment to white settlers; the latter always take by force that which they fail to obtain by persuasion.

Conceiving that this state of things would ultimately leave the Mission Indians homeless, I recommended in my annual report for 1869 "that certain lands at Pala and San Pasqual Valleys, in San Diego County, which had been given to the Indians by the Mexican government, be removed from public sale, surveyed, and set apart as a reservation." I stated "that the Indian claims to these lands had never been presented to the board of land commissioners appointed under the act of 1851 to settle private land claims in California, and were consequently disregarded by the settlers, the lands being presumptively a part of the public domain."

On the 31st day of January, 1870, pursuant to this recommendation and a similar suggestion made by J. B. McIntosh, then acting as superintendent of Indian affairs for California, the President of the United States made an order setting apart those lands for an Indian reservation, and a proclamation was issued to that effect.

The settlers, coveting the valleys, formed an organization against this movement. They employed counsel at home and in Washington to draw up and present to our Representatives in Congress and the President of the United States papers falsifying facts, for the purpose of obtaining a revocation of the order.

I am informed by Indians, and by white men of great respectability, that a notorious monte-dealer by the name of McCan, residing at New San Diego, prepared a remonstrance against the reservation, and, with the assistance of two others, attached to it several hundred names, (Indian and Mexican,) and transmitted it to Washington. Some of these names were collected from old church records, and were the names of Indians and Mexicans who had been dead for years; and none of them, if I am correctly informed, were written or authorized by the parties to whom they belonged. McCan subsequently boasted of his success, and the facility with which so many signatures and marks could be made by three scribes only. For this valuable service McCan received \$40 from Olegario, \$20 from Manuel Largo, and smaller sums from various other mountain Indians, who had become, through false representations of the settlers, opposed to a reservation. This, with other documents of a kindred nature, was taken to Washington by Ben. O. Truman, and on the 17th day of February, 1871, the order of the President was revoked, and the special agent for the Mission Indians soon after dismissed.

No one understood this whole matter better than Manuelito Cota, chief of the Mission Indians. He had listened to the objections urged against it, and was fully aware of the true objects sought by those who had deceived some of his people. He was aware that he himself had no valid title to the land upon which he had lived during his whole life, and,

in common with them, was liable to be dispossessed of his home; and, believing that he and they possessed a good, equitable title to the lands at Pala and San Pasqual, and that they should be secured to them for a home, had seconded the efforts of the Indian Department in that behalf. This course brought upon him the enmity of those who were opposed to the reservation, and every effort was put forth to destroy his influence among the Indians. The latter were told, and, in many instances made to believe, that it was a scheme to deprive them of their present homes, herd them in the valleys of Pala and San Pasqual, where, surrounded by bayonets, they would be compelled to work for Government officers; that Manuelito was their enemy and privy to a scheme for their enslavement; and, finally, the county judge of San Diego County formally appointed and commissioned a turbulent Indian by the name of Olegario as general-in-chief in place of Manuelito, whom, the judge certifies, had been deposed by the Indians, and also that Olegario had been elected by his people; all of which was untrue, as no election had been authorized by the Indian Department, nor had any general council of the Indians been convened for this or any purpose. For this certificate and appointment the county judge received \$250. He also subjected himself to a fine of \$500, under a statute of the State of California, for his interference with Indian affairs.

Clothed with this iniquitous and illegal document, Olegario assumed to act as chief. His pretensions being disregarded by Manuelito he went to San Diego, and, as he says, was then authorized by the county judge to "raise the banner," and was furnished by him with the halliards for the purpose, with a promise to be present on the occasion. This formal declaration of authority was made at the residence of Olegario in the early part of August last, in the presence of his adherents, collected for the purpose, and upon whom he imposed a tax of three dollars each. An order was then issued by him that Manuelito should be scourged with two hundred lashes on his bare back, and salt applied to the flesh-wounds, and if he resisted he should be shot. This sentence was communicated to Manuelito by two Indian alcaldes sent by Olegario for the purpose, with instructions to return his answer whether he would submit. His answer was "No."

On the 4th day of August, 1871, Olegario seized an Indian woman, the wife of one Gregario Trujio, and a relative of Manuelito, and had her suspended by the wrists from the limb of a tree, her toes barely touching the ground. She was kept in that agonizing position until an Indian had run more than a mile and notified her brother, who came and cut her down. For this the brother was savagely beat with clubs so that his life was despaired of for many days.

On the 6th day of August Olegario, with a strong party, assaulted and beat Manuelito, who managed, however, to make his escape. A few days afterward Olegario collected his adherents and informed them that Manuelito had refused to submit to his authority, and notified them to be at his place on the following Friday, (August 11,) for the purpose of going after Manuelito to kill him. A friendly Indian made his way to Manuelito in the night-time with this information, and on the morning of the 10th he and his family went to the ranch of Colonel Cane J. Coutts for protection. At that place he and Colonel Coutts telegraphed to the superintendent of Indian affairs, giving a history of the difficulties briefly, and stating, also, that Manuel Largo, chief of the Coahuillas, had been interviewed by Olegario, and was then on his way across the mountains with his warriors to join him. Copies of the correspondence are hereto annexed, and marked Exhibits A and B, as also other corre-

spondence with the military officer subsequently there, and hereby referred to.

On the 19th of August I applied to Major General J. M. Schofield, commanding the Military Division of the Pacific, for an officer and fifteen soldiers to protect Manuelito and his family until I could go to Pala and investigate the matter. A small force was at once dispatched from Drum Barracks to Pala. Other dispatches, urging my immediate presence, hurried my departure from San Francisco, and on the 31st of August I left, reaching Pala on 6th of September.

Prior to reaching Pala, and while at Los Angeles, I was met by Olegario. He was accompanied by his special friend, Matthew Keller, and his counsel, John J. Warner and C. N. Wilson. He said he was anxious for a settlement of difficulties, and did not want to go to war with the whites, but that his people wanted him as their chief. Being informed that his appointment by the county judge was a nullity, he expressed a wish to be appointed by me, or elected by the Indians.

I promised Olegario to call a council of the Indians at Pala, on the 9th of September, for the purpose of inquiring into the causes of quarrel and the discontent toward Manuelito, and remarked that the latter had been unanimously elected by the Mission Indians in full council at San Pasqual, and appointed by me at their request, but that if I became satisfied that the charges he made against Manuelito were true, I would either order a new election or appoint a new general myself.

On the 9th of September, in pursuance of my request, a large number of Mission Indians, including Manuelito and his family, who were under the protection of the soldiers, assembled at Pala, as also Olegario's party, composed of dissaffected Missouri Indians, and a strong force of Coahuillas and Chimewavas, under Manuel Largo. Some of the leading ranch owners, and other persons residing in that part of the country, were present, taking a lively interest in the proceedings. All expressed serious apprehensions of trouble should Olegario be permitted to succeed Manuelito, and spoke in the highest terms of the latter. Manuel Largo acknowledged that he had promised to join Olegario as against Manuelito, for the reason that the former had exhibited to him the commission issued by the county judge, and had told him that the Government had withdrawn the Indian agent from San Pasqual; that, believing Olegario had been duly authorized by the county judge to war against Manuelito, as he represented, and that it was his duty as a sub-chief to obey his superior, he had in good faith brought his men across the mountains for that purpose. He expressed regrets that he had been led by false representations to act as he had. Satisfied that Manuel Largo had been deceived, I accepted his explanation, and expressed my approbation of his administration of the office of chief of the Coahuillas; that I had come from San Francisco to settle these difficulties as I deemed right and just; that I would try and satisfy the greatest number, and that the remainder must abide the result; that Olegario had been guilty of such cruelty and savage conduct that under no circumstances could he be placed in charge of the Mission Indians, nor could I permit an election in the then state of excitement.

I then proposed, with the approval of the Indians present, to reappoint Manuel Largo chief of the Coahuillas, and to appoint a new general for the Mission Indians, which was approved by nearly all. One Indian, unduly excited, said he had come a long distance over the mountains to make Olegario chief or fight; that he was ready to die; that the Government had sent ten soldiers to fight them, but the Indians could not be whipped; that the Government had been fighting the Apaches for

years, and had not whipped them yet. With this exception the Indians were satisfied of my desire to bring about an amicable settlement, and they expressed the wish to have me do so.

Upon being interrogated by me, each of the chiefs, captains, alcaldes, and other Indians, commencing with Manuel Largo and Olegario, agreed to abide by my determination.

I then requested Manuelito to resign for the sake of harmony, explaining to him that it was not because he had failed in his duties, but that his life had been threatened by the party opposed to a reservation. He replied that he would cheerfully do so; that he had spent a great deal of time, money, and other means of his own in endeavoring to carry out the instructions of the Indian Department; that he had killed his cattle and sheep to feed starving Indians, and he desired I would state to the Indians present whether he had discharged his duties as general in a faithful manner toward them and the Government. I did so, in all sincerity, as I had made diligent inquiry into the newspaper and other charges against him, and found nothing to censure in his course.

I then formally appointed Joe Antonio Sal as general over the Mission Indians, and Manuel Largo over the Coahuillas, their respective jurisdictions separated by the San Jacinto Mountains.

Some few expressions of disappointment at not being allowed to go into an election were uttered by the Olegario party. They were informed that it would be unjust toward the Christianized Indians for the mountain Indians to impose a chief upon them, and hereafter they would be under their own chiefs respectively. This elicited their approval. I then distributed some blankets among them, and the council broke up in harmony, all the Indians expressing their satisfaction at the successful result.

Since then certain designing white men have labored sedulously to incite another difficulty among the Indians. A series of newspaper articles, sparing of the truth, have been published by John J. Warner, who appeared at Pala as counsel for Olegario, the object of which is evidently to bring about the election or appointment of Olegario as general. As a fee of \$500 is contingent upon such result, the disinterested nature of Warner's efforts is apparent.

While the Mission Indians were collected at Pala, and under the protection of the military, to wit, from the 20th of August to the 14th of September, it was necessary to provide forage for animals used by expressmen, also subsistence for Indians. Vouchers therefor, as well as for salary of interpreter, traveling expenses, transportation, &c., have been paid and will be found incorporated in my regular quarterly account.

Respectfully submitted.

EXHIBIT A.

SAN LUIS REY, *August 10, 1871.*

Hon B. C. WHITING, *Superintendent of Indian Affairs :*

I came here to-day to get Mr. Coutts to write the following:

On Saturday, July 29, Olegario had a gathering of the Indians at Ruicon to raise the banner, thereby demonstrating to all that he was the captain general. I did not go.

The Indians of all classes went, and all got drunk. Manuel Largo, from Rancheria Bautesta, general of Coahuillas, was present. He told them that Manuelito had heretofore been their general, and joined the Americans during the revolution, and now wanted to put them in "Pueblo." By Pueblo means locating them on Pala and San Pasqual; that all must recognize Olegario as the general, and then put the question if they would. On saying yes the banner was raised.

Olegario then gave his orders. All the Indians in favor of Manuelito should not have land or build houses; all who wanted to join him should pay \$4.

The Indians favoring me are now much molested; not allowed to work or change their ways, as heretofore, from their planting-grounds in summer to winter-quarters.

Sunday, the 6th instant, they had a difficulty at Apechi Rancheria. All got drunk, and the two parties got to fighting, the party of Olegario getting badly hurt, (*lasti mado*.) The cause was tying up Margarita, a relative of Manuelito, and owner of the Potrero Rancho, where they were.

The same day another dispute arose in Pala by the *partido* of Olegario threatening what they would do with the *partido* of Manuelito, and fought. Three of the Olegario party were badly hurt, (*lasti mado*.) Olegario came with me to Pala, and I told him he was acting badly with the Indians, letting them get drunk, fighting, &c., and the first thing he knew they would be in a general row, (*foruca*;) that I was always ready to punish my Indians (*gente*) when they acted badly. Tuesday last I met Olegario in Pala. He wanted me to send my *gente* to his house. I declined, telling him I did not recognize his authority, and that I was general of the Indians under authority of the Government. He answered that he was general under act of the Indians, and did not recognize me, and came on me for a fight. I am disabled to a certain extent, and he threw me. The Indians around immediately separated us. I was armed, but I could not use them for fear of hurting some one else. After separation, (neither of us hurt,) he left, and is now gathering up his *gente*; do not know for what purpose, whether to take me, or get his *gente* and mine to fighting. All my *gente* are much alarmed and excited—is why I came to Mr. Coats to write this letter to the superintendent, and would ask the very earliest action in the matter, to prevent the killing of Indians on both sides. If this is not done quick there will be much killing; it has already begun.

Before the raising of the banner I went to San Diego to see Judge Bust, showing him my appointment by you, and to get his advice, fearing some trouble might turn up. Judge Bust told me he had nothing to do with it.

Your obedient servant,

his  
MANUEL + COTA, General.  
mark.

B. C. WHITING, *Superintendent of Indian Affairs* :

There is no agent here. I find Manuelito Cota will be opposed by Manuel Largo, chief of Coahuilla Indians; that he had no less than one hundred and fifty men to join Olegario this week. Your presence is much needed. Hostility toward Manuelito Cota is not diminishing. I am under the impression you could settle the matter without much trouble; though may be mistaken. But to arrest Olegario at present will require many more soldiers than I have to prevent bad treatment afterward to Manuelito Cota's people. I have only five men with me. Olegario promised to behave himself until you reached here, thinking you would be here soon. However, I have no confidence in anything he says, though am strongly under the impression your presence would be of great importance at this time.

No. 127.

RED CLOUD AGENCY, WYOMING TERRITORY,  
October 26, 1871.

SIR: In making this my annual report for 1871, I have the honor to state that, in compliance with instructions, dated Office of Indian Affairs, Washington, D. C., March 11, 1871, I proceeded without delay to Fort Laramie, Wyoming Territory, where I found assembled Red Cloud, chief of the Ogallallas; Red Dog, chief of the Minneconjous; Red Leaf, chief of the Brulés; Little Wound, Long Wolf, and White Tail, also Brulé chiefs; Dull Knife and Turkey Legs, chiefs of the Cheyennes; and Little Shield, Medicine Man, Sharp Nose, and Friday, chiefs of the Arapahoes.

My first object was to ascertain as nearly as possible the number of

these several bands respectively; and, secondly, what proportion they were of the entirety who would claim the rights and benefits of the Red Cloud agency. This plan was more easily conceived than executed, as the whole number depended principally upon the terms on which the Government, through its agent, could settle with the Indians the question of location of an agency; and, notwithstanding their recent return to peace, and the uncivilized nature of many bands of the northern Indians, I hoped to soon be able to accomplish this grand leading object, and to report to the Department that its fondest hopes had been realized, and its earnest pursuits had been at last accomplished in the possession of an agency in the interior of the Indian country, far from the contaminating influence of irresponsible white men. Full of these gratifying anticipations, I asked the Indian chiefs and head-men to meet me at Fort Laramie, Wyoming Territory, on the 10th day of May, 1871; and, in pursuance of this call, the chiefs and head-men and many braves assembled there in council, numbering two hundred or more. There were also present Colonel Blunt, commanding the post, W. G. Bullock, post-trader, with many officers of the Army and citizens of the adjacent country. I told them there of the wishes of the Government in regard to the location of their agency, and that the Great Father wished to feed them and clothe them, but he would have them on the north side of the river, and that, as long as they were peaceable, the Great Father would take good care of them. To this proposition they seemed perfectly willing to accede, so far as to accept food and clothing, but they wanted them on the south side of the river. They were so persistent in these objections, and their reasons were so vague and unsatisfactory, that I determined that there was some other and more weighty reason for all this opposition than anything they had yet stated, and set myself to work at once to ascertain the true cause, and found that there were conflicting interests among the citizens of the Platte and Laramie Valleys, (known here as "men of the country.")

When it became known to these that the policy of the Government was to exclude them from the reservation, and to prevent the indiscriminate traffic which had long been going on between them and the Indians, they objected to having an agency north of the river, and offered every inducement to the Indians to remain where they were, telling them that the object of the agent and the whites generally was to get into the Black Hills, where there was much gold, and that their country would be overrun with adventurous white men in search of the precious metal.

After having satisfied myself of the existence of this spirit of opposition, and being still further satisfied that I could not dissipate or overcome it while there, I determined, if possible, to get away from its evil influences by establishing a temporary agency somewhere on the north side of the Platte, at a point the farthest possible from Fort Laramie.

However, before taking any steps in this direction, I made another attempt to get their (the Indians') consent to establish a permanent agency on Raw Hide Creek, some forty miles north of Fort Laramie. But this request was flatly refused, on the ground that it was in the direction of the Black Hills.

The time was drawing near when the arrangement made with the Subsistence Department for supplying the Indians with rations would expire by limitation, and the order had been issued by the Interior Department to issue no more rations to them on the south side of the river; nor on the north side, unless they established an agency, after the 30th day of June, 1871. This fact was presented to them, but from their con-

fidence in the generosity and forbearance of the Government, or, what is most likely, from the many deceptions which had been practiced by former agents and emissaries of the Government, they did not seem to believe it, and stoutly refused to locate anywhere north of the Platte River, until the time, for which arrangements had been made to supply them, had expired, and the rations were withheld from them, and the keen demands of appetite began to press them to action.

The chiefs and head-men then met in council on the 29th day of June, and selected the site we now occupy, thirty-two miles below Fort Laramie, on the north side of the Platte River, and asked that I occupy it as soon as possible, and resume the issue of rations.

This action of the Indians was made known to the Department by telegram dated Fort Laramie, Wyoming Territory, June 29, 1871, and in the mean time the Indians were requested to be as patient as possible, and await the action of the Great Father in the case. To this proposition they waited rather reluctantly, (for patience is not one of their leading virtues.) On the 9th day of July, I received the following telegram:

WASHINGTON, D. C., July 8, 1871.

To J. W. WHAM,

*United States Indian Agent, Fort Laramie, Wyoming Territory:*

Resume issue of rations and locate temporary agency, as Indians wish. Steps will be taken to have goods and supplies forwarded from Cheyenne. Receive cattle from Hughes.

H. R. CLUM,  
*Acting Commissioner.*

This order found me entirely without supplies, except flour and beef. I telegraphed immediately to Cheyenne for a supply of coffee, sugar, bacon, soap, salt, and tobacco. But as it would necessarily be two weeks before the supplies could reach me, I at once telegraphed the Department to issue double rations of beef until the other rations arrived, and in reply received the following telegram:

WASHINGTON, D. C., July 15, 1871.

To J. W. WHAM,

*United States Indian Agent, Fort Laramie, Wyoming Territory:*

Issue double rations of beef till other rations arrive.

E. S. PARKER,  
*Commissioner.*

A compliance with the order rendered general satisfaction on this point, and as other goods had been ordered forward, I telegraphed the Department that I had no store-rooms for protection of supplies when received, and in reply received the following answer:

WASHINGTON, D. C., July 17, 1871.

J. W. WHAM,

*Indian Agent, Fort Laramie, Wyoming Territory:*

Make best temporary arrangements possible for subsistence stores.

E. S. PARKER,  
*Commissioner.*

On receipt of this instruction, I at once set about making the arrangements contemplated in the above order. I accordingly purchased some tents and tarpaulins from the depot quartermaster at Camp Carlin, for use of office and quarters for self and employés, and protection of stores.

As many of the Indians had already arrived here, I forwarded sup-

plies about the 1st of August, and on the 3d moved my office to the site now occupied.

I was now, after five months' hard labor, actually across the river, and was able to report to the Department from the Red Cloud agency, north side of the Platte.

I soon discovered that the cost of any temporary arrangements, which would be a real protection for supplies, would be at least 80 per cent. of the cost of permanent protection; hence, taking it as a necessity which would not admit of the delay necessary to ask for and receive instructions from the Department, I at once arranged with responsible parties to have two log buildings erected, 30 by 65 feet, for use as store-houses for those articles of supplies most easily injured by storms, and I am now fully persuaded that this was best, as we shall most likely remain here during the winter, in which case no temporary affair would stand the storms of snow and hail which sweep over the plains during the winter season.

The various articles of supplies furnished by the Government now began to arrive, and the Indians were receiving them again at intervals of five days, and as train after train was unloaded and stored, they began to realize that the Government was in earnest; that for once, at least, it would fulfill the promises it had made. All was peace and quiet; confidence was being established, and a general good feeling existed. This, however, was destined to be of short duration.

About this time there arrived a train laden with supplies for the Whetstone agency at Fort Laramie. Agent Washburn, and Spotted Tail, were both at Laramie, and were asked to furnish escort for the train across the country to Whetstone agency, as it was considered unsafe for white men to attempt to cross through the Indian country against the provisions of the treaty without an escort. This they failed to do, Spotted Tail refusing positively to have anything to do with the matter, and asserting that he considered it unsafe for the train to start unprotected, as there was existing a very strong feeling among all Indians against it, for they had been promised by the Great Father that no white man should ever invade their country under any pretense whatever, so long as they were at peace and friendly to the whites. While the matter was yet in this condition, Agent Washburn, and Spotted Tail, with the small Indian escort which had accompanied them on their visit to Fort Laramie, started on their return for Whetstone agency, without having made any arrangement for having supply-trains escorted across the country to their agency, which, at the same time, they protested was necessary in order to insure their safe transit, Spotted Tail positively refusing to have anything to do with the matter.

However, Quick Bear remained another day at the fort, and said he would like to have the train of goods for Whetstone remain at Laramie until he could go to his agency and return, either with permission for the train to cross or with a positive refusal.

Arrangements were accordingly made with John F. Coad, the agent of the contractor, (D. J. McCann,) to wait eight days for an answer from the Whetstone agency. Thus matters stood, until the time had expired in the which Quick Bear should return, when the contractor's agent made request for escort for train of supplies for Whetstone. An order was issued for post commander at Fort Laramie to furnish military escort for said train. This being made known to Richard Smith, the then acting agent for Red Cloud agency, who immediately addressed to Colonel Crittenden, commanding Fort Laramie, a note, setting forth the

able results of carrying the above-mentioned order into effect as follows:

RED CLOUD AGENCY, WYOMING TERRITORY,  
August 10, 1871.

I am informed that you have received instructions from department headquarters to escort train of supplies from Fort Laramie to Whetstone agency. Hence, your information, I have the honor to make the following statement of facts in regard to the matter, as I have learned them from Spotted Tail and his chiefs and bandmen.

That they are unanimously opposed to having trains of supplies cross their reservation from the vicinity of Fort Laramie.

That he will not furnish an escort from his band for trains from this point, and as that it would be unsafe for any trains to cross from this point, even though he would furnish an escort, as the opposition is so great that he, Spotted Tail, would not be able, with all his force, to withstand it, and the chiefs of the bands now here who possess the strongest friendship for the Government, and who are well satisfied with the Government is now doing for them, inform me that an attempt to send a train across the country from Fort Laramie to Whetstone with a military escort will necessarily result in a war between the Indians and the Government, as they have been notified on all occasions that no soldiers should enter their reservation so long as they were peaceable and friendly toward the whites, and I am fully satisfied that an attempt to cross a train from the vicinity of Fort Laramie to Whetstone with military escort would result in a war between the Sioux nation and the Government. They will not submit to this incursion, which they consider an invasion, quietly. I would respectfully suggest, for the sake of peace, that some change be made in regard to supplying Whetstone agency will be more agreeable to the Indians.

RICHARD SMITH,  
In Charge of Agency.

FOR E. W. CRITTENDEN,  
Fifth United States Cavalry, Commanding Post,  
Fort Laramie, Wyoming Territory.

And on same day, August 10, Acting Agent Smith forwarded to the Commissioner the following telegram:

RED CLOUD AGENCY, August 10, 1871.

R. CLUM,  
Acting Commissioner Indian Affairs, Washington, D. C.:

Spotted Tail wishes his goods delivered to him on the North Platte River. He will escort them to the interior of the reservation. Major Crittenden, commanding at Laramie, has orders to send military escort with trains across the reservation. This will result, evidently, in a general Indian war. They will not submit quietly to having trains cross the reservation. The post commander thinks he cannot send military escort across the reservation without bringing on an Indian war. For the sake of peace, can they not be permitted to receive their supplies on the North Platte River.

R. L. SMITH,  
In Charge of agency.

FORT LARAMIE, WYOMING TERRITORY,  
August 10, 1871.

H. R. CLUM,  
Acting Commissioner Indian Affairs, Washington, D. C.:

Spotted Tail refuses positively to furnish escort to train. In my opinion, if train is started with military escort, all that has been accomplished toward establishing Red Cloud agency will be undone, and an Indian war will result.

E. W. CRITTENDEN,  
Major Fifth Cavalry, Commanding.

In reply to the foregoing telegrams and communications, Major Crittenden received the following telegram:

WASHINGTON, D. C., August 11, 1871.

Major E. W. CRITTENDEN,  
Commanding:

Have requested suspension of orders relative to escort. Await further instructions. Send copy to Red Cloud agency.

H. R. CLUM,  
Acting Commissioner.

at least one  
million.

But the  
fact is that the  
number of people who  
are not getting the  
benefits of the  
new technology is  
increasing. The  
reason for this is  
that the new  
technology is not  
being used in the  
right way. It is  
being used in a  
way that is not  
beneficial to the  
people who are  
not getting the  
benefits. And if  
there are not some  
steps taken to  
correct this, every  
hand

should hunt on its own account there will be trouble between them and the white settlers in that region.

Those Indians with Yates, which comprise three-fourths of the whole party, are having eminent success, having no trouble with the citizens, and killing abundance of buffalo.

Under the head of educational and agricultural statistics I have no report to make but that the people are not yet quite prepared for the change. There are a few, however, who seem anxious to have a school, but this cannot be had with any show of success at a temporary agency. There must be a comfortable house for that purpose, and that should by all means be at least within the limits of the reservation.

As to farming, they are very much opposed to that, on the general principle that it is *labor*, and labor with an Indian is not to be thought of while there is any game in their reach; and I would suggest that it is an injury to the cause to "talk" agriculture to these Indians at present. But confine them to the limits of their reservation till they have killed or driven off all the game and are made dependent upon you for their subsistence; then you may with some hope of success tell them "what they should know about farming."

As I have never been permitted to cross over the reservation, I have but a poor idea of its natural adaptation to farming purposes, but am informed that it is a good grazing district and well adapted to the raising of horses, cattle, and sheep, and small grain. It is well watered and tolerably well timbered along the streams, with numerous springs, which afford ample water for winter use; and I fully believe that, properly cultivated, it is capable of sustaining all the Indians who claim to belong to it for all coming time.

I have the honor to be, very respectfully, your obedient servant,

J. W. WHAM,

*United States Special Indian Agent.*

---

No. 128.

FORT DEFIANCE, NEW MEXICO,

*November 15, 1871.*

SIR: I have the honor to submit this my first annual report relative to the condition of the Moqui Pueblo Indians of Arizona Territory, for the year ending September 30, 1871, over whom I have charge, as United States special agent:

On the 1st day of January last, I arrived at Fort Wingate, New Mexico, at which place I found the agency established for the Moqui Pueblo Indians. On the 2d day of January I relieved my predecessor, Captain N. D. Palmer, of United States Army, who kindly gave me much valuable information relative to the tribe over whom I was taking charge.

Soon after entering upon the duties of my office I visited my tribe, finding them living in villages on high bluffs of rock, almost inaccessible for man or beast, being some five hundred feet above the plains. Their buildings are of stone, and are very comfortable. The villages in which they live are named as follows: Taywah, Se-cho-ma-we, and Jual-pi, situated one hundred miles northwest of this place, and built

on one mesa; four miles west of this are the Me-shung-a-na-we and She-powl-a-we villages, situated on one mesa or bluff; two miles west of this is Shung-o-pa-we village, and from this in a westerly direction, ten miles, are the Oreybes, living in one village.

My reception by these people was of a cordial character, apart from the Oreybes, who manifested much hostility to me, saying they did not wish to have anything to do with the Government, and, I regret to say, a portion of them continue to be hostile. I also found the relation between the six villages and the Oreybes was not of a friendly character. I soon called the chiefs of the six villages together, and held a council on the subject. I tried to impress on their minds the importance of their living in harmony together, saying to them that the Government was not disposed to help a people who could not live in harmony among themselves. The chiefs said they had no unkind feeling toward the Oreybes, but the chief of the Oreybes was angry with them because they were friends to the white man and the Government. Our council closed by our agreeing to visit the Oreybes together, but our visit was not a very satisfactory one to the chiefs. The hospitality shown us was not in keeping with the customs of the Moquis. I have frequently visited the Oreybes subsequent to this, in company with the chiefs, but our reception was never of a cordial character. I also found an unfriendly relation existing between the Moquis and the Navajo Indians, growing out of the Navajo war, but, by the assistance of J. H. Miller, agent for Navajo matters, have been amicably settled, and I take pleasure in saying the two tribes are living on terms of perfect friendship. I regret to say it is impossible for me to give the population in full of the Moqui Pueblos. Early in August I visited the Moquis with a view of taking the census preparatory to my report, and was successful, apart from the Oreybes, the chief utterly refusing me the privilege. The other six villages, their population as follows, taken August 3, 1871:

Tay-wah, 121 adults, 42 children—total, 163; Se-cho-ma-we, 70 adults, 33 children—total, 103; Jual-pi, 218 adults, 115 children—total, 333; Me-shung-a-na-we, 151 adults, 87 children—total, 238; She-powl-a-we, 78 adults, 31 children—total, 109; Shung-o-pa-we, 127 adults, 49 children—total, 176; Oreybes, taken September, 1869, 308 adults, 174 children—total, 482; grand total, 1,604.

Early in the month of February I received an order from the Department dated January 23, 1871, on the quartermaster at Fort Wingate for certain goods in his care belonging to the Moqui Pueblo Indians. After taking charge of the goods I sent for the Moquis to bring their donkeys and transport the goods to the Moqui villages, regarding it the most economical mode of transportation. Late in the month of February the Moquis arrived, bringing sixty donkeys. The goods were at once packed on the donkeys, and on the 8th and 9th of March issued a portion of the goods in the presence of Lieutenant Stevenson, of the United States Army, to all of the Moquis, apart from the Oreybes, who, at that time, refused to accept anything from the Government. I however retained the portion of the Oreybes, hoping, by kind treatment, their feelings might be overcome.

Again, June 10, 1871, in presence of Lieutenant Brinkerhoff, of United States Army, I issued amount of goods on hand, at which time a large portion of the Oreybes gladly accepted their portion, but the chief refused to accept anything. This issue was after the planting season. I found it a great stimulus for them to plant largely, making it a condition so soon as they planted largely I would issue them the goods.

I spent much time in the early part of the farming season among them, having obtained many seeds for their benefit. Their crops were very flattering up to the 1st of August, but the drought which has affected this entire land has caused an entire failure of the Moqui crops, yet it is to be hoped that they have sufficient amount of old corn of last year to bread them the coming year. It is impossible for me to give an estimate of amount of lands cultivated by the Moquis, as they farm in small patches, extending from east to west some fifteen miles, being in some places a very narrow strip.

Their lands are not susceptible of irrigation, and failures are very common; and when they are successful they do not sell the surplus but store it away, fearing a famine in future. Should next year be as this, starvation will be inevitable without assistance from the Government. They are very poor, and depend entirely on agriculture for subsistence. The entire tribe have about 1,000 sheep, and 100 donkeys, and their resources to accumulate are very limited; and while these people are much attached to their locality, being the home of their fathers, I would respectfully suggest the importance of removing them to some other locality. I will give the following reasons for making this suggestion:

1st. The Moquis are an agricultural people, depending entirely on the products of the soil. The lands which they cultivate are not adapted to farming, there being no facilities for irrigation. Should they give their attention to stock, they have comparatively no grazing. Their farming lands are nothing but a sandy plain. Their crops are often much injured by drifting of the sand. Great scarcity of water; not sufficient for any quantity of stock. With their limited resources, their progression must necessarily be slow.

My second reason is this—their isolated locality. While they are very anxious for missionaries and teachers to locate among them, I find much difficulty in obtaining either. There are so many fields vacant that are more accessible that but little attention is given to the Moquis.

It is true the man who makes his home among those people is nothing more than an exile, being one hundred miles from post-office, one hundred and fifty from any point to obtain the necessaries to sustain life.

My third reason for removing these people, which I regard as a very important one, is their association with the Apache Indians. It is a well-known fact that the Oreybes have been for many years very intimate with the Apaches, and I know they are constantly visiting back and forth; the result is, a portion of the Oreybes are much demoralized. I have faith to believe if these people could be favorably located, there is a bright future for the Moquis.

As regards a locality for these people, I would respectfully suggest Old Fort Wingate, as having all the resources that are desirable in this country, grazing unlimited, good agricultural lands, water in abundance for stock and irrigation, wood for all practicable purposes. Again, I would respectfully suggest, if it is the pleasure of the Department to continue their favors to the Moquis, that in place of goods they be furnished with sheep, apart from a few articles to be used as rewards of merit among the school children to stimulate them to prompt attendance, and to application in their studies.

As regards the moral condition of the Moquis, while they are very ignorant and superstitious, I have no hesitancy in saying they are unsurpassed in point of honesty, child-like in all their actions, living lives of virtue, and not suffering from the results of living lives of licentious-

ness, as are many tribes of Indians. Good health among the Moquis has been universal during the last year.

Hoping that the few suggestions I have made relative to the interest of the Moquis will meet the approbation of the Department,

I am, respectfully, your obedient servant,

W. D. CROTHERS,  
*United States Special Agent for Moqui Pueblo Indians,  
Arizona Territory.*

Hon. H. R. CLUM,

• *Acting Commissioner of Indian Affairs,  
Washington, D. C.*

# REPORT

OF

## THE ARCHITECT OF THE CAPITOL EXTENSION.

---

ARCHITECT'S OFFICE, UNITED STATES CAPITOL,  
*Washington, D. C., November 1, 1871.*

SIR: I have the honor to submit the following report, showing the condition and progress of the work on the Capitol building, and the general operations of this office, since the last annual report.

### CAPITOL EXTENSION.

By direction of the Committee on Ventilation a new floor has been placed in the Hall of Representatives, so planned as to make space for additional desks. The flues beneath are so arranged as to distribute fresh air more equally than heretofore from the fronts of the platform through adjustable registers.

The ventilating shaft has been considerably enlarged so as to insure a copious supply of air. A steam-engine, with two large fans, capable of expelling 50,000 cubic feet of air per minute, has been placed in the cellar of the south wing.

These changes will insure a rapid change of air even in such conditions of the atmosphere as when the present method is inefficient—that is, when the air is cold, moist, and foggy, and at times when the winds pack against the dome, and cause downward currents in all flues and outlets exposed to such winds. Some changes have been made in the floor of the Senate Chamber by the introduction of registers of a peculiar construction, devised by the Senate engineer. Fire-places have been placed in the cloak-rooms of the Senate, a line of shafting placed under the roof, by which the blinds of the sky-light can be adjusted with ease.

The lighting apparatus of the Senate will be started by means of "Nilson's electric lighter," which is now being put in place.

The corridors leading from the Senate to the Hall of Representatives have been enlarged, and the depressed floor between the rotunda and the old Hall has been raised to a line of the adjoining floors. The Rodgers bronze doors have been taken from the corridor and placed at the central entrance of the east front. Many rooms and passages have been painted. The decorations of the room of the Committee on Military Affairs of the Senate have been completed by three pictures in fresco, from subjects chosen by the chairman of that committee. The decoration of the Senate reception-room is progressing, leaving places to be filled in with portraits.

The terraces have been nearly completed, and the flagging laid, with the exception of the space in front of the western portico of the south wing, which space has been left unfinished, on account of the necessity of taking down and resetting the steps of this portico.

The steam-pipes of both wings have been covered with a fire-proof

felting, which has, so far, proved satisfactory as a non-conductor of heat; I believe quite a saving will be effected in the item of fuel by thus covering these pipes. The steam from the wings has been further extended in the central building, so that now nearly all the rooms and passages in that portion of the building have the benefit of heat from the wings.

The whole exterior of the old portion has been painted, as well as a large portion of the interior; the copper roofs have been kept in order and improved. The statuary of the central portico has been cleaned by means of the chisel, all other methods tried proving ineffectual, owing, I believe, to the injudicious use of acid in former cleaning. The old door-way at the central entrance of the east front has been cut away, to make space for the bronze doors, and a new door-way supplied

#### EXTENSION OF THE CAPITOL GROUNDS.

A large amount of earth has been deposited on the grounds at the south; a temporary roadway made on the north, marking the proposed arc, running from B street to Pennsylvania avenue and First street. I earnestly recommend that these grounds, or so much as now belongs to the United States, be laid out and planted, and that the street at the north be curbed and paved. The grounds at the south, being newly filled, will undoubtedly subside so much that, in my opinion, it would be useless to attempt planting next season. The time has now arrived when attention should be given to the grounds and streets around the Capitol, and I therefore recommend that the plateau at the eastern front be paved.

#### BOTANICAL GARDEN.

For the last few years the improvements and repairs of the buildings, &c., at the Botanical Garden, by the direction of the Joint Committee on the Library, have been done under the direction of this office.

During the last season the iron railing on Maryland avenue has been completed, the flagging of the main walks finished, and a large basin, with marble coping, for the fountain, has been made, one green-house entirely reconstructed, and several others enlarged.

The attention of the committee having charge of these grounds is respectfully called to the condition of the wooden portion of the conservatory. It is in such a dilapidated condition that its destruction is possible at any high wind. To secure it for the present it has become necessary to place props at the south side, the winds having already forced the walls out of the perpendicular line. I therefore recommend that a wing, corresponding to the one at the west of the rotunda, be constructed.

#### EXTENSION OF THE GOVERNMENT PRINTING OFFICE BUILDING.

The extension of this building, authorized by act of Congress approved March 3, 1871, has been completed, and is now occupied. It is now one of the most extensive and convenient establishments for the purpose extant. A large amount of work has been done not contemplated in the original estimate, such as fitting up library, shelving stereotype and store rooms, the cost of which has been paid out of the sum appropriated for the construction of this extension.

## PATENT-OFFICE BUILDING.

G street, from Seventh to Ninth streets, has been paved with an asphaltic concrete pavement, which was recommended by the owners of the larger portion of the property on the line of the pavement, who have to pay the expense of paving the northern half of this street.

Annexed are the statements of the expenditures of this office during the last fiscal year.

## CAPITOL EXTENSION.

*Amount expended from June 30, 1870, to June 30, 1871.*

|                                                                                  |             |

# FOURTEENTH ANNUAL REPORT

## OF THE

### COLUMBIA INSTITUTION FOR THE DEAF AND DUMB.

COLUMBIA INSTITUTION FOR THE  
INSTRUCTION OF THE DEAF AND DUMB,  
*Washington, October 30, 1871.*

SIR: In compliance with the acts of Congress making provision for the support of this institution, we have the honor to report its progress during the year ending June 30, 1871.

#### NUMBER OF PUPILS.

|                                                                                        |                |
|----------------------------------------------------------------------------------------|----------------|
| The pupils remaining in the institution on the first day of July, 1870, numbered ..... | 76             |
| Admitted during the year .....                                                         | 24             |
| Since admitted .....                                                                   | 19             |
| <br>Total .....                                                                        | <br><u>119</u> |

Under instruction since July 1, 1870, males, 101; females, 18. Of these 64 have been in the collegiate department, representing twenty-three States and the District of Columbia, and 55 in the primary department. Eight have left the college during the year, and seven have left the primary department, one having been removed by death. A list of the names and residences of pupils will be found appended to this report.

#### HEALTH OF THE INSTITUTION.

Another year of almost unbroken exemption from disease has been vouchsafed to us. One case of sickness, however, terminated fatally, after a duration of but ten days, taking from our number Miss Virginia A. Patterson, the daughter of a soldier in the United States regular Army. Her disease was pneumonia, and the sad reflections which are always suggested by the death of the young were made doubly painful in her case by the fact that for several years she had not been inquired for by parent, relative, or friend from outside the institution. Her mind had been sufficiently developed to enable her to appreciate and grasp the comforting truths of religion, and she met death with calmness.

#### DEATH OF DAVID A. HALL, ESQ.

The management of the institution has been called on to suffer in the death of another of its directors.

On the 24th of December, 1870, David A. Hall, esq., one of the founders of the institution, and a member of its first board, rested from his earthly labors.

Near the close of life, the pressure of advancing age had impaired the powers of his once vigorous and brilliant mind; but for a period of ten years he rendered valuable services to the institution. At a meeting of the board, held March 27, 1871, the following resolutions were adopted as expressive of the sentiments of his fellow-directors:

Whereas it has pleased Almighty God to remove from earth our late associate in this board, David A. Hall, esq., after a long life of usefulness: Therefore,

*Resolved*, That we, the surviving members of this board, do sincerely mourn the loss of our friend and fellow-director; and we desire hereby to record our appreciation of his most valuable services in the organization of the institution, and during those early days when its friends were few and its means small.

*Resolved*, That by his punctual attendance on the meetings of the board, even when age and growing infirmities rendered it difficult for him to be present, Mr. Hall has left a record of faithful discharge of duty worthy of the highest commendation.

*Resolved*, That these resolutions be inserted in the next annual report.

#### CHANGES OF OFFICERS.

In December, 1870, Mr. William L. Gallaudet, who had for nearly three years occupied the position of family supervisor, tendered his resignation, and retired from his office at the end of that month.

Mr. Gallaudet's health had been unfavorably affected by the pressure of his duties, and he felt himself unable to continue with us longer, save at the risk of his life. His uniform kindness to those who came under his control had gained him many friends here, and his resignation occasioned much regret.

A portion of the duties of the vacant office have been temporarily devolved upon Mr. Melville Ballard, of our corps of instructors, no permanent appointment having yet been made.

#### THE PRIMARY DEPARTMENT.

The progress of the pupils in this department has been satisfactory. The course of instruction has not differed in any essential particular from that pursued in previous years. A new element of discipline has been introduced, viz., a book of honor, in which are recorded from time to time the names of such as have "preserved for an entire month an unbroken record of faithful performance of duty, whether in school, at work, or in their general deportment." The incentive thus offered of having a permanent record made of each pupil's well-doing has raised the standard of behavior and scholarship during the year in a marked degree.

The increasing cares and duties devolved upon the president, by the growth of the collegiate department, made it desirable that he should be relieved to some extent of the management of the primary department. To this end Mr. James Denison, the senior instructor in this department, who has rendered thirteen years of valuable service to the institution, was appointed principal, to him being committed the duty of arranging the classes and directing the course of study to be pursued.

#### THE COLLEGE.

The progress of this department of the institution has been most gratifying. The students, with but few exceptions, have shown a high appreciation of their unusual privileges, in an advanced standard of scholarship and deportment. The number receiving the benefits of the college has been greater than ever before, every section of the country being now represented except the Pacific coast.

## ILLUSTRATIVE APPARATUS.

A little more than six years ago, Edward Owen, esq., of Washington, presented to the institution a note of the Foundry Methodist Episcopal Church, for \$500. This note has recently been paid, with interest, amounting in all to the sum of \$642. This money has been set apart for the purchase of chemical and philosophical apparatus, the articles purchased to bear the name of the donor, and so perpetuate in the institution the memory of his generosity.

## ASSISTANCE OF POOR STUDENTS.

The liberality of Congress and the benevolence of individuals has enabled the board thus far to render all needed assistance to deaf-mutes who, while they possessed the qualifications fitting them for higher education, lacked the means necessary to meet the expenses thereof.

In March, 1867, Congress provided for the free admission of ten youth into the collegiate department from the States and Territories. In July, 1868, this number was increased to twenty-five, and private subscriptions had furnished the means for the support of some twelve more. This action of Congress was taken by the board as an indication of a purpose on the part of the Government to extend the advantages of the college to the deaf and dumb of all the States. In this expectation, thus excited, they were, however, disappointed by the repeal, in July, 1870, of the provisions of 1867 and 1868; and had there not remained in their hands a considerable balance of funds derived from sources other than the Treasury of the United States, which could be applied to the support of poor students, a very serious embarrassment would have been encountered. This resource will soon be exhausted, and the directors are compelled to ask the attention of Congress to the subject, in the hope that some further legislation may be had which may enable them to hold the doors of the college still open to worthy deaf-mutes from every State.

And by way of explanation, lest misconception should arise as to the number to be thus provided for, it should be here remarked that *the ordinary education of the mass of deaf-mutes in the several States and Territories is amply provided for by local appropriations out of moneys raised by local taxation.* In the year 1870 there were 3,732 pupils under instruction in thirty-four local institutions, supported by State or private beneficence. These children represent a total population of deaf-mutes of all ages in the United States of about 20,000.

We have reason to suppose that, of pupils in the local institutions, not more than one in twenty are proper subjects for collegiate instruction, while a still smaller proportion would be likely to seek to avail themselves of provisions for such a course of study. And when it is borne in mind that admission to the college necessitates a previous graduation from some one of the local institutions, it will be easily understood that its walls cannot be overrun by large numbers for many years to come.

From the best data that can be gathered, the board are of opinion that the number of deaf-mutes in the United States, properly qualified to sustain a college course of study, cannot exceed two hundred at any one time during the next twenty years. They are also of the opinion that the number now in the college, viz., fifty, may be expected to rise to one hundred within the next five years.

They would respectfully urge upon Congress the importance of perfecting the work so nobly begun by extending the advantages of the college to deaf-mutes from the whole country, in a manner that shall do no injustice to any State or section.

And if there be any who object that the collegiate instruction of the deaf and dumb is a work not properly to be devolved upon the Federal Government, it may be replied that Congress has hitherto, by its vast appropriations of public lands for the endowment of agricultural and other colleges, undertaken to accord aid for all time to speaking and hearing youth in the pursuit of higher education; and that from these sources of help so freely given to their more favored brethren, the children of silence are of necessity forever shut out.

#### COMPLETION OF THE MAIN CENTRAL BUILDING.

This building, spoken of in our last report as nearly completed, was finished and fully occupied in January last. The additions to the comfort of the students and pupils afforded by this beautiful gift of the Government are very great.

The edifice faces nearly south, and is so located as to connect the primary department building on the east with the college building on the west. It consists of a main building and two wings. It is 216 feet long, by a width through the main building of 76 feet. The building is faced on all sides with Connecticut brown-stone, interspersed with courses of white Ohio sandstone, and covered with roofs of red and blue slate, laid in patterns and courses.

The main entrance is under a recessed porch, formed by three pointed arches of alternate brown and white sandstone blocks, supported by double sets of dwarf columns of highly polished Scotch granite, with brown-stone bases and carved white sandstone capitals. This porch is paved with white and black marble tiles, and surmounted by an angular pediment containing a carved half-relief figure of the American eagle, with the stars and stripes on the shield over its breast.

From this porch one enters through a small vestibule at either end into the main hall, or chapel, a room 56 feet square and 38 feet high, with a paneled ceiling of light and dark colored wood, with massive brackets, cornice and panel moldings, the walls being frescoed in delicate tints in plain panels. The walls, to about 8 feet from the floor, are protected by a paneled wainscot, painted in strong party colors, with the pulpit, platform and front, and folding-doors to match. The room is lighted by ten large stained-glass windows.

Adjoining on the east, and separated from the chapel by eight sliding doors 15 feet high and 27 feet wide, is the lecture-room. Over the sliding doors is a solid white sandstone arch of 27 feet span, springing from light stone columns with carved capitals. The lecture-room is about 30 by 40 feet in size, with a raised floor; the finish of the ceiling, wainscoting and wall-painting is similar to the chapel.

The remainder of the east wing on this floor is occupied by a large dining-hall, or refectory, for the pupils of the primary department, with its corridors and stairs; and with kitchens, bakery, and store-rooms in the basement below, and large dormitories in the attic above.

The west wing contains a large dining-hall for the students of the college, with its pantries and store-rooms. In the hall of this wing a stairway affords access to the tower. In the basement under this wing is an extensive laundry, steam-drying rooms, and store-rooms, while the basement under the chapel contains the fuel and boiler-rooms, from which the building is supplied with low-pressure steam heat. The wide hall connecting the two wings through the basement has a railway track and small hand-car, to transport the victuals and dishes from the kitchen to the dumb-waiter, for the student's refectory. The building is supplied with gas by pipes from the city.

The designs were made by Messrs. Vaux, Withers & Co., architects, of New York, and were executed under the superintendence of Mr. E. S. Friedrich, of Washington. The general contractor and builder was Mr. James G. Naylor. The cut-stone work was done by M. G. Emery & Bro.; the brick-work by Mr. Wm. J. McCollom; the plumbing and gas-fitting by A. R. Shepherd & Bros.; the slating by Clark & Montgomery; the plastering by Webster Bros.; the painting by Thomas A. Brown; the fresco wall-painting by E. Carstens, and the stained windows by W. Vaughn, all mechanics of Washington.

#### DEDICATION OF THE MAIN CENTRAL BUILDING.

On Sunday afternoon, the 29th of January, dedicatory exercises were held in the hall of the new building, the President of the United States occupying the chair, in his office as patron of the institution.

Hon. James W. Patterson, Senator from New Hampshire, and a member of our board by appointment of the Vice-President of the United States, delivered the following introductory address:

#### SENATOR PATTERSON'S REMARKS.

It devolves upon me, as chairman of the committee of arrangements, to open these proceedings, and I give you all a most cordial welcome in the name of the members of the two Houses of Congress, by whose charity, or rather statesmanship—I may say Christian statesmanship—this building has been founded. When our Saviour was on the earth we are told that on the Sabbath day he went about doing good—healing the sick, opening the deaf ears, unsealing the blind eyes, and giving voice to the dumb. These and kindred institutions are simply the blossoming into fruits of the principles which our Saviour practiced when on earth. There is a singular and a beautiful propriety, therefore, in our being here on this Sabbath day to dedicate this beautiful building to the great work of charity for which it is designed. And it seems to me that nothing can better illustrate the character of our civilization than an institution like this. Now, if we look at the past, if we look to the ruins of ancient civilization which have come down to us, we see temples dedicated to pleasure and to the gods which the imagination of the ages conceived. But the stranger who shall come here in the future to look upon the relics of the past will find not only beautiful buildings, but factories where the poor earn their daily bread, hospitals where the sick are cared for—the ruins of institutions like this, where the deaf and dumb are taught and where the blind have their eyes opened. In all our States we find some of the unfortunates who are educated in this institution, but not enough to justify the establishing a college in any particular State; yet we find enough scattered all through the country to justify the establishment of such an institution at the capital of the nation. And the fact that they exist, that they are the unfortunate children of the republic, makes it a Christian duty incumbent upon us to give them some place where their intellects may be developed, and where they may be brought into practical relations with the great facts of life. The experience of this college, whose whole history is found within the six or eight years I have been in Congress, I think, demonstrates to us the utility of such an institution, as well as our duties as legislators and as a people. Those who have graduated from this institution are now employed in various useful ways—in our departments here; as correspondents for newspapers. Some of them, I understand, are becoming editors of newspapers, and those give their cultured thought and the knowledge they have acquired to the world. And if retirement from the battle of the world, if abstraction from cares, gives concentration of thought and a deeper and purer flow of sentiment, then these deaf people, whose ears God has stopped, may, with these opportunities, become better fitted, possibly, even than others for the education of the human race. They may give us even a deeper phase of abstract thought than those whose minds are distracted with the cares of life.

With these words of introduction, I hand over the further conduct of these exercises to the direction of the president of the institution.

Miss Caroline Mades, a pupil of the institution, then recited the Lord's Prayer in signs. Mr. William L. Hill, a student of the college of the class of '72, recited, orally, the thirty-fifth chapter of Isaiah; after which President Gallaudet delivered the following address:

## ADDRESS OF PRESIDENT GALLAUDET.

MR. PRESIDENT, LADIES, AND GENTLEMEN: A gift of the Government of the United States to its children of silence is now to be dedicated to the work of their education.

In a series of acts, covering a period of thirteen years, Congress has provided, first, for the instruction of the deaf and dumb of the District of Columbia, then for the teaching of those who have fathers in the military or naval service of the country; and, finally, for the collegiate training of the more intellectual deaf-mutes from the States and Territories. The point of beginning in the work of the institution is with minds not only ignorant of the simplest forms of knowledge to be gained from books, but lacking at the same time the power of receiving any impressions whatever through the ordinary channel of communication between man and man. The conclusion of its course finds the graduates grounded in the English, Latin, French, and German languages; in the higher mathematics; in the natural sciences; in mental and moral philosophy, and in political economy.

That deaf-mutes were capable of receiving an education in the lower ranges of study has been fully proved before Congress did aught in this work of benevolence. But it remained for the Government of the American republic to demonstrate that this once neglected and degraded class may rise to the rank of scholars, and strive successfully in the arenas of literature, science, and art.

It would not be difficult to show that the simple proof of this proposition, were the work of our institution to end at this point, is a sufficient equivalent for the outlay involved. The returns, however, which the Government has actually realized from its bounty bestowed through the medium of this institution may be estimated, and the work opening in the immediate future can be made to appear. It would, therefore, seem proper that on this occasion a statement should be made of the amounts which have been set apart from the Treasury of the United States for the benefit of the deaf and dumb, to what uses the funds so appropriated have been devoted, what advantages, if any, have accrued from these expenditures, and what may be looked for hereafter in justification of the liberal action of Congress in this direction. There has been appropriated from the public Treasury since the formation of the institution in 1857 the amount of \$583,352 38. About three-fifths of this sum, or, in exact figures, \$345,767 87, have been expended in the purchase and improvement of grounds and the erection and fitting up of buildings of a substantial character; these constituting permanent investments for the benefit of those who may claim admission to the institution through all coming time.

The remaining \$237,584 51 have been disbursed for the support of the institution—covering the salaries of its officers, professors, and instructors, and the wages of all regular employes; including also provisions, fuel, lights, the clothing of indigent pupils, medical attendance, medicine for the sick, and a large amount of household furniture, besides books and apparatus, and repairs of buildings.

In short, the sum last named expresses the entire outlay of the Government for the current expenses of the institution during a period of fourteen years. Within this time there have been under instruction two hundred and twenty-three pupils and students. Of these, 109 have been absolute beneficiaries of the United States, while for the support of the remainder, 114, more or less assistance has been rendered by their friends or by the States from which they have come. One hundred and fifty-two pupils have been taught in our primary department; these, in almost every instance, coming to us in a condition of mental and moral midnight, the contemplation of which cannot fail to stir the sympathy of every soul not utterly given over to selfishness. And from the darkened minds of these eight-score children has been lifted a cloud heavier than that of heathen ignorance. They have been led "out of the shadow into the sun."

From a condition of dependence and vacancy, wherein might come to them but a feeble understanding of the relations and duties of the high life that now is, and whatever of the glories and joys of that which is to come, they have been raised to a state of self-reliance and action; their minds have been garnished with knowledge; their hands have been taught to labor for their daily bread, and their hearts have been cheered with hopes of immortality. In the advanced department opened in 1864, and designated as the National Deaf-Mute College, seventy-one students have received instruction. They have come to us from every quarter of the land, recommended as youths of special promise, possessing mental qualities which fitted them for labor of a higher order than that which requires only the skillful hand. Nineteen of them, prevented from various causes from pursuing our course of study to its completion, have left us, after having enjoyed the advantages of the college for periods ranging from six months to three years, and are, so far as we have heard from them, sustaining themselves well in the business of life. Three young men of promise have been taken from our midst by death. Nine have graduated with such academic honors as their advancement justified, leaving forty still connected with the college. It may, perhaps, be a sufficient answer to such as ask doubtfully, "Of what use can the graduates of a deaf mute college be in the community?" to state that our nine alumni were called, some of them

before, and others immediately after, their graduation, to positions of responsibility which they could never have hoped to fill but for their college training.

Six have become teachers in various institutions for the deaf and dumb in this country and in Canada. One of these has been made the instructor of a high class, an honor never before accorded to a deaf-mute. Another graduate occupies the position of tutor in our own college, and another is an assistant examiner in the Patent-Office. The amount of compensation which these young men receive in the aggregate is \$9,800, or an average of nearly \$1,100 each, per annum. The exhibition of these facts, though constituting a practical answer to the question just raised, does not give a full response to it. We have good reason to expect that our graduates will be able to render valuable service to society, not only as teachers and clerks, but as chemists, civil engineers, draughtsmen, architects, astronomical observers, translators of foreign publications, editors, authors, librarians, lawyers, and in many other capacities which do not now suggest themselves, but which the perseverance and ingenuity of the deaf-mutes will doubtless discover. The statistics of deaf mutism in our country lead us to expect that the number of students in our college will rise to 150 within the next decade. We may also look for an increase of our primary department to 100 within the same period, and these numbers are not likely thereafter to decrease.

The reflective mind of him whose memory is dear to deaf-mutes as the founder of this institution, and whose absence on this happy occasion is lamented by us all, suggested, but a short time before his death, what might be expected of our graduates, in the following expressive words:

"Silence and seclusion are conducive to study and meditation. In the silence of the night the astronomer can best study the heavens. In the silence of the desert and cave the hermit can best meditate on the vanities of life and the attributes of God. And is it unreasonable to hope that men whose atmosphere through life is silence, may, if allowed the benefit of a superior education, become prominent in all those branches of learning to the acquisition of which silence is conducive? Why may we not expect to find among them our most profound mathematicians and astronomers, our most clear thinkers and chaste writers, our most upright men and devoted Christians?"

We may then expect to send out, each year, as many as forty graduates from both departments of the institution. Did time allow, it would be easy to show that the actual gain to society, in the enhanced value of the services of these youth who are to be educated here, would far surpass the cost of sustaining the means of instruction this institution affords.

The work we are aiming to accomplish is an economical one. For every failure to develop dormant mental power, either in the individual or in the mass, is a loss to the State, absolute and irremediable; subtracting something, be it ever so little in the case of a single member of society, from the possible advance of the body politic in the grand march of civilization.

In the progress of this institution mental powers of a high order, in numbers not inconsiderable, have already been awakened from a sleep scarcely less heavy than that of death itself, to an activity the bounds and results of which no man can measure.

And the work here inaugurated by Congress has but just begun.

Until that day, the coming of which no man can predict, when "the desert shall rejoice and blossom as the rose," "when the ears of the deaf shall be unstopped," and "the tongue of the dumb sing," it is reasonable to suppose that the college for deaf-mutes will have a mission to fulfill.

And when the full measure of all the development of mind and heart which may be here effected shall have been told by Him to whom all secrets are revealed, and set over against the sum of labor and treasure here expended, who will doubt as to the result of the comparison?

As eternity is longer than time, and as mind is stronger than matter, as thought is swifter than the wind, as genius is more potent than gold, so will the results of well-directed labors toward the development of man's higher faculties ever outweigh a thousand-fold any estimate, in the currency of commerce which man can put upon such efforts.

The next exercise was the recitation, in the sign language, by Miss Annie Szymanoskie, a graduate of the institution, of the following poem:

#### SACRED SILENCE.

Never with blasts of trumpets  
And the chariot wheels of fame,  
Do the servants and sons of the Highest  
His oracles proclaim;  
And when graudest truths are uttered,  
And when holiest depths are stirred,  
When our God himself draws nearest,  
The still, small voice is heard.

He has sealed with his own silence  
 His years that come and go,  
 Bringing still their mighty measure  
 Of glory and of woe.  
 Have you heard one note of triumph  
 Proclaim their course begun?  
 One voice of bell give tidings  
 When their ministry was done?

Unheralded and unheeded  
 His revelations come,  
 His prophets before their scorn  
 Stand resolute and dumb!  
 But a thousand years of silence—  
 And the world falls to adore,  
 And kiss the feet of martyrs  
 It crucified before!

Could I have a part in the labor,  
 In the silence and the might  
 Of the plans divine, eternal,  
 That He opens to my sight,  
 In the strength and the inspiration  
 That His crowned and chosen know—  
 Then well might my darkest sorrow  
 Into songs of triumph flow.

I hear in this sacred stillness  
 The fall of angelic feet,  
 I feel white hands on my forehead,  
 With a benediction sweet;  
 No echo of wordly tumult  
 My beautiful vision mars;  
 The silence itself is music,  
 Like the silence of the stars!

The following address was then delivered, in signs, by Mr. Amos G. Draper, a student of the college, of the class of '72, the manuscript being read to the audience by Rev. Dr. Sunderland:

ADDRESS OF AMOS G. DRAPER.

MR. PRESIDENT, LADIES, AND GENTLEMEN: It is said that history constantly repeats itself; but its records may be searched in vain for mention of an occasion like the present. We are met to dedicate the first building ever formally set apart to the uses of a college for deaf-mutes.

Indeed, the attempt to educate mutes at all is a very recent enterprise. Looking back but a century or two, we find the first minds in law, literature and theology, united, for the most part, in rejecting the mute as incapable of receiving any education whatever.

Aristotle, before the refined Athenians, denied to deaf mutes the possession of intellect; and we can hardly avoid the decision that the mistake of so influential a character was a prime cause of the long and cruel proscription which they afterward endured.

But, as John Locke has aptly expressed it, the world learned, at last, that "God did not make man and leave it to Aristotle to make him rational."

The rise and progress of deaf-mute instruction has been like that of those great inventions, which were vehemently cried down at the start, but finally achieved the fullest success; and for the last fifty years the people of all civilized countries have recognized the justice and the policy of providing ample means for its prosecution.

How great the transition from that time, scarcely one century ago, when mutes were unhoping and unhelped-for pariahs of society, to our own day, when the hand of education raises the same class from their mental and spiritual ignorance, trains them up to intelligent manhood and womanhood, and dowers them with the sublime consciousness of their present influence and future immortality.

When we contemplate this great change, with the fact that no people has before undertaken to establish a collegiate institution for deaf-mutes, and that here the endeavor is sanctioned by representatives of national public sentiment, we shall make no unjust claim in saying that we begin a feature of history, rather than repeat one.

And, at seeing gathered here the Chief Magistrate of the nation, Senators, Representatives in Congress, and distinguished ladies and gentlemen from many remote

cities, may not the deaf mutes and their friends feel, without presumption, that the occasion itself, with the favor and honor thus accorded it, is a mark of the advance of the nation in general culture, and indicative of the beneficent results that may be hoped from the development of republican principles?

May we not all fairly congratulate ourselves that America has learned so well that lesson of history which points out a wise fostering of education as one of the surest safe-guards of a people; and rejoice that, whether mind, or person, or conscience is to be liberated, our country is ever vigilant

"To take  
Occasion by the hand, and make  
The bounds of freedom wider yet."

In such a spirit, during a great civil war, when clamorous enemies threatened to besiege the very city in which it was assembled, Congress decreed the establishment of this college, and liberally endowed agricultural schools in every part of the country, relying for its justification upon the intelligence of the people and the after deeds of the youth to be educated.

Does the history of any government reveal a brighter example of unshaken faith in itself and in its citizens? Ought it not to strengthen anew the confidence of all who maintain that "government of the people, by the people and for the people, shall not perish from the earth?"

While, Mr. President, the deaf mutes are thus deeply sensible of what the nation has done and is doing for them, they feel that society is to be no loser thereby. If one from their own ranks may properly speak for them, they ask the people not to overlook the gain, material and moral, which will accrue to society through the education of themselves and those that are to follow them.

A slight investigation will not fail to show that the work is consistent with the severest requirements of policy.

And who can estimate the moral and æsthetic gain? By what rule shall we calculate the reactive influence exerted upon society through the constant rescue of a numerous class from the bondage of an incomplete mental development, and their transmutation into capable, cheerful, Christian men and women?

Would that every one present might have seen the young men of the graduating classes as they came to college and as they left it; might compare the influence which they now exert with that which they might be expected to exert if they had not received the training here given them. Then would few leave this hall without having sorned an inward admission that, though a man's ear be closed to all the concords of sweet sounds, yet may he hearken to the call of duty; though his tongue be speechless forever, yet may his actions breathe of an earnest purpose.

As the deaf-mutes enter upon the enjoyment of this beautiful structure about to be received at your hands, Mr. President, they look forward hopefully to a time when throngs of alumni will revisit its well-remembered precincts, and gain new inspiration for duty from the thousand memories clustering around it; when the work done within it shall be so well known that every citizen, as his eye roams over its traceries, may feel that the United States has done well in enabling its deaf-mutes to labor more effectively among their fellow-men; to bear a more equal part in the never-ending struggle

"Against the wrong that needs resistance,  
For the right that needs assistance,  
For the future in the distance,  
And the good that all can do."

As representing the Senate of the United States, Hon. George F. Edmunds, of Vermont, then delivered the following address:

#### ADDRESS OF SENATOR EDMUNDS.

MR. PRESIDENT, LADIES, AND GENTLEMEN: I am glad of the opportunity of saying for myself, and I think I may safely assume to say for my brother Senators also, a few words of appreciation of the excellency of the work the principal of this institution has performed, and to express the pleasure we all feel, that the beneficence of the Government has not only been so well bestowed, but its design so well executed. We have met to-day to plant another great white milestone in the course of that great empire of industry, of charity, of religion which we are taught to believe, and do believe, is to grow more and more over the earth. And in doing this, the relation of the state to the progress of civilization in works of this character should be clearly borne in mind. They who have read history, from its glimmering and feeble dawn to the present time, cannot have failed to see that wherever Christianity, education, charity, and virtue have been cultivated, there society has made its greatest progress. And in just the same degree that opposite influences have been suffered to grow and to govern, in that same degree everything that marks advance in the course of humanity has waned, and,

indeed, gone backward. And so it is that the highest duty of the state should be to treat as its greatest and truest ally, as its chief agent in its great duty of government, the benign institutions of which this one is a bright example. In every land where the school-house, the church, the asylum, and other kindred agencies of progress exist, and are the most numerous, where their influences predominate, there is the least of human distress, the least of crime, and the greatest sum of happiness in the body of the community at large. And our people, therefore, perhaps more than any other, should cheerfully bear, as the people of this great republic do cheerfully bear, the slight burdens of taxation which they impose upon themselves to these ends; as in every lawful and proper way they help forward, through these influences and these agencies, the great progress of civilization, and make good the outlay a thousand-fold.

These affairs, then, are among the most material of the business of the state. They belong essentially to the theory and practice of a government whose chief end is the greatest good of its people.

And so it is indeed fitting that you, sir, the head of the state, the Chief Magistrate of the republic, the chosen representative of the whole body of that people whose arena of development embraces a continent, should be the official patron of this institution, and that you should, in the name and for the sake of their common brotherhood, dedicate this building to the fair and holy uses for which it was designed. Long may it stand to illustrate and to bless the wise beneficence that founded it and its associate structures! And as industry, education, charity, virtue, and religion are the great and only means of human advancement and human happiness, let us hope that more and more edifices devoted to these and to kindred uses may arise in all our country, and spread from land to land over all the globe, until the morning sunshine, in its constant course round the world, shall everywhere gild with a fresher glory the roofs of industry and of learning, and the spires and domes of Christian churches, and when, in the early morning that is always somewhere "above the awakening continents from shore to shore," the earliest song of birds shall evermore mingle with the chime of holy bells.

To you, my young friends, the pupils and students of the institution for whose benefit primarily this beautiful structure has been erected, although ultimately and chiefly for the benefit of your country which has provided it for you, I wish to say that fidelity to the duties you have to perform here must, and I feel will, be the proof of your deserving the advantages she here bestows upon you; and that, as you sincerely labor, although in silence and seclusion, in the fields of activity the loving Father of us all has chosen for you, you will always find that your "ways are ways of pleasantness," and all your "paths are peace."

As representing the House of Representatives, Hon. James A. Garfield, of Ohio, then delivered the following address:

#### ADDRESS OF HON. JAMES A. GARFIELD.

While one of the young men named on the programme was sending us a message out of his world of silence, by the aid of a translator, I was thinking what I should say.

There were two thoughts in his remarks that struck me as very significant. I will add another and speak of the three in connection.

During the period of our great civil war for the Union, outside of the field of battle three things were done that struck me as most remarkable. One was that the representatives of the American people, and in the name of that people, had such faith in the future of their country, that they devoted the largest sum of money, and the greatest extent of the public domain ever given for any one civil object, to build a great highway from the Atlantic to the Pacific coast, and thus bind together by a material bond the most distant shores of the republic. This act, done at such a time, was sublime.

The second was that while the roar of hostile artillery was echoing within the Executive Mansion, and through the halls of Congress, the representatives of the people, as day by day they ascended the steps of the Capitol, saw those beautiful marble columns rising up, one by one, to perfect the national temple itself. This brave nation, having faith in itself, said, We will build on without fear of dissolution; we will show both friends and enemies that we are here, and mean to stay. That beautiful symbol of national faith and hope deeply impressed me and gave me more faith.

But when, about the same time, I saw the Congress of the United States take almost an empire from the public domain and devote it to the work of education, to the building up, in every State of the Union, of agricultural colleges for the better culture of our laboring people; and then, turning to this spot, when these silent children were making what many regarded as a foolish experiment, the same Congress took half a million of dollars from the public Treasury and devoted it to this work—I hailed it as

a nobler expression of the faith and virtue of the American people, and of the statesmanship of their representatives, than I had ever before witnessed.

And I believe it was. Several gentlemen have spoken of this movement as a work of charity; in my judgment it is a work of very enlightened selfishness on the part of Congress. Mr. President, to you is confided the honor of presiding over the thirty-eight millions of men and women who compose the body of this great republic. The source of all its greatness lies behind the material evidences of its prosperity, lies in the heads and hearts, the brain, the muscle, and the will of the people over whom you preside. Anything, therefore, that affects their welfare, their force, their efficiency, touches the very essence of the national life. It is well known that only that portion of the population between the ages of twenty and sixty is self-supporting. Of these thirty-eight millions, eighteen millions are outside those limits. In other words, eighteen millions of the population over whom you preside must be supported by the other twenty millions. From these twenty millions must be subtracted the infirm, and all those that for any reason are unable to support themselves. Now, the students of this institution represent more than twenty thousand of the population of the United States, most of whom, by the influence of institutions like this, have been lifted up from the lowest plane of intellectual life to the dignity and value of intelligent citizens. Until recently deaf-mutes were not regarded as morally responsible. If they committed murder the law did not hold them responsible. They could not commit a crime. But by the beneficence and wisdom of our people, they have been lifted up to be not only responsible citizens, but they have become valuable members of society.

One of the best things connected with their education is that they have a lively sense of gratitude to the Government for what it has done for them. These young men cannot fail to become good citizens. They cannot fail to be true to their country, when they remember what it has done for them. I say, therefore, it is enlightened selfishness rather than charity to take this class of our fellow-men and make them capable of doing a great work for the country. I am happy to send this message to them to-day into their silence. When I heard one of these young men recite that beautiful chapter from the ancient prophet, and when I remembered that he had been taught mechanically to speak those words, not one sound of which was ringing in his own ears, but whose lofty and inspiring meaning filled his soul, I looked upon it as one of the brightest and noblest triumphs of this institution.

The House of Representatives has been proverbial for its economy in regard to expenses of this kind, but I am happy to say that from the beginning of this work the House has stood up nobly and generously to the support of this institution. And what these students have to-day contributed, and what they are sure to do in the future, will be a most complete vindication of the wisdom of the House, the Senate, and the Executive united in this great work.

Governor Jewell, of Connecticut, then spoke as follows:

#### ADDRESS OF GOVERNOR JEWELL.

MR. PRESIDENT, LADIES, AND GENTLEMEN: I could not if I would, nor would I if I could, undertake to fill the place in these exercises assigned to the Secretary of the Interior; nor would I have violated the promptings of my own judgment when a moment ago I was asked to say a word here. I would have kept silence and not have attempted to light my feeble torch in the presence of these brilliant coruscations of genius, except for the peculiar circumstances in which I am placed.

It is with pride for my State that by mere chance I happen to be here to-day; it is with pride that I am able to say that in Connecticut, that in Hartford, that in the community in which I reside and which I have the honor, in some degree, to represent, was inaugurated, first in this country, an institution for the instruction of the deaf and dumb. If I recollect right, in 1816 Rev. Mr. Gallaudet, whose portrait I now see in this hall, the honored father of the eminent president of this institution, was sent to Europe, the expense of his trip having been provided for by the private subscriptions of benevolent citizens of Hartford; and from this feeble commencement has grown the history of the sign language in this country, now taught in the large number of institutions for the instruction of the deaf and dumb in the various States, and, crowning all, has grown this national institution. I believe Hartford was the first city to undertake this work. I believe Connecticut was the first State to found an institution for the education of its deaf and dumb at the public expense.

I am delighted to hail from a city and from a State which has inaugurated a system which has culminated in this magnificent institution. And in the brilliant future, which is sure to come to this great republic, in its untold millions of men and millions of dollars, may we not expect, have we not the right to expect, that this institution shall be prominent in the galaxy of benevolent and educational institutions which this generation shall have inaugurated?

## DEDICATION BY THE PRESIDENT OF THE UNITED STATES.

At this stage of the proceedings the President of the United States arose and said:

LADIES AND GENTLEMEN: I hereby pronounce to be complete the dedication of this institution to the humane purposes to which it has been assigned by the various acts of Congress making appropriations for its erection and support.

The exercises were closed with prayer and benediction by Rev. Thomas Gallaudet, D. D., rector of St. Ann's church for deaf-mutes, New York.

## EXPENDITURES.

The receipts and disbursements for the year now under review will appear from the following detailed statements:

## I.—SUPPORT OF THE INSTITUTION.

*Receipts.*

|                                                                        |                  |
|------------------------------------------------------------------------|------------------|
| Balance from old account.....                                          | \$4,896 73       |
| Received from Treasury of the United States.....                       | 40,775 00        |
| Received from board and tuition .....                                  | 1,350 00         |

| Received from Treasury of the United States ..... | <u>\$106,087 00</u> |
|---------------------------------------------------|---------------------|

*Disbursements.*

|                                                          |                          |
|----------------------------------------------------------|--------------------------|
| Balance from old account.....                            | \$4,897 19               |
| Paid J. G. Naylor on contracts.....                      | 80,000 00                |
| Paid Vaux, Withers & Co., architects, for services ..... | 2,279 50                 |
| Paid for labor.....                                      | 1,122 67                 |
| Paid for lumber and other building materials.....        | 1,777 45                 |
| Paid for furniture.....                                  | 1,471 27                 |
| Paid for paints and oils.....                            | 124 73                   |
| Paid for iron-work.....                                  | 1,069 03                 |
| Paid for plumbing and gas-fitting.....                   | 1,964 43                 |
| Paid for gas-reflector in hall.....                      | 125 00                   |
| Paid for lightning-rods.....                             | 221 10                   |
| Paid for tin work.....                                   | 450 00                   |
| Paid M. G. Emery & Bro., for extra stone work .....      | 2,204 33                 |
| Balance due the United States from disbursing agent..... | 8,380 30                 |
| <b>Total .....</b>                                       | <b><u>106,087 00</u></b> |

## III.—IMPROVEMENT OF GROUNDS.

*Receipts.*

|                                                       |                   |
|-------------------------------------------------------|-------------------|
| Received from the Treasury of the United States ..... | <u>\$6,000 00</u> |
|-------------------------------------------------------|-------------------|

*Disbursements.*

|                                                          |                        |
|----------------------------------------------------------|------------------------|
| Balance from old account.....                            | \$1,453 41             |
| Paid for labor.....                                      | 736 57                 |
| Paid for grading.....                                    | 930 50                 |
| Paid W. J. McCollam for building terrace wall.....       | 524 62                 |
| Paid for trees, shrubs, and seeds.....                   | 52 89                  |
| Balance due the United States from disbursing agent..... | 2,302 01               |
| <b>Total .....</b>                                       | <b><u>6,000 00</u></b> |

## ESTIMATES FOR NEXT YEAR.

The following estimates of appropriations required for the service of the fiscal year ending June 30, 1873, are respectfully submitted:

For the support of the institution, including \$500 for the purchase of books and illustrative apparatus, \$48,000.

To provide for payments falling due on or after July 1, 1872, on the purchase by the institution of the estate known as Kendall Green, \$70,000.

For continuing the work on the inclosure, improvement and grading of the grounds of the institution, \$6,000.

The following is respectfully submitted for insertion in the deficiency bill:

For furnishing, fitting-up, and repairing the buildings of the institution, \$9,500.

The amount of the first estimate exceeds, by \$7,500, the sum appropriated to similar objects for the current fiscal year. The reasons for this increase will appear by a reference to our thirteenth annual report. On page 16 of that report it will be seen that the amount received from the United States for the support of the institution during the year ending June 30, 1870, was \$45,000.

Our receipts from other sources during that year were such that, at its close, a balance remained unexpended of \$4,895 83. This was applied to the service of the year ending June 30, 1871.

The knowledge of the fact in advance that there would be this balance remaining from the appropriation of the year ending June 30, 1870, led us to submit an estimate of but \$40,775 for the current expenses of last year. This, added to the balance above stated, gives an aggregate of \$45,670 83, which was required to meet the current expenses of the institution during last year, excepting a balance of \$389 40 which remained on hand July 1, 1871.

Hence the apparent increase of our estimate for next year's current expenses over that of last year, of \$7,500, is actually an increase of only \$2,329 17, and this will be needed to meet the additional expense involved by the increase in our numbers, which our experience of the past leads us to expect will take place annually for the next few years.

The second estimate, to pay for land purchased for the use of the institution, is submitted in the belief that Congress, if by its committees or otherwise it will cause an examination to be made into the terms and objects of the purchase of Kendall Green, will not fail to perceive the value of the transaction as being one of great material benefit to the institution and of pecuniary advantage to the Government.

A tract of eighty-one acres of land, the most remote point of which is less than two miles from the Capitol building, together with buildings and other improvements useful to the institution, valued at \$25,000, was secured for the sum of \$85,000. The land, therefore, cost, last year, less than \$800 per acre.

Within the last year, land outside the city limits, a mile east of our premises, has been sold for \$1,600 an acre, cash, and land to the west, also outside the city limits, has been sold at \$2,000 an acre.

Aside from the importance to the institution of possessing and retaining a portion at least of these eighty-one acres, (and in this connection reference is respectfully made to our last annual report, pages 18 and 19,) the purchase of Kendall Green as an investment may be made to inure greatly to the advantage of the Government; for should it be deemed unnecessary to retain permanently the entire tract, portions of it could be sold, within a few years, at prices which would give a rich return for the amount of outlay. And so a fund might be created and invested which would go far toward meeting the current expenses of the institution, thus lessening its demands on the public Treasury.

While this prospective return on the investment made by the purchase of Kendall Green is being waited for, an immediate income of no inconsiderable amount is being received in the form of farm and garden produce, fruit, and wood. At this season an exact report cannot be made of the value of these products for the year 1871, but enough has been already secured to make it certain that materials useful for the support of the institution have been furnished from our own grounds exceeding in value the sum of \$4,000.

In order to meet the payments already due on account of the purchase of Kendall Green, private subscriptions have been solicited in some of our northern cities. The sum of \$8,000 has already been raised, and it is the purpose of the board to provide in this manner for the payment of \$15,000 of the purchase-money and the interest that has accrued or may accrue up to the 1st of July, 1872. There will then remain the exact sum of \$70,000 of indebtedness to be met, and this the estimate is intended to cover.

It is proper to state that the subscriptions already obtained have been

secured with great difficulty, the objection being raised on every hand that private benevolence should not be taxed to assist what is practically a Government institution; and our answer has been that we were compelled to purchase the land when we did or lose the opportunity altogether; and that until the transaction could fairly be laid before Congress, the generosity of individuals must be appealed to, in order that the maturing obligations of the institution should not be dishonored. A list of the subscriptions already paid will be found appended to this report.

A map of our premises, including the Kendall Green purchase, is also submitted with this report.

The amount asked for in the third estimate is needed to complete the inclosure of our premises, for the proper grading and terracing of the grounds immediately around the buildings, and for the completion of our system of sewerage.

The fourth estimate asked to be inserted in the deficiency bill is to provide for certain repairs and improvements within our buildings, the necessity for which was not foreseen when our estimates for the present year were sent in. Certain of these repairs were so necessary that they have been made without waiting for the appropriation. In one instance an expenditure of \$1,200 was inevitable, to replace portions of the heating apparatus in two of our principal buildings, which had burned out by long use, no other means of heating the buildings being available. In another instance it was found that exterior wood-work was suffering and in danger of decay for lack of paint. Furniture and bedding which have been in use for years need to be replaced, and the increase in our numbers, alluded to elsewhere, involves the providing of quite an amount of new furniture.

It is hoped that, in view of these considerations, it may not seem improper that the amount asked for should be appropriated in the deficiency bill.

All of which is respectfully submitted, by order of the board of directors.

E. M. GALLAUDET,  
*President.*

Hon. COLUMBUS DELANO,  
*Secretary of the Interior.*

## APPENDIX.

## REGULATIONS.

I. The academic year is divided into two terms, the first beginning on the twenty-ninth of September, and closing on the twenty-second of December; the second beginning the second of January, and closing the twenty-eighth of June.

II. The vacations are from the twenty-third of December to the third of January, and from the twenty-eighth of June to the twenty-eighth of September.

III. There are holidays at Thanksgiving and at Easter.

IV. The pupils may visit their homes during the regular vacations and at the above-named holidays, but at no other times, unless for some special, urgent reason, and then only by permission of the president.

V. The bills for the maintenance and tuition of pupils supported by their friends must be paid semi-annually, in advance.

VI. The charge for pay pupils is \$150 each per annum. This sum covers all expenses except clothing.

VII. The Government of the United States defrays the expenses of those who reside in the District of Columbia, or whose parents are in the Army or Navy, provided they are unable to pay for their education, and of twenty-five students in the collegiate department.

VIII. It is expected that the friends of the pupils will provide them with clothing, and it is important that upon entering or returning to the institution they should be supplied with a sufficient amount for an entire year. All clothing should be plainly marked with the owner's name.

IX. All letters concerning pupils or application for admission should be addressed to the president.

## OF THE

### GOVERNMENT HOSPITAL FOR THE INSANE.

#### REPORT OF THE BOARD OF VISITORS AND SUPERINTEND- ENT OF CONSTRUCTION.

GOVERNMENT HOSPITAL FOR THE INSANE,  
*St. Elizabeth, D. C., October 31, 1871.*

SIR: By direction of the board of visitors, the undersigned respectfully submit the following report of the operations of the hospital for the year ending June 30, 1871, and of the wants of the institution for the year ending June 30, 1873, as required by section 2 of the act of March 3, 1855.

The number of patients under treatment on the 30th day of June, 1870, was:

|                                      |           |
|--------------------------------------|-----------|
| From the Army, white males.....      | 136       |
| “ “ “ colored “ .....                | 7         |
| “ “ “ white “ (discharged).....      | 79        |
| “ “ “ colored “ .....                | 3         |
| “ “ “ white “ (civilian).....        | 3         |
| “ “ “ colored “ .....                | 1         |
| “ “ “ white females “ .....          | 2         |
|                                      | <hr/> 231 |
| From the Navy, white males.....      | 21        |
| “ “ “ colored “ .....                | 1         |
| “ “ “ white “ (discharged).....      | 2         |
| “ “ “ colored “ .....                | 1         |
|                                      | <hr/> 25  |
|                                      | <hr/> 256 |
| From civil life, white males.....    | 67        |
| “ “ “ “ females .....                | 104       |
|                                      | <hr/> 171 |
| “ “ “ colored males .....            | 10        |
| “ “ “ “ females .....                | 17        |
|                                      | <hr/> 27  |
|                                      | <hr/> 198 |
| Males, 331; females 123; total ..... | <hr/> 454 |

The number of patients admitted during the year ending June 30, 1871, was:

|                                   |           |
|-----------------------------------|-----------|
| From the Army, white males.....   | 44        |
| “ “ “ colored “ .....             | 1         |
| “ “ “ white “ (discharged) .....  | 51        |
| “ “ “ “ female.....               | 1         |
|                                   | <hr/> 97  |
| From the Navy, white males.....   | 12        |
|                                   | <hr/> 109 |
| From civil life, white males..... | 41        |
| “ “ “ “ females.....              | 28        |
|                                   | <hr/> 69  |

# 1154 REPORT OF THE SECRETARY OF THE INTERIOR.

|                                      |           |            |
|--------------------------------------|-----------|------------|
| From civil life, colored males ..... | 11        |            |
| " " " " females .....                | 5         |            |
|                                      | <u>16</u> | 85         |
| Males, 160; females, 34; total ..... |           | <u>194</u> |

Two persons were re-admitted in the course of the year; consequently there were two less persons than cases under treatment.

The whole number of patients under treatment in the course of the year 1870-'71, was:

|                                       |            |            |
|---------------------------------------|------------|------------|
| From the Army, white males .....      | 180        |            |
| " " " colored " .....                 | 8          |            |
| " " " white " (discharged) .....      | 130        |            |
| " " " colored " .....                 | 3          |            |
| " " " white " (civilian) .....        | 3          |            |
| " " " colored " .....                 | 1          |            |
| " " " white females " .....           | 3          |            |
|                                       | <u>328</u> |            |
| From the Navy, white males .....      | 33         |            |
| " " " colored " .....                 | 1          |            |
| " " " white " (discharged) .....      | 2          |            |
| " " " colored " .....                 | 1          |            |
|                                       | <u>37</u>  | 365        |
| From civil life, white males .....    | 108        |            |
| " " " " females .....                 | 132        |            |
|                                       | <u>240</u> |            |
| " " " colored males .....             | 21         |            |
| " " " " females .....                 | 22         |            |
|                                       | <u>43</u>  | 283        |
| Males, 491; females, 157; total ..... |            | <u>648</u> |

The number of patients discharged in the course of the year, was:

|                                                           |           |    |
|-----------------------------------------------------------|-----------|----|
| Recovered, from the Army, white males .....               | 22        |    |
| " " " " colored " .....                                   | 1         |    |
| " " " " white " (discharged) .....                        | 5         |    |
|                                                           | <u>28</u> |    |
| Recovered, from the Navy, white males .....               | 2         |    |
|                                                           | <u>30</u> |    |
| Recovered, from civil life, white males .....             | 18        |    |
| " " " " " females .....                                   | 11        |    |
|                                                           | <u>29</u> |    |
| " " " " colored males .....                               | 3         |    |
| " " " " " female .....                                    | 1         |    |
|                                                           | <u>4</u>  |    |
|                                                           | <u>33</u> | 63 |

The resident officers of the hospital, who have from hour to hour and day to day, through another year, performed the unremitting mental labor and felt the unceasing responsibilities of the care and treatment of 648 insane persons, embracing a very wide range of intellectual and moral culture, of social position, and of official rank, and exhibiting every form of morbid mental manifestation, every troublesome and dangerous propensity, and every physical complication, feel profoundly grateful for the general prosperity which has attended the operations of the institution. The average population of the hospital and the proportion of troublesome cases have considerably exceeded those of any previous year of its history. There have never been so large a number nor so large a proportion to the whole number of homicidal and suicidal cases, the two classes of the insane that give those intrusted with their care the deepest anxiety. Several desperate homicidal and suicidal attempts have been made, but none of the first were in any degree successful, and but one of the last, and in his case the suicidal act was the first manifestation of the suicidal disposition. It is undoubtedly true that some increase of the causes of insanity—the wider prevalence of intemperance, and a more general thirst for wealth and notoriety—is one of the legacies of our gigantic civil war; and there is little doubt that the character of the mental manifestations of the insane since the war has been materially determined by the familiarity of the public mind, acquired during that struggle, with the violence and spirit of violence which necessarily attend all warfare.

This seems to be a fit occasion for the board of visitors and resident officers to record their high appreciation of the frequent and marked expressions they have received from time to time, in previous years as well as in the one that has just passed, both from the medical profession and people generally of the country, of their confidence in the management of the hospital and of their approbation of the result of an earnest and persevering effort to establish and conduct at the national capital an institution that should present an advance representation of the science, humanity, and patriotism displayed by the American people in their provisions for the care of the insane, particularly of the dependent classes, and for the medical and moral treatment of mental disease. The directors of the institution have derived special encouragement from the generous approval of its provisions and management which has been expressed by the medical profession of the District of Columbia, and by the medical officers of the sister institutions for the insane in the country—by one class of men that is best acquainted with the history

and character of the hospital, and by another which, by its studies and experience, is best qualified to judge of the merits of such establishments.

The general health of the resident population of the hospital has been excellent. It is true that the mortality among the patients was larger than the year before, partly on account of a number of cases of maniacal exhaustion dying within a few days of their admission, and partly on account of the *holding over* of a number of feeble old people, whose "sands of life" had nearly run out the year before. The *rate* of mortality was less than seven per cent. of the whole number of cases under care, which is really low in view of the fact that a large proportion of the inmates of the institution are chronic cases that, with rare exceptions, remain here until they terminate in death. The officers of the national hospital rarely experience the great relief which attends the removal of a feeble, declining patient by his friends, in order that he may be nursed by them in the last days of his life, and finally die at home. Of course, such removal is impracticable in the case of patients belonging to distant States, and some have no known friends, but we have sometimes wondered that so few of the friends of District patients have been disposed to take them home and minister to them in their last hours, and, when they have died, bury their remains in their own way, in grounds of their own choice.

The *admissions*, in the course of the year, were 194, and the whole number under treatment was 648, showing the increase in the population of the hospital that has been anticipated by adequate provision for their support. In the year ending June 30, 1870, there were 180 admissions, and a total of 549 under care. The rule that the crowded condition of the house made it necessary to adopt several years ago, of admitting only such patients as the law requires, has been observed during the last year.

The *recoveries* were 63, and besides those that appeared to have been fully restored to reason, 24 were removed by friends in such an improved condition as to be able to reside at home. Nine only, fewer than usual, were removed in an unimproved condition, either to reside at home with relatives, or near the latter in the institutions of their respective States. The ratio of recoveries to discharges, including deaths, was 45 per cent.; to discharges exclusive of deaths, 66 per cent.

The *extension* of the hospital, authorized by an appropriation made at the second session of the last Congress, is now substantially completed and occupied. It was intended to accommodate 100 patients in the three principal stories, and in the basement story to afford lodging-rooms and a hall for single resident mechanics and farm hands, and tailoring and shoemaking shops and store-rooms. In the crowded state of the house, it at once became necessary to test the *maximum* capacity of the new building, and we find that its three wards will afford comfortable and healthful accommodations for 129 patients of the quiet chronic class. The dining and attendants' rooms are taken from the old building at its connection with the new, and the food for the occupants of the new building is cooked in the old, and their washing is done in the common laundry, and the gas made in the common generator of the establishment. An inspection of the basement story of the extension, with its furniture and fitting up, will convince any practical person that in extent and cost it is equivalent to all the room and accommodations the new building derives from the old. It may be fairly assumed, then, that the cost of the extension, including furnishing and fitting-up complete, embraces all the material provisions that are required, except

land and officers' quarters, for the proper care of 129 patients of the quiet chronic, dependent class, at a cost of \$59,482, (the amount of the appropriation for the building and the entire cost of it ready for occupation,) or of \$461 10 per patient. We earnestly invite public authorities, whose duty it is to provide new or extend existing provisions for the care of the chronic insane of the dependent classes, to visit the extension just completed here for that purpose, and closely inspect its construction, furniture, and fitting-up, including lighting and heating, and see for themselves what they really are. We confidently claim that they are superior, architecturally and mechanically, and in all special arrangements for the safety, health, and comfort of the class of patients they provide for, and that they present an effectual answer to the plea that the enlargement of existing regularly organized hospitals cannot be afforded, and there is no alternative but to consign the chronic insane, as they are discharged from the State institutions to make room for recent cases, to those dens of brutality and suffering that most of the alms-house receptacles are, as shown by abundant official testimony more interested in concealing their defects than in exaggerating them. We have felt deeply interested in ascertaining for ourselves, and in showing to others, what hospital extensions for chronic cases must necessarily cost, and have certainly made every exertion in our power to erect this building and fit it up at the lowest cost. It is the general impression that labor and building materials are as high in the District as in any part of the country. This may not be strictly true. There may be situations, especially in some of the new States, remote from great markets and without means of cheap transportation, where building, and especially the fitting-up of buildings, is more costly than it is here. Making all due allowances for difference in prices of materials and labor in the different States, we think it may be safely asserted that \$600 per patient is all that hospital extensions for the chronic insane, embracing every requirement of science and Christian philanthropy, ought anywhere to cost; and at that rate of cost, every State is certainly able to make ample provision for the most afflicted and most dependent of all its children, and is without adequate excuse if it continues to neglect the duty. If one or more additional institutions for the insane are required in a large State, to afford districts remote from existing institutions available accommodations for their recent cases, that is a question quite independent of the cost of special provisions for chronic cases, which will be the same whether made in connection with new or old establishments. In concluding this important subject, now so urgently pressed upon the attention of philanthropic men and women, and upon the public authorities of the whole country, we may remark that it is manifest to us that the current expenses of the proper care and treatment of the chronic poor insane must be less under the charge of a regularly organized institution for both new and old cases, than it can possibly be in separate institutions with a competent organization maintained for the latter alone.

The large number of determinedly homicidal and suicidal cases has been mentioned as one of the specialties of the year's experience. Another somewhat peculiar experience of the year was the unusual number and the troublesome character of that class of patients, the marked characteristic of whose ante-hospital history was the intemperate use of intoxicating drinks. Except those that are penal in their character, this is the only institution in the District that is authorized to keep its inmates in custody against their will, and the only one that can afford more

than the most temporary relief in cases of inebriety, unless it be coupled with a criminal charge. Under the circumstances, it will not be strange if the most respectable physicians of the District should sometimes seem to strain a point in granting certificates of insanity in these cases; and the same motives that may have led physicians to give some inebriates the "benefit of a doubt," have induced us to abstain from everything like hypercriticism in distinguishing between temporary mental disturbances from drink, and that more prolonged and deeper mental alienation called insanity. But how far soever a disposition to relieve the distress of families, and to endeavor to restore an unfortunate man or woman to self-control, and usefulness, and happiness, may have carried us in the direction indicated, in a few cases, it is our strong conviction, as it is the often reiterated opinion of all those who have had an experience similar to ours, that simple inebriates should not be restrained in the same building, much less in the same wards, with ordinary lunatics, and that while cases of real insanity, that are chiefly characterized by a frequent or total abandonment to extreme indulgence in intoxicating drinks, regardless of the most sacred claims and pledges, and by more or less impairment of the moral and intellectual faculties, should, in common with all other forms of mental disease, whatever be their complications, be restrained and treated in hospitals or asylums for the insane, they should, like epileptics, occupy separate wards by themselves. The insane and inebriates disdain each other's company. Each feels degraded by association with the other. However obvious it may be to others that the thinnest partition separates the inebriate from downright insanity, he rarely exhibits any sympathy for the insane, but, on the contrary, he is prone to play upon their delusions and mental weaknesses, and to harass them in every way. Skilled in deception by long practice, and devoted to self-indulgence, the inebriate, in spite of the interposition of authority and the vigilance of attendants, almost always drives the lunatic to the wall, and secures all the little prizes of their associated life. It will be rightly inferred that we regard the care of inebriates in this hospital as a perversion of the express objects of its establishment and maintenance, and in a subsequent part of this report we shall show that the existing hospital edifices are inadequate to accommodate the insane now under care, much more to accommodate the prospective increase in number. It should not be inferred, however, that either as a board or as individuals we are indifferent to the very urgent need there is of a provision for the restraint and reformation of the inebriates of this District, and we suggest to the benevolent gentlemen who have recently conferred with us upon the subject, as the readiest, least expensive, and altogether most feasible way in which the inebriates of the District can receive the benefits of restraint and treatment, that Congress be asked to pass an act authorizing the sending of them to one or more of the existing public institutions for that class of persons, the selection of the institutions in which they may be placed to be made by the Secretary of the Interior, and to make a small appropriation for the maintenance of those who are unable to defray their own expenses. As the management of inebriate asylums, and their success in reforming persons addicted to drink, must still be regarded as in the stage of experiment, the course recommended may be thought more prudent than an immediate attempt to incur all the expense of establishing an institution in this District. The boarding by the Government of prisoners and poor blind children, and formerly of the insane of the District, in appropriate State institutions, affords ample precedent for a like course in the case of inebriates.

The expenditures and receipts in the year were as follows:

## EXPENDITURES.

The above list of expenditures embraces all that was paid out or engaged to be paid out for the support of the hospital during the year. Though the average number of patients was considerably larger, the expenditures were but slightly in excess of those of the previous year. This is accounted for principally by the fewer and less expensive repairs and improvements that became necessary in the course of last year, by the greater productiveness of the farms and gardens and somewhat diminished cost of cultivation, and by the saving of the wages of the farm and garden hands and the cost of feed consumed by the farm teams, while they were used in excavating for the foundations and hauling the materials of the new building.

The repairs executed in the past year were such as became immediately necessary on account of ordinary decay and wear, and the damages of patients. They were somewhat less than usual. The principal improvements of the year are of the most permanent character. They consist of the building of several heavy stone walls across ravines, to prevent gullyng and landslides in wet seasons; the resurveying and plotting of the Shepherd farm, and the setting of fourteen granite and freestone monuments in its boundary lines; the making of farm roads and

building of one substantial stone bridge; the continuation of the clearing, grading, and underdraining of the agricultural lands, and the introduction of a set of eccentric washing-machines, and an additional mangle into the laundry. The latter are not intended to wholly displace the old shaker machines and mangle, which are thought to be worth repairing for future use, but are introduced in pursuance of a plan of gradually duplicating the steam, gas, water-supply, laundry, cooking, and all other apparatuses whose hourly use, or instant readiness for use, is necessary to the safety of the property of the institution, and to the health and comfort of its helpless inmates. We regard the plan of which we speak as an economical as well as prudential measure. If we have two machines of a kind, the use of one can be suspended for timely repairs, and much injury often prevented.

The expenditures for the extension of the hospital have been kept slightly within the appropriation.

An unexpended appropriation for a coal-house has lapsed into the Treasury, and but a small portion of an appropriation for erection and repairs of cottages for the families of employes can be used under the restrictions of the appropriation act for the year ending June 30, 1871.

The following is a statement of the quantities and estimated values of the products of the farm and garden which were consumed in the house. Large quantities of apples, pears, peaches, and cherries, gathered from the trees by the patients, and eaten on their walks, were not reported at the store-room, and are not included in this statement:

|                                                          |          |

| Total .....                                | <u>10, 186 12</u> |

In addition to the fresh beef and pork credited to the farm, 49,079 pounds of beef, and 13,134 pounds of pork, purchased on the hoof and kept for a short time only, were slaughtered at the hospital.

To show their respective quantities and values, we add a few of the other larger productions of the farm last year which are not included in the preceding list, because they were consumed by the stock, whose annual value is credited to the farm and garden in other forms.

|                                                |                  |
|------------------------------------------------|------------------|
| Hay, 175 tons, at \$20 .....                   | \$3, 500 00      |
| Oats in straw, 50 tons, at \$20 .....          | 1, 000 00        |
| Rye, 65 bushels, at \$1 50 .....               | 97 50            |
| Mangel-wurzel, 188 bushels, at 62½ cents ..... | 117 50           |
| Total .....                                    | <u>4, 715 00</u> |

The live-stock, farm and garden implements, stable furniture, and other personal property, mostly used for agricultural purposes, on hand on the 30th June, 1871, and their estimated cash values, were as follows:

## LIVE-STOCK.

### Neat stock.

|                                                 |                    |
|-------------------------------------------------|--------------------|

## FARM AND GARDEN IMPLEMENTS.

|                                            |          |
|--------------------------------------------|----------|
| 2 mowing-machines, at \$65.....            | \$130 00 |
| 1 mower, (lawn) .....                      | 15 00    |
| 1 horse-rake .....                         | 25 00    |
| 6 hand-rakes, (wood,) at 37½ cents .....   | 2 25     |
| 3 hand-rakes, (iron,) at 50 cents.....     | 1 50     |
| 14 plows, at \$6 .....                     | 84 00    |
| 2 plows, (sulky,) at \$40 .....            | 80 00    |
| 6 cultivators, at \$6 .....                | 36 00    |
| 5 harrows, at \$7 .....                    | 35 00    |
| 2 rollers, at \$310 and at \$15 .....      | 325 00   |
| 1 roller, (stone) .....                    | 25 00    |
| 1 harrow, (pulverizing) .....              | 25 00    |
| 8 wheelbarrows, at \$3 .....               | 24 00    |
| 2 scrapers, (road,) at \$3 50.....         | 7 00     |
| 2 augurs, at \$1 .....                     | 2 00     |
| 2 hammers, (stone), at \$1 .....           | 2 00     |
| 3 axes, at \$1 .....                       | 3 00     |
| 1 saw, (cross-cut) .....                   | 5 00     |
| 2 pulley blocks, (heavy iron,) at \$5..... | 10 00    |
| 2 pulley blocks, (wood,) at \$1 50 .....   | 3 00     |
| 1 grapple .....                            | 2 00     |
| 1 chain, (long) .....                      | 15 00    |
| 3 scythes and snaths, at \$1 50.....       | 4 50     |
| 7 picks, at \$1 .....                      | 7 00     |
| 4 grub-axes, at 50 cents.....              | 2 00     |
| 20 shovels and spades, at \$1 .....        | 20 00    |
| 18 hoes, at 50 cents .....                 | 9 00     |
| 24 forks, at 75 cents .....                | 18 00    |
| 1 maul, (paving) .....                     | 1 00     |
| 1 hatchet .....                            | 1 00     |
| 1 hammer, (sledge) .....                   | 1 50     |
| 3 boats, at \$115 .....                    | 345 00   |

*Estimates of appropriations required to support the hospital during the fiscal year ending June 30, 1873, for a further extension of the hospital, and for executing sundry economical and sanitary improvements.*

Several acts of Congress make it obligatory upon the institution to extend "the most humane care and enlightened curative treatment" to the insane of the Army and Navy, of the revenue cutter service, and of the late volunteer service both of the Army and Navy, and to the indigent insane of the District of Columbia. At the close of the year ending June 30, 1871, there were in the hospital 52 more patients of the classes supported by the Government than at the beginning of that year. If the excess of admissions over discharges and deaths continues the same, the average number of all these dependent classes during the year 1872-73 will be 560. Basing its estimate upon past experience and what it considers the probabilities of the future, the board of visitors is of the opinion that the average number of Army and Navy, and other

insane persons which the Government will be required by existing laws to support during the year ending June 30, 1873, will not be less than 555. On account of the increased and increasing productiveness of the farms and gardens, the board has concluded that the cost in money of the support and treatment of the Government patients may be reduced from 68½ cents, the basis of the last and several previous years' estimates, to 64½ cents per diem. At the latter rate, the whole cost of the support of 555 patients for the year will be \$129,870. For this purpose, the board respectfully asks for \$130,500, a round sum which is only \$130 in excess of the net estimate, exclusive of \$500 for books, stationery, and incidental expenses. It will be seen that the estimated per diem cost of supporting each patient is a close one, when it is borne in mind that the salaries of the officers, attendants, and all other employes of the institution, and every expense of the board, clothing, nursing, and medicines, and of the hygienic, medical, and moral treatment of all the inmates of the hospital supported by the Government, are paid out of the appropriation for that purpose.

Four hundred and fifty patients is the maximum number that the hospital edifices, including the recent extension, can properly accommodate. There are at the time of preparing these estimates, October 1, 1871, 518 patients of all classes under treatment in the institution, or 63 more than there is entirely satisfactory room for. When it is considered that, in addition to the present redundant population of the institution, the number of inmates under treatment at one time is increasing at the rate of about 50 per annum, the necessity of further increasing the accommodations of the hospital will be obvious. The recent extension was designed and built for the care of quiet chronic cases, and the provisions for the excited and most troublesome classes are still only those embraced in the original design, while the demand for such provisions has increased in full proportion to the increase of the whole number of inmates. It is therefore proposed to extend the excited wards in a manner that will harmonize with the original building, and by restoring the proper classification of the patients, relieve the quiet and convalescent classes from a discomforting and detrimental association with the violent and noisy. The accompanying plan of the proposed extension shows that it will have a corridor connection with the western section of the west wing of the original edifice, which is two stories, and was built upon an elevated foundation to bring the first story on a level with the site of the center building, and an embankment thrown about it. This extension will be three stories high. The first or basement story will be entirely above ground, and have a rustic exterior like the extension just finished, with an interior finish corresponding with the other stories; and the second and third stories will have the same elevation as the first and third of the old building. It is proposed to give this building, in construction and details of lighting, heating, ventilation, food-supply, and inspection, the most perfect adaptation in our power to the custody and treatment of the excited classes of the insane—the most difficult classes to care for safely and comfortably, and the most important, because they often embrace the recent and curable cases in the most critical stages of their disorder. It is estimated that a building, on the plan presented, properly constructed and fitted up for the excited classes, of sufficient size to accommodate 18 patients on a floor, or 54 in all, will cost \$37,800.

The heating-boilers in the west and first-erected wing have been in use since the house was opened in 1855, and are very nearly worn out, and as they are liable to give out altogether at any time, we think it

would be unsafe to attempt to use them beyond the approaching winter. When renewed, their capacity should be considerably increased, in order to be entirely adequate to heat the recent extension, and that now proposed. The estimated cost of four such boilers as are needed, including connections and setting, is \$6,000.

The tract of land, containing about 150 acres, last purchased by the Government for the use of the hospital, is used, with great economical advantage to the institution, for grazing milch-cows and bees, and for raising hay, corn, and roots. As there is not a barn or a shed on the place worthy of the name, it seems obvious that a good, substantial barn is an economical necessity, both to shelter the stock in inclement weather and store their forage.

The earlier purchase of 56½ acres is a detached piece of land, a mile away from the site of the hospital; its soil is well adapted to the growth of the cultivated grasses, and it is devoted to raising hay for the stock of the establishment. It is proposed to build upon this tract a plain, substantial *hay-barn*, for the storage of the hay at the time it is cut, and for its preservation in good condition until it is required for consumption by the stock.

Large quantities of poultry-meat and of eggs are required in a hospital of this character and magnitude; and the experience of the institution shows that, by having a proper poultry house and yards near running water, poultry-raising can be made of considerable economical advantage, and also afford a light employment, in which numbers of patients will take an active and useful interest. The estimated cost of these three improvements, which, as they are similar in character, are classed together, is \$9,000. It is obvious that the sum asked will only be sufficient to erect and fit up plain wood structures on stone foundations, and that is all that is contemplated. It is intended that they shall be convenient and durable, and respectable in appearance.

About five miles of roads and walks have been laid off in the park and other exercise grounds of the patients, and the attempt has been made to drain, grade, and gravel them with the ordinary farm force during the winter, but the farm and garden hands and teams having been needed and occupied in underdraining and improving the farms and gardens as such, but little has been accomplished in road and walk making; and, when not engaged in raising the annual crops, the farm force will all be needed for farm improvements for several years to come. The completion of the roads and walks intended for the patients to exercise and obtain recreation in, is also needed to enable the hospital to fully accomplish the great objects of its construction and maintenance. If the sum of \$2,000 should be judiciously expended on the roads and walks, they could then be kept in order, and perhaps further improved from time to time, by the regular farm hands. The board therefore respectfully ask for \$2,000 for this purpose.

The chaplains of the institution have been earnest and attentive in the discharge of their duties, and have been at evident pains to adapt the character of their addresses, and the manner of performing their services, to the intellectual and moral capacities and peculiar susceptibilities of the inmates of the establishment.

Dr. Eastman and Dr. Franklin have now been connected with the hospital, one nearly seven and the other about six years; and it affords us pleasure to again bear testimony to the unabating zeal and fidelity, and to the skill and efficiency, increasing with experience, with which they have continued to discharge their delicate and responsible duties.

The vacancy in the position of assistant physician, occasioned by the

resignation of Dr. W. W. Godding, to take charge of the Massachusetts State Lunatic Hospital, at Taunton, and still existing at the date of our last report, has since been filled by the appointment, as third assistant physician, of Dr. Warren G. Hutchins, a graduate both of the academical and medical departments of Dartmouth College. Dr. Hutchins has now been on duty for several months, and has thus far fully justified the high testimonials upon which he was appointed.

The capacity of Miss Bennett, the housekeeper of the hospital, has steadily risen with the increasing demands upon it, and her devotion to the interests of the institution is untiring.

We desire to express a sense of personal obligation, not only to the officers whose names we have mentioned, but to the attendants and all others who have contributed to the welfare of the patients, and to the usefulness and good name of the hospital.

We have the honor to be, sir, very respectfully, your obedient servants,

W. GUNTON,

*President of the Board.*

C. H. NICHOLS,

*Superintendent, and ex-officio Secretary of the Board.*

HON. COLUMBUS DELANO,

*Secretary of the Interior.*

# REPORT

## OF THE

# COLUMBIA HOSPITAL FOR WOMEN.

WASHINGTON, D. C., *October 24, 1871.*

SIR: I have the honor to transmit herewith the report of the surgeon-in-chief of the Columbia Hospital for Women. I concur in his estimates for appropriations and respectfully recommend their passage. The institution is undoubtedly, in my view, of great public importance, and even a necessity, affording efficient and timely aid to a class greatly exposed to suffering and want, for whom there is no other provision. It has, moreover, a sort of national bearing from its location in the capital, and, as a reference to the statistics of the report will show, must be a relief to the private resources of representatives from the various States, whose charity would be appealed to for aid in a much less efficient form, were it not for the maintenance of this hospital and dispensary.

I beg leave to add that these remarks are dictated by the experience of frequent personal inspections of the building, and questioning of its beneficiaries, by myself.

I have the honor to be, sir, very respectfully, your obedient servant,

E. D. TOWNSEND,  
*President Board of Directors.*

The Hon. SECRETARY OF THE INTERIOR,  
*City of Washington.*

WASHINGTON, D. C., *October 20, 1871.*

SIR: I have the honor to submit herewith the sixth annual report of Columbia Hospital for Women and Lying-in Asylum:

|                                                                         |              |
|-------------------------------------------------------------------------|--------------|
| Number of patients admitted for treatment during the year has been..... | 245          |
| Of these 38 were pay patients, and 207 were free patients.              |              |
| Number of out-door patients admitted for treatment .....                | 2,011        |
| Total .....                                                             | <u>2,256</u> |

|                                                |              |
|------------------------------------------------|--------------|
| Number discharged cured .....                  | 1,625        |
| Number discharged relieved .....               | 307          |
| Number died .....                              | 18           |
| Number sent to Insane Asylum.....              | 2            |
| Number at present in hospital.....             | 19           |
| Number out-door patients under treatment ..... | 285          |
|                                                | <u>2,256</u> |

Total number of prescriptions compounded during the year..... 5,798

The different States were represented as follows :

|                     |     |                            |     |
|---------------------|-----|----------------------------|-----|

I would most respectfully suggest that the sum of \$18,300 be asked for the support of the hospital for the ensuing fiscal year, and \$5,000 for the rent and necessary repairs to the building.

In making this estimate I have calculated upon the receipt of \$5,000 from the District government, in accordance with a bill recently introduced in the District legislature, making an appropriation of that amount to cover the expenses incurred in the support of those patients properly belonging to the District, and who are not chargeable upon the General Government.

I would again earnestly recommend the purchase by the Government of the building and grounds now occupied by the hospital. The position is all that could be desired, the price asked far below its market value, and the building so constructed that with a moderate outlay it can be made to accommodate one hundred patients.

The entire amount for completing the purchase and making the alterations would be \$30,000.

I have the honor to be, very respectfully, your obedient servant,  
J. H. THOMPSON, M. D.,  
*Surgeon-in-Chief.*

Major General E. D. TOWNSEND, *President.*

# REPORT OF THE BOARD OF TRUSTEES OF THE REFORM SCHOOL OF THE DISTRICT OF COLUMBIA.

---

WASHINGTON, *October 9, 1871.*

SIR: On behalf of the board of trustees of the Reform School of the District of Columbia, I have the honor to present our second annual report.

It is gratifying to be able to report that the institution has more than fulfilled the expectations of its friends, notwithstanding it has been carried on under great embarrassments during the past year.

At the date of our report last year there were forty-six boys in the school; but before the close of the month of January the number had risen to over sixty, and if we had had accommodations for them the number would probably have reached a hundred, or more; sixty, however, is all we have accommodations for, though there have been sixty-five in the school at one and the same time. To make room for those crowded upon us by the courts, the board were under the necessity of discharging others from the school who had been greatly improved, but who ought, in justice to the school, to have remained much longer.

A considerable number of Senators and members of Congress were invited to visit the school, and gratified us not only in accepting our invitation, but by addressing the boys, and expressing their great satisfaction with the general appearance, orderly deportment, and performances of the boys. They were invited to examine the dormitories, kitchen, dining-room, and play-grounds, with all of which much gratification was expressed.

Shortly after this the President of the United States, and other Senators, members of Congress, and a few citizens honored us by visiting the school, witnessing the recitations, and the impromptu examinations of the boys in geography, and other studies during the week. The surprise and pleasure expressed by many of these gentlemen at the readiness and correctness of the answers given to the questions put—questions by no means anticipated—and also at their tidy appearance, quiet behaviour, and pleasant singing—was very gratifying to the superintendent and the board.

It was our wish that every member of Congress should visit the school, that they might judge for themselves of its usefulness, and the efficiency of the system we have adopted for transforming incorrigible, badly brought up boys, into useful men. And we now express the earnest hope that every Senator and member will, during the approaching session of Congress, visit the school, witness the improvements there effected, and the operation of the system.

There is in this, as in every other city in the United States, a large number of boys whose only home is the streets, whose dormitory is the market-house, a stable, an out-house, or sometimes the lee-side of a

wall, or door-step; and others who have parents, but might better, perhaps, be orphans; who, growing up familiar with vice and crime, in which they soon become adepts, should be rescued from the paths that lead down to destruction, and placed as soon as possible under moral and Christian influences, where they can be made happy members of a family, and learn the value of a home.

The greater portion of those who become inmates of the Reform School have never known what a home is; scarcely, indeed, what the word means; if they have, or have had parents, they have never felt the sweet influences of parental care and love, but have been driven and weaned from them by brutal treatment. Need we wonder they wander from what should be their home into the street to seek for such comfort as it may afford, or at least to escape from blows and buffets? In nine cases out of ten, the faults and crimes of the boy have their origin in the greater faults and crimes of the parents, who, instead of governing in love or affection, only abuse their children in wrath and drunkenness. It is this class of children who supply recruits to "the grand army" of thieves, pickpockets, burglars, robbers, and rogues of every kind who war upon the community, and send representatives to our jails, penitentiaries, State prisons, and gallows.

The purpose of the Reform School is to lessen, if we cannot entirely cut off, the supply of these recruits. In the same proportion as the prevention of sickness, or evil of any kind, is better than cure, is the importance of preventing the increase, or lessening the number of those who would become criminals. Our plan is to place boys convicted of vagrancy or petty crimes, not in a jail among hardened experts in crime, where they may become proficient, after having had the stigma fixed upon them of being criminals, but to surround them at once with an atmosphere of kindness and affection, to inspire them with self-respect, make them conscious that they are the children of God, that they have souls to save, and duties to perform as human beings; and that they may become respectable and respected men.

Many of these boys are totally ignorant of the existence of a Deity, and only know the name of our Saviour as a word of profanity. Of right and wrong, or conscience, they have scarcely the faintest idea. In stealing, therefore, or committing any other crime for the purpose of supplying themselves with food and clothing, they but follow their animal instincts. True, they know they may be punished, if detected, but they have no conscience to tell them they have done wrong, for they have never been taught moral responsibility; all they fear is punishment, and they have but little apprehension of that.

#### NUMBER OF BOYS IN THE SCHOOL DURING THE YEAR.

It will be seen by the report of the superintendent that we have had in the school during the past year, one hundred and four boys; thirty-eight having been discharged, some by reason of the expiration of the terms for which they were sent to the school, nine to make room for other boys sent to the institution by the courts, and two only as fully reformed.

Many have been sent to the school by the courts for the period of six months. This is but a farce. The school is a *reformatory*, not a *prison* or *penitentiary*. It is to educate, or *reform*, boys, not to *punish* them. And can it be supposed that a boy, such as I have described many of these to be, can be thoroughly reformed in six months? To ask the question is to indicate the only answer to it. If every boy were to be sent there for six months only, the school might as well be abolished at

once, as it would be almost wholly useless. The boy sent for that period, instead of feeling the necessity of reforming himself, that he might go out cleansed of his leprosy, and fit to hold up his head proudly among men, would be hourly thinking of the day, drawing nearer and nearer, when he should go out to his old haunts and companions, and enter again on his interrupted career of petty crime, soon, perhaps, to join a higher class of criminals. In the recommendation of the superintendent of the alteration of the law on this subject the board fully concur, and respectfully call your special attention to it.

Instead of one hundred and four inmates of the institution during the year, sixty being the greatest number that can be accommodated at one and the same time, it is to be regretted that we have not the means of accommodating four times that number, which would relieve our cities of their street-corner *infant schools* of vagrant, incorrigible, and malicious boys.

#### HOW THE BOYS ARE TREATED AND EMPLOYED.

Upon first coming to the school the boy expects to enter a prison of some kind, and be placed under harsh and severe keepers. With this impression, the kind and parental manner of the superintendent toward him is a puzzle; he is confounded; don't know what to make of it. He sees the boys whom he now joins, well-dressed, clean, cheerful, happy, and apparently free. But he cannot adapt himself at once to their humor and contentment; he thinks, and for a time, perhaps, "sulks;" meditates escape; sometimes, though rarely, effects it, and if he does, is soon brought back. Gradually, however, he falls into the ways of the school, labors cheerfully, plays with spirit and zest, becomes more and more docile, and finally begins to perceive the great benefit he is deriving from the school; hope dawns in his mind that he may yet be something better than an outcast, and he resolves to try to do the best he can. Arrived at this stage, he is in a hopeful condition, and if left in the school long enough will leave it, in the end, thoroughly reformed, and prepared to perform the part of a good and useful citizen.

*Kindness and employment* are the effective means of reforming boys. They must first be convinced that, no matter what they have done, or how bad they are, no resentment is felt toward them; that they are not to be *punished*. The great object is to make the new-comer realize that the whole desire of the superintendent, and all having charge of the school, is to improve him; that he is brought and kept there for his own good, and not to gratify any one's spite. This object once gained, the rest is comparatively easy.

The inmates of the school constitute a family, of which the superintendent, the matron, and their assistants, are the heads. All the forms and usages of a religious family are observed—family prayers, grace before meat, order, and propriety of behavior at table, where the superintendent and his wife preside.

Immediately after breakfast a portion of the school are sent into the field, if the weather is fair, to labor till noon; another portion go into the school-room to study their lessons, recite, &c. After dinner a short time is allowed for play, and then those in the school-room in the morning change places with the others, until supper, when they are given further time for recreation, after which, evening prayers and sleep.

Thus the boys are kept constantly employed, and have no time to think of mischief. They are well clothed and fed, and are taught, and required to observe, cleanliness; and by these means acquire a feeling of self-respect, which is highly important.

Regular Sabbath-schools are held on Sundays, and the boys commit and recite portions of scripture, sing, and go through other exercises. Several gentlemen have kindly visited the school on Sundays; and the board have to thank Dr. Carpenter, the representative of the Young Men's Christian Association, for the deep interest he has manifested in the spiritual welfare of the boys, his constant visits to the school on Sundays, and his earnest and useful labors to further the objects of the board. A report from him of his labors, and of the deportment and progress of the school, accompanies this, and is respectfully referred to.

The general improvement of the boys is very manifest to the board and to gentlemen who take interest enough in the institution to visit it occasionally. For this improvement and the great success of the school the board are indebted to the superintendent and his wife, who possess eminent qualifications for their position; who make their arduous and responsible duties a labor of love, and whose whole minds and energies are given to their self-imposed task. They deserve, and will receive, the grateful blessings of those whom they have rescued from a depraved and vicious life. Such services as they have rendered cannot be estimated in money-value, as no money could purchase them.

#### WORK UPON THE FARM—CROPS PRODUCED—IMPROVEMENTS MADE, ETC.

The report of the superintendent of the work done upon the farm, the crops produced and put in, the land cleared, and fences erected, to which we invite your attention, is very gratifying, and, indeed, surprising. It gives us reason to hope that in a year or two the school will be able to produce all the bread and provisions required for the support of the boys; and if there were accommodations for carrying on mechanical work in the winter, the boys could be profitably employed during the winter months, when out-door work ceases, thus helping still further to defray the expenses of their support. This in-door employment is as essential during the winter, as a means of reform, as out-door labor is in the spring, summer, and autumn. Whether their labor were profitable or not, the boys should never be suffered to be idle. Each one ought to be taught some mechanical trade, that he might hire himself as a journeyman, or set up the business on leaving the school. The idle boy is the devil's journeyman.

#### FAILURE OF APPROPRIATION BY CONGRESS.

You are aware that the bill making an appropriation for the expenses of the school for the current year, for reasons not necessary to refer to—but not because a majority of either House was opposed to it—failed to pass, and the board were left, comparatively, without the means to defray the expenses of the school. In this dilemma the board had to decide whether they would break up the school and turn the sixty-three boys then in it into the street, or send them back to the courts, some to be remanded to prison—the worst place they could be sent—or endeavor to carry on the school, in the best way they could, until relief could be obtained from Congress. To break up the school for a month or six months would be to destroy it altogether. This the board would not do if it were possible to carry it on. On being apprised of our dilemma several liberal-minded gentlemen, whose names we take pleasure in mentioning, generously offered to supply the school with such articles necessary for its support as they dealt in, and wait until Congress shall make an appropriation. These gentlemen are Mr. N. W. Burchell, Messrs. Hall & Hume, Wheatley & Brother, William Ballantyne, H.

W. Fisher, G. T. Dunlop, E. F. Simpson, William R. Riley, George Ryneal, Webb & Beveridge, Robert Ball, Daniel Simkins, and J. L. Savage.

To each of these gentlemen the board avail themselves of this opportunity to express their thanks. To Mr. H. D. Cooke the board also desire to express their appreciation of his permission to the superintendent to draw on him for funds necessary for incidental expenses, without having any on deposit. These generous acts have enabled the board to keep the school in successful operation through all their embarrassments.

The board had hoped to have obtained from the city of Washington the amount due by the city, \$3,345 80, for the support of boys sent to the school prior to the change of government, and \$1,034 08 which has accrued since that change. But they regret to say that not a dollar has been paid by the city since the school went into operation. Without an early appropriation by Congress, the board will be compelled to abandon the school.

#### HEALTH AND LOCATION.

The board regret to be compelled to report that much sickness has prevailed at the school during the usual malarial season. It is true no deaths have occurred; but they attribute this to the judicious management and prompt attention to each case of malarial fever by the superintendent, who, fortunately, has heretofore had much experience in diseases of this kind.

In locating the buildings for such an institution, salubrity and healthfulness should be the first inquiry, as they are of the very first importance. With the past year's experience before them the board most respectfully recommend that a new location be obtained, combining good soil, purity of air, and an abundance of good water. That portion of the Government farm at present occupied by the Reform School, and not needed for aqueduct purposes, might be sold, and with the proceeds and some additional funds a more suitable place could be purchased. For further information on this subject reference is respectfully made to the accompanying report of the physician to the school, Dr. Tyler.

In view of the great benefits which this community must derive from an institution of this kind, and also of those which must result from it as a model national institution, the board cannot but indulge an earnest hope that Congress will make provision for defraying the expenses of the school, and also for erecting buildings for it suitable to accommodate at least three hundred boys.

I have the honor to be, your obedient servant,

N. SARGENT,

*President of the Board of Trustees of the Reform School.*

HON. COLUMBUS DELANO,

*Secretary of the Interior*

---

#### REPORT OF THE SUPERINTENDENT.

*To the honorable Board of Trustees of the Reform School for the District of Columbia:*

GENTLEMEN: The following report of the institution over which you exercise a guardian care, and its progress, for the year ending October 5, 1871, is respectfully submitted.

It gives us pleasure in being able to report that our efforts for the

advancement of the school during the past year have been attended with gratifying results, and we believe much good has been accomplished. Kind Providence has seemed to smile upon us, and all our works have been blessed. It is true, the life of the Reform School teacher is beset with many trials, and is a life of toil and self-sacrifice; but the consciousness of being the instrument through whom even *one* wayward boy is raised from vice and misery to true and worthy manhood, is a sufficient reward for all deprivations of society, which are the necessary results of such a life, or hardships endured. We have had so many evidences of improvement and reform to cheer us that our duties have seemed light and joyous, and we labor on with the confident hope that not only one but many boys will be saved and restored to society. A neglected and outcast boy is sent to us, ignorant in letters, coarse and vulgar by nature, skilled or proficient in nothing but the slang of the street and trickery of the professional criminal. A new life is now opened to him; he is washed, fed, and clothed properly; is taught how to work; his mind is developed by the regular system of intellectual training, and he is taught from the Bible the way to Christ. With all these appliances his conscience is quickened and self-respect created; he feels that he no longer is an object of suspicion, but a being with an immortal soul, created for some noble purpose in life; he has experienced a change and is satisfied; a bad boy is saved and society is protected.

The number of boys remaining in the institution October 5, 1870, was forty-six; the number received from that date to October 5, 1871, was fifty-eight—making a total number in the school during the year of one hundred and four boys. The number discharged during the same period was thirty-eight. Twenty-seven went out by reason of expiration of term of sentence, two by reason of reformation, and nine to make room for boys committed by the courts. The law creating the House of Correction provides in section 8, that when any boy under sixteen years of age shall be found guilty in a court of the District of Columbia of any crime punishable by imprisonment other than imprisonment for life, he shall be committed to the said House of Correction. We would here recommend that the law be so amended as to require the court to give notice to the president of the board of trustees of such commitment, and await his order to forward the boy to the school; otherwise, when the institution is full it may be necessary to dismiss unreformed boys to make room for the new-comers; in fact, we have been compelled already to do this. We would also recommend that the law be so amended that all boys shall be committed until reformed or during their minority, giving the board discretionary power to discharge when in their judgment the best interests of the boy will be subserved by such dismissal. The school cannot be made purely a reformatory institution until the board of trustees have power to retain the boys until they are reformed. The reformation of a boy depends so much upon his own efforts, that the time necessary to secure it cannot be definitely estimated in advance. The length of time necessary for one boy to become reformed may not be the same as is required for that of another; therefore no particular space of time can be a safe rule in which the reformation of all may be secured. Our system is based upon a regular graded course, which all boys must pass over before their reformation is considered accomplished. It requires twelve months, with uniform success, to pass through the grades. Occasionally a boy will make all of his promotions in this time, and be entitled to his honorable discharge; but in the great majority of cases a much longer time is required. If, therefore, boys are sentenced for a shorter period than is necessary for their reformation, the object

for which the school was established is destroyed; hence we shall earnestly hope for the recommended amendments.

#### SANITARY CONDITION.

The health of the school has been very good during the year till within the last two months; within this latter period we have had many cases of chills and fever. The sickness has necessarily increased our cares and labors, and very much retarded the usual healthful operations of the school. In our opinion the institution will always be subject to these chills and fevers if allowed to remain in this locality. We would respectfully suggest to the board of trustees that, before permanent buildings are erected for the school, the healthfulness of the present location be thoroughly investigated. For further and explicit information on this subject we would refer you to the report of Dr. Tyler, the attending physician.

#### OUR LABORS ON THE FARM.

We have made every reasonable effort to produce a good supply of farm products. We have twenty acres of corn, which is excellent; five acres of potatoes that will average well; three acres of beans; two of vines, including melons, cucumbers, and squashes; also have a large vegetable garden. Our tables have been bountifully supplied during the summer with vegetables, and we shall also have a good supply for winter use. In addition to all this, we marketed some garden vegetables, which was a source of revenue to us. We harvested sixty-four bushels of wheat and ninety-four of oats; have seeded five acres with grass seed; have sown nine acres with winter wheat; have planted three acres with strawberry plants; also, have several hundred grape-vines set, and have one hundred budded peach trees of our own raising. We built eleven hundred and twenty-five feet of paling fence, besides repairing all the fences of the farm. We grubbed and cleared several acres of land, besides doing much labor in cleaning and clearing up the farm generally. The boys have manifested a commendable interest in all our farm labors. When a boy learns to work he learns to be self-supporting, which is a desideratum of no small importance with this class of unfortunate boys.

#### SHOP LABOR.

If room could be furnished and arrangements made by which shop labor could be introduced into the school, great good, we are sure, would result from it. It would give the boys an opportunity of learning a trade, would furnish labor for the winter season when boys cannot be profitably employed on the farm, and would, we are confident, prove remunerative.

#### SCHOOLS.

The efficiency of our schools has been greatly increased during the year. The teachers have been very faithful to the charge intrusted to them, and the boys have made commendable progress in all their studies. The majority of them are very ignorant when they come to us; but we are always pleased with the zeal with which they embrace every opportunity to acquire knowledge. We place much stress upon the intellectual training of the school, for as the mind is developed, there is generally a corresponding enlargement of the finer sensibilities of the heart.

## MORAL AND RELIGIOUS CULTURE.

Our efforts during the year to establish a sound, moral, and religious feeling among the boys have been assiduous, and we trust successful. The boys have been carefully instructed in the Scriptures, and many of them have committed large portions of the text to memory. For much of the success and interest felt in our religious meetings we are indebted to the kind gentlemen who have come to us regularly on the Sabbath to talk about and explain to us of the teachings of our Saviour. And especially are we indebted to Dr. Carpenter, who has visited us every Sabbath for so many months, and whose explanations have been so plain and convincing to the boys that many of them have been under conviction, and earnestly inquired the way to be saved. The prayer-meetings, conducted mostly by the boys, have been productive of great good, and have created a general religious feeling and interest among them. For a more comprehensive statement of the religious interest in the school, we would respectfully refer you to the report of Dr. Carpenter.

## MORE ROOM.

The institution has been very much crowded during the whole of the past year. The utmost capacity of our present building furnishes accommodations for only sixty boys, while we have had sixty-five the greater portion of the time, and should have had many more had there been room for them. We fondly cherished the hope that Congress would provide ample room for these unfortunate boys before this time. There is a demand for accommodations for at least two hundred and fifty boys; and what more profitable investment could be made than to appropriate at once for all the necessary buildings and appurtenances, and thus enable us to relieve the District of the growing element that is constantly preying upon its life and property? We hope at the next session of Congress the importance of our enterprise will be fully understood and appreciated, and our wants amply provided for. There is no place in the United States so fitting to erect a model reformatory as in the District of Columbia. Our present building is not comfortable, neither is it well calculated for the purposes for which it is used. The institution, in our opinion, should soon be abandoned, unless some provision is made to give it permanency, and make it worthy of a position at our nation's capital.

## CONCLUSION.

We can not conclude our report without referring to the kind feeling that has existed among the officers and employes of the school during the year. All have seemed to feel a common interest in laboring for the advancement and welfare of the boys; but especially would we thank the president, and all other members of the board of trustees, for their kind aid and constant co-operation in all our arduous duties. Your ever thoughtful consideration of the institution in all its interests, as well as manifest personal regard for myself and family, will ever be remembered with gratitude.

The following tables will present valuable information in a classified form:

F. W. HOWE,  
*Superintendent.*

#### REPORT OF DR. CARPENTER.

WASHINGTON, D. C., Sept. 22, 1871.

MY DEAR SIR: Having been called upon for a report of my labors at the Reform School, I have to say that Mr. F. W. Howe, superintendent, at the request of the president of the board, called at the rooms of the Young Men's Christian Association and requested the general secretary to send some one every Sabbath to the school to conduct religious exercises. I was requested to respond to the call, and did so cheerfully, but not without feeling the weight of responsibility attending such an undertaking. I did not lose sight of the Gospel commission, and of Him who gave it. I did not forget that it was written, "Not by might, nor by power," in the messengers, is the Gospel to accomplish its design, "but by My spirit, saith the Lord." And with these precious truths before me, I made my first visit, with General Harrington, on the

I had pictured to myself the class I should meet, and could see only a group of half-clothed, inattentive, disorderly boys, who thought of nothing but their former evil associations, and the day when they should be released and return to their old haunts of vice. I shall never forget the wonderful transformation of ideas that were wrought in my mind as Brother Howe ushered us into the school-room, where the boys were gathered. Bright, cheerful faces greeted us, all neatly clad, while perfect order reigned throughout the room. The service opened with singing, and as they united their clear, ringing voices in one of our sweet Sabbath-school songs, I was fully impressed with the idea that these boys were not really bad at heart, and that all they wanted was proper training to make them good and useful men. I saw at once, in your school, the needed system of reform, differing in character and principles from anything that I had, at that time, any personal knowledge of. And my heart went out in sympathy for the many hundreds of homeless, vicious, and worthless boys that throng our streets, devoid of moral teaching, home influence, and, without employment, to be trained to the worst of vices. A short scripture lesson was read, and short addresses made by General Harrington and myself, and as we tried to

impress on their minds that God is willing and anxious to save *all* who will consent to be saved, they gave us perfect attention; and I am free to say that I never witnessed such interest as they manifested, among the same number of scholars, in my life. I began from that day to study the wants of the school, and pray to God to show me how I could best advance the Kingdom of our Glorious Redeemer among those boys. Soon the glad tidings came to me that the boys had organized a prayer-meeting themselves, and requested permission to conduct the same every Wednesday night. This was readily granted, and this meeting has become one of the permanent exercises of the school. It is always led by one of the scholars, and the experiences given and the determinations made on those occasions have gladdened the hearts of those under whose immediate care they are. One I had the pleasure of attending—the Sabbath evening service, which is similar in character to the Wednesday night meeting. My heart was filled as I listened to the earnest prayers offered or the expressions of love for Jesus made by these boys. The most valuable adjunct to my undertaking is the Sabbath-school, conducted by Brother Howe on Sabbath morning before I arrive. A chapter is read and explained; the Lord's Prayer is repeated in concert, and the verses committed during the week are recited. This work is all well done, I know, because I frequently invite them to repeat these lessons, and they always do it with wonderful readiness. I have visited the school every Sabbath with three exceptions. I generally invite some one of our young men to accompany me, and all have united in the expression that the attention was such as they had never witnessed before among a like number of boys. There is, perhaps, no one thing that lends so much interest to a religious meeting as good singing, and this we have always had, as it is a part of the daily schooling, I believe, to practice Sabbath-school music. We have had some conversions, but to estimate results of the work is out of the question, for He who ordained His gospel to be the means of deliverance from guilt, power, and consequences of sin, whatever be the condition of the sinner, accompanies it with a power unknown to human philosophy, and makes it adequate to the end he has proposed. I do not believe that the reformation of the boys sent to the school is all that is accomplished by this institution, but the influence upon the children of our best citizens is beyond calculation. Every parent and philanthropist who desires the elevation and salvation of the rising generation should study this subject. I commend them to examine the working and results of the Reform School of the District of Columbia.

Gather them in—gather them in “from the stifling streets,” gather them in—these boys to whom the sunny gladness of childhood is denied; who are familiar with cold and hunger, with want and woe and vice; who know nothing of the sanctity of home and prayer, and the Sabbath day; who see nothing but the night side of life. Here is material that may be fashioned into forms of beauty; it is still plastic; it has not become hardened by exposure; it invites the molding hand. Be hopeful and believing, and cast thy bread freely on the waters, and thou wilt find it again after many days. Praying that God will give us greater manifestations of His “power to save” in the future than He has in the past, I leave the work with Him.

Respectfully,

J. E. CARPENTER.

Hon. N. SARGENT,

*President Board of Trustees Reform School,  
District of Columbia.*

## REPORT OF THE PHYSICIAN.

GEORGETOWN, D. C., *Sept.*

SIR: Since my report in October, 1870, the health of the inmates of the Reform School has been generally good, there being only a few accidental cases of illness, except prevalence of epidemic intermittent and remittent fever. As it is generally known that malarial fever occurs with severity as an epidemic only at intervals of some years, the intervening period presenting but few cases, and these of a mild type, I had supposed that we should not now have a recurrence of the severe forms of the fever of last year. This season has proved, however, much worse, there being more cases, and of a more dangerous character. The family of Mr. Howe, the superintendent, and most of the inmates of the school, have suffered intensely. Would it not be well, in view of the fact that whenever malaria prevails this locality is particularly influenced by it, to consider the propriety and practicability of changing the location of the institution before the erection of more permanent buildings, to one freed from malaria at all times? To erect them in the present location is to accept a perpetual evil which not only in many seasons will destroy the comfort and health of the inmates, but seriously affect the execution of the system adopted in the school for their benefit. Not only indoor studies and exercises are interrupted, but the work on the farm is greatly embarrassed. Mr. Howe can bear testimony to difficulties which have embarrassed him this season from the many cases of severe fever which have existed. There are locations more remote from the river, entirely freed from this influence. Owing mainly to the constant vigilance and attention on the part of Mr. Howe, no death has occurred during the year.

Very respectfully,

BOWIE TYLER, M. D.,  
*Attending Physician.*

HON. NATHAN SARGENT,  
*President of the Board of Trustees of the Reform School  
of the District of Columbia.*

## TREASURER'S REPORT.

## RESOLUTION OF THANKS.

At a meeting of the board of trustees of the Reform School of the District of Columbia, on the 12th October, 1871, the following resolution was unanimously adopted :

*Resolved*, That, highly appreciating the peculiar fitness of Mr. F. W. Howe, as superintendent of the Reform School, by reason of his experi-

ence in the management of boys ; his self-control and winning deportment ; his firmness, tempered by kindness ; his earnest desire to promote the true interests and welfare of those under his charge, both temporal and spiritual ; his excellent management of the farm and garden, as shown by their products ; his unwearied attention to, and judicious treatment of, the sick inmates, and his prudent efforts to preserve the health of the school, the board take pleasure in tendering him, and to Mrs. Howe, who has been an earnest co-laborer, their hearty thanks.

The board have also to thank Mr. Howe's two assistants, Mr. Mullin and Mr. Johnston, for their faithful labors.

**REPORT OF WARDEN OF THE UNITED STATES JAIL.**

---

---

# REPORT

## OF THE

### WARDEN OF THE UNITED STATES JAIL.

---

WARDEN'S OFFICE, UNITED STATES JAIL,  
*Washington, D. C., October 31, 1871.*

SIR: In compliance with an act of Congress approved February 29, 1864, I herewith submit my annual report as warden of the United States jail in the District of Columbia, for the year ending October 31, 1871.

I believe it to be my duty to make another effort to attract the attention of the Government to the great necessity which exists for a new jail in the District of Columbia. The building now in use is old and worn, and in point of strength, capacity, accommodations, and general arrangements, is scarcely suitable for the purposes to which it is devoted. It was built a generation ago, and previous to the dawn of the more humanitarian system of treatment of prisoners now generally approved, and its construction and general arrangements are not, therefore, in accord with the ideas of the present age. It is deficient in capacity. The growth of population in this District, and the consequent increase of the number of persons committed to the jail since it was built, have rendered the accommodations far too limited, and hence a constant overcrowding has become an evil which cannot be avoided. Besides, the arrangement of the building affords no opportunity for solitary confinement or the classification of prisoners beyond that of sex.

There is a want of proper means of ventilation in the cells and apartments, which is a serious obstacle to overcome, to secure the health and comfort of the inmates; besides, there are no water-closet accommodations in the building, nor are the cells or rooms connected in any manner with a sewer; hence each cell and room is, from necessity, furnished with night-tubs, in which the offensive excretions of the occupants are concentrated, and often necessarily retained several hours, giving forth their foul and nauseous gases to an extent which is not only disagreeable and offensive, but is calculated to depress the vital powers and generate disease. This evil I have endeavored to overcome by neutralization, through the use of disinfectants and the daily application of lime throughout the building, and whitewashing the cells and corridors. This method has proved of great value, and has accomplished the object desired to a considerable extent. Again, the building is faulty in point of construction and material; it is built of brick and mortar of poor quality. The mortar is not hard and substantial, but is of a crumbling nature, and does not adhere properly to the brick. Hence the penetration of the walls is made an easy matter, and the building itself really presents no reliable obstacle to prevent the escape of burglars and desperate characters, of whom there are constantly more or less incarcerated in it; consequently, a greater number

of guards is required than would otherwise be necessary to prevent the escape of prisoners. This considerably increases the annual expenses of the institution, and compels me to rely more upon the unceasing watchfulness of the guards for the safe-keeping of prisoners than upon the strength of the building.

The jail has been kept in repair so far as was necessary to preserve the building and render it serviceable, and a system of habitual cleanliness throughout the entire structure and premises has been vigilantly pursued during the year. It is now in as good condition in all respects as can reasonably be expected under the circumstances above enumerated; but to obviate the manifold objections to the present building, a new structure with the modern improvements and greater capacity and strength has become extremely desirable, if not absolutely indispensable.

In 1867 and 1868 escapes from the jail had become so frequent, and the prisoners so disorderly, as to attract the attention of the honorable Secretary of the Interior, who authorized my predecessor to appoint an additional number of guards to prevent such escapes, and also to so govern and control the prisoners as to prevent them from disturbing the peace and quiet of respectable citizens residing in the vicinity. The increased number of guards was continued until the past year. I reduced the number by abating two of the positions, and hope to be able to conduct the institution with the present reduced force.

I am gratified to be able to express my great indebtedness to Benton Russ, the deputy warden, and to each of the officers of the jail, for the prompt and faithful discharge of duties imposed, and the effective manner in which the rules for governing the institution have been carried into execution. Through their vigilance, good discipline has been uniformly maintained, and I have no escapes of prisoners to report during the year just closed.

The sanitary condition of the jail has been very gratifying; there has been but little sickness among the inmates—less, I believe, in proportion than among the citizens at large, and under the skillful treatment of Dr. Noble Young, the physician to the jail, those who were sick have been carefully attended, and for the most part restored to health. For a more detailed statement in regard to the sanitary condition of the jail and the health and condition of prisoners, your attention is respectfully called to the accompanying report of Dr. Noble Young, the physician to the jail.

No death from disease has occurred during the year.

The prisoners have been plentifully supplied with wholesome food of good quality, which was uniformly inspected by one of the officers of the jail before being received for use. The food has been carefully prepared by competent cooks employed for the purpose, and who also distribute the rations to the prisoners under the directions of one of the guards. We have no dining-room or other place where the prisoners can be assembled for their meals, and consequently the rations are necessarily delivered to the prisoners in the several corridors and rooms of the jail. The sick have been supplied with such rations, delicacies, and medicines as the physician to the jail has prescribed, and their condition appeared to require.

Religious services have been held regularly every Sunday. The Rev. Father Walter has been the spiritual instructor of the Catholic portion; the Protestant exercises have been conducted under the auspices of the Young Men's Christian Association of this city. Much good has been accomplished thereby.

Clothing has been furnished to those only who were destitute and had no means of procuring it themselves, and to such only a sufficient supply for their immediate wants. Each prisoner is furnished with a clean straw bed and a sufficient number of blankets for comfort, according to the season, and which have been kept clean and in good condition, and the straw frequently changed.

The entire expenditures on account of the jail during the year, exclusive of salaries, and including the cost of transportation of prisoners to Albany penitentiary and repairs, amount to \$15,758 62, which is much less than for many years. The expenditures have been as follows:

|                                                          |                   |
|----------------------------------------------------------|-------------------|
| Subsistence of prisoners .....                           | \$9, 196 20       |
| Medicines and delicacies for the sick .....              | 182 04            |
| Fuel and lights .....                                    | 1, 604 06         |
| Stationery, blanks, and blank-books .....                | 163 97            |
| Hard and tin ware .....                                  | 187 00            |
| Repairs .....                                            | 909 75            |
| Lime and disinfectants .....                             | 121 35            |
| Beds, bedding, and clothing .....                        | 1, 597 75         |
| Transportation of prisoners to Albany penitentiary ..... | 1, 516 02         |
| Horse-feed .....                                         | 195 13            |
| Night-tubs and wooden-ware .....                         | 85 35             |
| <b>Total .....</b>                                       | <b>15, 758 62</b> |

The salaries of the guards, physician, and employes for the year amount to \$23,723 99. The entire expenses are \$4,109 06 less than last year.

The daily average number of prisoners confined in the jail during the year was 124.

There were in jail at the commencement of the year—

|               |     |
|---------------|-----|
| Males .....   | 109 |
| Females ..... | 14  |

Received during the year—

|               |        |
|---------------|--------|
| Males .....   | 1, 151 |
| Females ..... | 184    |

**Total number in jail during the year .....** **1, 458**

Of whom there are now in jail—males, 73; females, 10.

Sent to penitentiary at Albany, New York—males, 34; females, 5.

Sent to reform school, District of Columbia—males, 40.

Executed—1 male.

Released—males, 1,112; females, 183.

Those received during the year were charged with offenses as follows:

|                                   | Male. | Female. |
|-----------------------------------|-------|---------|
| Murder .....                      | 8     | 2       |
| Accessory to murder .....         | 1     | 1       |
| Rape .....                        | 1     | ..      |

| Malicious trespass .....                    | 16    | ..      |

Of those convicted and sentenced as above stated, there were—

|                                                                                            |    |    |
|--------------------------------------------------------------------------------------------|----|----|
| Sent to the penitentiary at Albany, New York .....                                         | 34 | 5  |
| Sent to the reform school of the District of Columbia .....                                | 40 | .. |
| Sentenced to Albany penitentiary, and pardoned by the President of the United States ..... | 2  | .. |
| Executed .....                                                                             | 1  | .. |
| New trial granted .....                                                                    | 1  | .. |

and the remainder were sentenced to imprisonment in this jail.

Very respectfully, your obedient servant,

JOHN S. CROCKER,

Warden.

Hon. C. DELANO,  
Secretary of the Interior.

HOSPITAL DEPARTMENT, UNITED STATES JAIL,  
*Washington, October 31, 1871.*

SIR: I have the honor to report the condition of this department during the past year.

We have had more than the usual number of cases of disease incident to the daily bad habits of life of those who are committed to this prison. In addition, a greater number of cases of malarial disease, not engendered by any causes existing in or about this prison, but from causes prevailing throughout the District, and affecting the subjects before their admission here. One case of a prisoner under trial for murder terminated in a form of insanity, the result of great mental disturbance. I am happy to say that no death has occurred during the past year.

I hope that you will make another and more successful appeal to our authorities in behalf of this prison, the entire unfitness of which, for its objects, strikes every one who inspects it. Our cells are without any means of ventilation, without water-closets, and almost impossible to be heated uniformly in cold weather; being the only portion of the prison which is even comparatively safe, they are necessarily crowded almost continually, and but for the ceaseless care in removing all offal frequently from them and the proper use of disinfectants would become sources of disease. Another most efficient means of preserving the health of the inmates is found in the regularity of their meals and their hours of rest. My daily observation enables me to state that every prisoner receives more than an ample supply of sound, healthy, and substantial food, consisting of meat, fresh and salted, vegetables, fish, soups of different kinds, molasses, and bread which cannot be excelled in quality, or the means of preparation, both corn and wheaten; coffee and tea fit for the use of any one, and all served in clean vessels and in abundance.

Those who are sick and under my charge receive punctually every comfort which is ordered and every attention required. Their beds, made of straw in sacks, which is frequently changed, are clean and comfortable. At the same time abundant clothing, such as blankets, are furnished. I have never heard a complaint from a prisoner in regard to these matters, except an occasional preference for different kinds of food, more dictated by caprice than necessity. Wearing apparel is furnished to those who are destitute, suitable for the season. They have abundant means of cleanliness in a constant supply of fresh water for washing, bath-tubs and other means being supplied for that purpose.

When very sick, and the cells become unfit for them in that condition, they are transferred to more airy and better ventilated rooms, which, under ordinary circumstances, are used for women, and prisoners confined for trivial offenses or as witnesses, and not likely to attempt to escape, being so insecure as to offer very little resistance to a determined effort to escape. These must necessarily be confined to such subjects as are not anxious, and those who are unfitted by disease to make much effort.

Under proper restrictions, looking mainly to their safe keeping, the prisoners are allowed the use of the north yard for exercise in the open air every day, in such numbers as may be easily controlled by the guards on duty, thus affording an auxiliary means for the preservation of their health. This is never denied the sick, when advised by myself as physician to the institution.

When the character of the great majority of the prisoners who are confined here is taken into consideration, their vicious habits, filthy and diseased condition, the result of low and depraved appetites and pursuits, it is a matter of surprise that, when placed in such quarters,

more disease is not engendered. This surprise has been often expressed by medical men and others who have visited the prison, as well as our grand juries, who have repeatedly declared the building a nuisance. The only answer is to be found, as I have stated, in the judicious sanitary arrangements which have been established and faithfully carried into execution.

My thanks are due to yourself, sir, and the officers of the prison, for the faithful assistance which all have rendered cheerfully to me in the discharge of my duties as physician of the institution.

Very respectfully, your obedient servant,

N. YOUNG,

*Physician United States Jail, D. C.*

General JOHN S. CROCKER,

# TENTH ANNUAL REPORT OF THE BOARD OF METROPOLITAN POLICE.

---

DEPARTMENT OF METROPOLITAN POLICE,  
OFFICE OF THE BOARD, NO. 482 LOUISIANA AVENUE,  
*Washington, D. C., October 16, 1871.*

To the Honorable SECRETARY OF THE INTERIOR:

In accordance with the twenty-fourth section of the act of Congress entitled "An act to create a Metropolitan Police district of the District of Columbia, and to establish a police therefor," approved August 6, 1861, the Board of Police of the said District respectfully submit their tenth annual report of the condition of the police for the year ending September 30, 1871.

This force was organized and went into operation under the above-named act on the 11th day of September, 1861, and has consequently been in existence upward of ten years. Disloyalty on the part of the former force, want of satisfactory and effective police service, arising from the several distinct police organizations within the District, and prevalent lawlessness in our midst at that time, called the present force into being. Each of the above-named delinquencies arose from the partisan character of the service. Experience has demonstrated that, in all large cities, a police force organized under municipal regulations inevitably becomes partisan and inefficient, a result which must necessarily follow when men are selected on account of partisan service in the political contests of their localities. As a rule, effective ward politicians make very poor policemen. To avoid the appointment of inefficient men, and to remove the force as far as practicable from partisan influences in the discharge of their duties, has been the constant effort of the board. That they have succeeded in this purpose to a satisfactory degree, is believed. To have been loyal to our Government during the late rebellion has been the only political qualification required of an applicant for appointment upon the force. With few exceptions, the force consists of good men, who aim at a faithful discharge of duty; that every member of the force is not so, does not result from a lack of a studied and persistent effort to secure such men.

The physical condition, intelligence, habits, temper, and aptitude for police duty are the general qualifications examined into before selections are made for appointment upon the force. In order that the board may be satisfied upon these points, the applicant is required to produce a petition, signed by at least five respectable citizens, stating that they have been personally well acquainted with the candidate for at least two years; that he is "a man of good moral character, correct and orderly in his deportment, and not in any respect a violator of law or good order; that he is a man of sober, temperate, and industrious habits; that he is not addicted to the habitual use of intoxicating drink,

or other hurtful excesses." One of the signers to the petition for appointment is required to make an affidavit, in due form, to the truthfulness of the statement contained in the petition, and each signer pledges himself to make a similar affidavit if called upon to do so. The applicant is then subjected to a thorough examination by the board of surgeons as to his physical qualifications; if he is passed favorably upon by the surgeons, he is then required to appear before a committee of the board of police for inspection, and to answer, under oath, such questions as the committee see fit to propound; a record of the questions and answers is kept and filed. If the general appearance and intelligence of the applicant are favorable, and he has answered the questions propounded to him favorably, his name is then furnished to the major and superintendent, who, with the captain and inspector, make diligent inquiry regarding his moral character, general reputation, and associates. If the reports of these officers are favorable, the applicant may be appointed for a trial or probationary period of sixty days; and if, at the end of this probation, the appointee deports himself properly, and develops an aptitude to the performance of police duty, he is regularly commissioned as a member of the force.

The above is a brief summary of the precautions taken to secure worthy and efficient police officers. The efficiency with which the force has performed its duty will appear from the annual statistics of its operations, together with the comparative freedom of our community from disorder and crime.

#### THE FORCE.

The regular force, as at present constituted, consists of 238 men, as follows, viz:

|                               |            |
|-------------------------------|------------|
| Major and superintendent..... | 1          |
| Captain and inspector .....   | 1          |
| Lieutenants.....              | 10         |
| Sergeants .....               | 20         |
| Privates or patrolmen .....   | 200        |
| Detectives .....              | 6          |
| Total .....                   | <u>238</u> |

There are also in the employment of the board, under authority of law, the following officers, viz:

|                             |   |
|-----------------------------|---|
| Secretary of the board..... | 1 |
| Property clerk .....        | 1 |
| Clerks .....                | 3 |
| Surgeons.....               | 3 |
| Messengers.....             | 2 |

The board has also commissioned, as provided by law, 37 persons as additional privates, to do duty at various localities, at the expense of the parties making application for their appointment.

#### DISPOSITION OF THE FORCE.

At the central office, with duties extending throughout the entire District, the following officers are assigned, viz:

|                                                         |    |
|---------------------------------------------------------|----|
| The major and superintendent .....                      | 1  |
| The captain and inspector .....                         | 1  |
| One lieutenant in charge and six detectives.....        | 7  |
| One lieutenant in charge and ten sanitary officers..... | 11 |

For more perfect and thorough police surveillance, the District is divided into eight precincts, to each of which is assigned a lieutenant, sergeants, and privates, as follows:

|                                                                                 |       |
|---------------------------------------------------------------------------------|-------|
| First precinct.—One lieutenant, three sergeants, and twenty-two privates.....   | 26    |
| Second precinct.—One lieutenant, one sergeant, and twenty-one privates.....     | 23    |
| Third precinct.—One lieutenant, two sergeants, and twenty-one privates.....     | 24    |
| Fourth precinct.—One lieutenant, three sergeants, and twenty-one privates.....  | 25    |
| Fifth precinct.—One lieutenant, three sergeants, and twenty-seven privates..... | 31    |
| Sixth precinct.—One lieutenant, two sergeants, and twenty-two privates.....     | 25    |
| Seventh precinct.—One lieutenant, three sergeants, and thirty privates.....     | 34    |
| Eighth precinct.—One lieutenant, three sergeants, and twenty-six privates.....  | 30    |
|                                                                                 | <hr/> |
|                                                                                 | 238   |

#### INCREASE OF THE FORCE.

An increase of the number of the present force is absolutely required in order to perform effectively the duties devolving upon them. The population of the District is rapidly increasing and extending to hitherto unsettled districts. The population of Washington is fully one-third greater than when the present number of the force was authorized. With the present number a single policeman has from ten to twenty blocks or squares to patrol in many portions of the city, requiring a walk of between three and four miles in making one circuit of his beat. Under such circumstances it is not remarkable that depredations are committed, and the wonder is that many more complaints are not made than really occur.

To meet the present and immediate prospective wants of the service in this regard, an increase of the force to the extent of sixteen sergeants and fifty privates, or patrolmen, is earnestly recommended.

#### STATION-HOUSES.

There is a pressing need for several new station-houses. No additional accommodations of this kind have been provided since the last annual report. The efficiency of the force would be materially increased were there proper provisions for the comfort and health of the men at their respective stations. The sick-list would also largely diminish if upon relief from street-patrol duty after hours of exposure during inclement weather, warm and comfortable rooms were provided for the patrolmen.

There are, however, good reasons for anticipating relief in this respect when the District government shall have this subject fully presented to it for consideration.

#### DISCIPLINE OF THE FORCE.

In the enforcement of discipline and efficiency on the part of the force, charges have been preferred and trials accorded by the board in 92 cases resulting as follows, viz:

|                                                                      |       |
|----------------------------------------------------------------------|-------|
| Privates dismissed the force .....                                   | 20    |
| Privates reprimanded .....                                           | 16    |
| Sergeants reprimanded .....                                          | 1     |
| Fines imposed upon privates .....                                    | 6     |
| Sergeants reduced to the ranks .....                                 | 1     |
| Complaints against privates dismissed .....                          | 45    |
| Complaints against sergeants dismissed .....                         | 2     |
| Dropped from the rolls after a probationary trial of sixty days..... | 1     |
|                                                                      | <hr/> |
|                                                                      | 92    |

## LICENSES FOR THE SALE OF INTOXICATING LIQUORS.

There have been presented for the approval of the board 351 licenses to retail intoxicating liquors. Of this number 325 received the approval of the board and 26 were disapproved. Of the whole number presented for approval 308 were from Washington; 37 from Georgetown; and 6 from the county of Washington outside the two cities. Of the number approved, 284 were from Washington, 35 from Georgetown, and 6 from the county. The number applying for approval is 20 less than last year, and the number approved is 31 more than last year.

The board again recommends that legal provisions be made for more summary proceedings against persons who engage in the illicit sale of intoxicating liquors. The punishment of persons engaged in this pernicious traffic is seldom reached through the ordinary proceedings of our courts. Nothing less than a seizure and destruction of liquors kept for illegal sale, and the closing of the house where it is carried on, will effectually suppress this traffic.

## POLICE TELEGRAPH.

There have been transmitted by the police telegraph 24,616 messages, of which a record has been kept at the central office; beside probably an equal number which have been passed between different police stations of which no record has been made. Through the agency of this telegraph 154 lost children have been restored to their parents; 185 estrayed or stolen animals have been recovered; 74 vehicles have been similarly disposed of; 577 dead animals have been reported to the sanitary police; 24 alarms of fire have been given; and the coroner has been notified that his services were needed in 57 cases. It is the intention of the board to place new and improved instruments in the several stations in the place of those now in use, which have become very much impaired from constant use. The manufacturer has the new instruments nearly completed, and it is expected they will be ready for use within a few weeks.

## DETECTIVE CORPS.

The following is a summary of such of the operations of the detective corps as can be made a matter of record. The greater portion of their work is of such a nature that it cannot be made to appear in a report of their duties performed :

|                                                                 |             |
|-----------------------------------------------------------------|-------------|
| Number of robberies reported .....                              | 361         |
| Number of arrests made .....                                    | 296         |
| Amount of property reported lost or stolen .....                | \$25,790 29 |
| Amount of property recovered .....                              | 13,948 78   |
| Amount of property turned over to property clerk .....          | 7,759 05    |
| Amount of property taken from persons and returned to same..... | 7,980 76    |
| Amount of property turned over to owners .....                  | 6,188 73    |

In addition to the amount of lost or stolen property reported above as recovered by the detectives, \$8,144 35 were recovered by precinct officers, and \$10,020 were recovered by the owners.\*

For a statement of the operations of the force in detail, reference is made to the documents appended hereto, viz:

1. Report of the major and superintendent.
2. Report of Lieutenant Noonan, in charge of sanitary company.

---

\* Large amounts of money and property have been recovered, the loss of which was never reported.

3. Treasurer's report.
4. Property clerk's report.
5. Report of board of surgeons.

I have the honor to be, sir, very respectfully, your obedient servant,

## RECAPITULATION.

The following is a recapitulation of the work done by the police force during the year ending September 30, 1871, a more extended exhibit of which will be gathered from the foregoing tables.

The whole number of arrests during the year has been 11,462; of which 9,482 were males, 1,980 females, 4,310 were married, 7,152 were single, 7,035 could read and write, 4,427 could not read and write.

The offenses may be classified as follows:

Offenses against the person, 6,377 males, 1,413 females.

Offenses against property, 3,105 males, 567 females.

Of the cases reported the following dispositions have been made: 4,902 were dismissed, 15 were turned over to the military, 1,277 were sent to jail, 792 have been committed to the work-house, 188 gave security to keep the peace, 77 were sent to the reform school, 43 not disposed of, and in 557 cases various light punishments have been inflicted, and they have been classed under the head of miscellaneous.

Fines have been imposed in 3,611 cases, amounting in all to \$33,879 32.

DEPARTMENT OF METROPOLITAN POLICE,  
Sanitary Office, Washington, D. C., October 1, 1871.

SIR: I have the honor to transmit to you herewith my annual report of the operations of the sanitary company for the year ending September 30, 1871:

You will please find in the accompanying tables the number and dis

position of nuisances reported at the central office, the number and condition of steamboats plying to and from the ports of Georgetown and Washington, the number and condition of steam-boilers in use within the District, together with various other duties, including those performed for the board of health.

It affords me much pleasure to state that the health of the city and District has been tolerably good, and, with the exception of three cases of small-pox, no other infectious or epidemic disease has come to the notice of the sanitary officers during the year. It is observed, however, that fevers and other local diseases have been prevailing to a considerable degree among the residents of the city bordering the marshes of the Potomac River, and the low grounds in the northern and eastern sections, and not unfrequently in the vicinity of the open public sewers within the thickly populated localities. Hopes are entertained that, under the judicious legislation of our new District government, speedy measures will be taken to remove as far as practicable the causes of disease which periodically visit the environs of our national metropolis.

For a brief period in the early part of summer apprehension was felt that some epidemic disease would make its appearance, in consequence of the neglected sanitary condition of the city, which was principally attributable to the transformation of our local government; but these forebodings on the part of the citizens were of short duration, for as soon as Governor Cooke was informed through this department of the anxiety to preserve the health of the city and District, orders were immediately issued by him to thoroughly cleanse the streets and alleys of the city, and these orders were promptly carried out under the supervision of the board of health and the sanitary officers.

Again I take the liberty of calling your attention to the act of Congress governing the sanitary company, and request that you ask its speedy amendment. The following paragraph is quoted from my last annual report, viz:

Under the law as it is at present, no penalty is prescribed for offenders, and, consequently, they go unpunished in almost every instance where opposition is made; and the result is that glaring nuisances continue to be committed, thus endangering the lives and property of our citizens.

In this connection it may be well to state that under the present laws of the District the sanitary officers have no power to enter premises, if objection is made, in the performance of their duties. This certainly is not in accordance with the progressive spirit manifested by our citizens for the improvement of the city; more especially when the ravages of cholera in Europe, and the presence of yellow fever to an alarming degree in our neighboring cities gives warning of the necessity of using precautionary measures to preserve, as far as possible, the health of the city.

The protection of the public health being the main object held in view by Congress in the enactment of the law creating a sanitary company, it is obvious in the enforcement of that law that no obstacle should remain to impede the officers in its full execution. It is therefore of vital importance in the preservation of public health that a new code of sanitary laws be enacted, which will give ample power and authority to the officers for the speedy removal of nuisances, and also protect them from the taunts and insults to which they are often subjected while in the performance of these important duties.

With regard to the condition of small tenement houses, occupied by the poorer class of people of the city, in many instances the occupants are so very poor that the officers are powerless to enforce the law against

them for violations of sanitary regulations. It is believed that if laws were enacted holding landlords responsible for the cleanliness and proper ventilation of these tenement houses, it would result most favorably in the preservation of the public health. It may be said by the landlord or owner that the tenant should be held responsible for the sanitary condition of his premises, which is true in a great measure, but the owner should be made to provide accommodations necessary for the health and comfort of his tenant.

There has been no perceptible change in the condition of the slaughter-houses and bone and fat-boiling establishments within the city limits during the year. Some of these establishments are located in thickly populated sections, and in close proximity to some of our public buildings. The offensive exhalations emitted from these establishments are frequently the cause of complaint, and the public good demands that speedy steps be taken to place them a reasonable distance beyond the city limits.

The amount of duty performed by the sanitary officers during the year has been very large, and cannot be too highly commended. Though laboring under many disadvantages, they have accomplished all that was expected of them.

During the past summer, the members of this company, in addition to the duties required of them by this department, have performed a large amount of work for the board of health in the investigation of complaints from citizens and in serving notices. It is evident that should the officers of the sanitary company be kept thus employed, its numbers will have to be increased in order to execute effectively the duties now crowding this branch of the department.

Respectfully submitted.

CORNELIUS NOONAN,  
*Lieutenant.*

A. C. RICHARDS,  
*Major and Superintendent.*

---

*Statistical record of nuisances, &c., for the year ending September 30, 1871.*

|                                                                 |               |
|-----------------------------------------------------------------|---------------|
| Number of nuisances reported at central office by officers..... | 8, 158        |
| Number of nuisances reported at central office by citizens..... | 98            |
| Total .....                                                     | <u>2, 256</u> |
| Written notices served .....                                    | 2, 219        |
| Nuisances abated on verbal notice by the officers.....          | 6, 037        |
| Total .....                                                     | <u>8, 256</u> |

Those nuisances for which written notices have been served may be classified as follows, viz:

|                                                         |     |

DEPARTMENT OF METROPOLITAN POLICE,  
PROPERTY ROOMS, NO. 482 LOUISIANA AVENUE,  
Washington City, D. C., October 12, 1871.

SIR: I respectfully submit the accompanying statement, (marked A,) showing the receipts at this office of property and money during the year ending the 30th ultimo, valued at \$27,277 82, of which \$18,922 72 were returned from the precincts, and \$8,355 10 from the detective corps.

During the same time there have been delivered from this office to owners' on orders of the courts and upon evidence of ownership, amounts equal to \$23,656 40.

The further statement (marked B) exhibits the value of property taken into the possession of the Metropolitan Police within the same period, and returned to owners or others than this office, as compiled from the weekly returns from the several lieutenants of police, equal to \$87,938 95. The total value of property recovered by the department during the year was, therefore, \$115,216 77.

The net proceeds derived from the sale of unclaimed and abandoned property, and which has been paid over upon the receipts of the treasurer of the board, amount to \$251 21.

Very respectfully, your obedient servant,

GEORGE R. HERRICK,  
*Property Clerk.*

WILLIAM J. MURTAGH, Esq.,  
*President Board of Police.*

A.

*Statement of the estimated value of property and money received at and delivered from the office of the property clerk during the year ending September 30, 1871.*

SURGEONS' DEPARTMENT, METROPOLITAN POLICE,  
Washington, D. C., October 16, 1871.

SIR: The board of surgeons of the Metropolitan Police district of the District of Columbia respectfully submit their annual report for the year ending September 30, 1871, showing the number of cases that have been under medical treatment; the nature of the diseases and the result of treatment; the average time lost on account of sickness, and the number of deaths in the force during the year.

The following table will show the number of cases treated, and the number of days lost by sickness, during each month of the year:

| Date.                | Number of cases treated. | Number of days lost. |
|----------------------|--------------------------|----------------------|
| October, 1870.....   | 50                       | 297                  |
| November, 1870.....  | 45                       | 259                  |
| December, 1870.....  | 36                       | 252                  |
| January, 1871.....   | 32                       | 327                  |
| February, 1871.....  | 39                       | 201                  |
| March, 1871.....     | 64                       | 469                  |
| April, 1871.....     | 39                       | 260                  |
| May, 1871.....       | 46                       | 292                  |
| June, 1871.....      | 52                       | 323                  |
| July, 1871.....      | 42                       | 271                  |
| August, 1871.....    | 42                       | 225                  |
| September, 1871..... | 41                       | 267                  |
| Total.....           | 548                      | 3,434                |

*Classification of diseases.*—Abscess, asthma, bilious fever, bronchitis, boils, colds, convulsions, chills, cholera-morbus, diarrhœa, diphtheria, dysentery, derangement of the liver, stomach, and bowels, erysipelas, gastric fever, hemorrhage of the lungs, bowels, and bladder, indigestion, intermittent fever, injuries received on duty, inflammation of the eyes, face, glands, throat, hands, and feet, irritation of the spine, neuralgia, nervous prostration, pneumonia, piles, pleurisy, rheumatism, and ulceration.

There has been but one death among the members of the force since our last report, that of Lieutenant A. Tait, of the fifth precinct, who died from the effects of an old injury of the head.

The average loss of time from actual sickness has been, during the year,  $6\frac{13}{274}$  days to each case treated. Percentage of time lost by sickness is  $1\frac{1}{17}\frac{23}{17}$  per cent.

The suggestions contained in our last annual report in relation to station-houses remain unchanged.

We are, sir, very respectfully, your obedient servants,

W. G. H. NEWMAN, M. D., *First District.*

JOHNSON ELIOT, M. D., *Second District.*

S. A. H. MCKIM, M. D., *Third District.*

A. C. RICHARDS, Esq.,

*Major and Superintendent Metropolitan Police.*
